

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

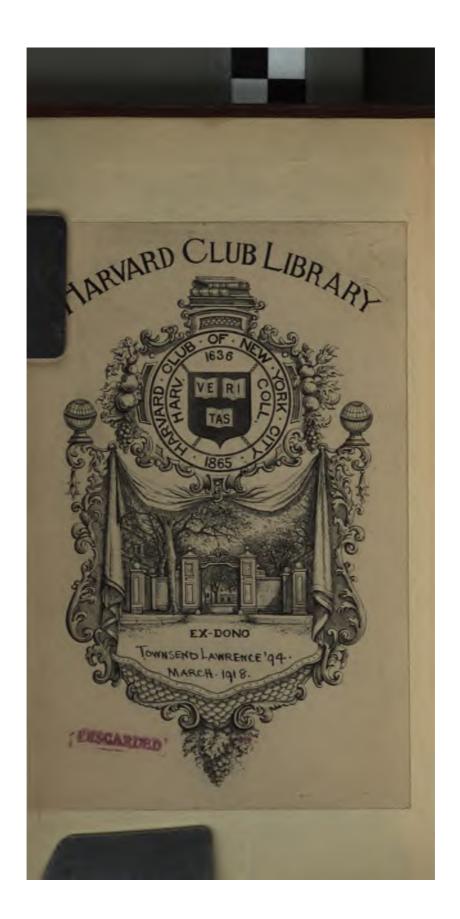

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

HISTORY

OF THE

British Settlements in America.

SITUATION AND EXTENT.

THE British dominion in America extending over a tract of country called, for the purpose of distinction, by the general name of British America, comprehends the vast and unknown extent of country, bounded south, by the United States of America, and the Atlantic ocean; east, by the same ocean and Davis's Straits, which divide it from Greenland; extending north to the northern limits of the Hudson's Bay charter: and westward to an unknown extent—lying between 42° 30' and 7° north latitude; and between 50° and 105° west long, from Greenwich; and between 25° east and 30° west long, from Philadelphia.

It is divided into four provinces, viz. 1. Upper Canada;—
2. Lower Canada, to which is annexed New Britain, or the country lying round Hudson's Bay, and the Island of Cape Breton;—3. New Brunswick;—and 4. Nova Scotia, to which is annexed the Island of St. John's.—Besides these there is the Island of Newfoundland, which is governed by the admiral for the time being, and two lieutenant governors, who reside at Placentia and St. John's.—The troops stationed at Newfoundland, however, are subject to the orders of the Governor-general of the four British provinces.—Of each of these provinces our intention is to enter into a brief description.

Vol. IV.

PROVINCES

OF

UPPER AND LOWER CANADA.

SITUATION, EXTENT, AND BOUNDARIES.

The provinces of Upper and Lower Canada, conflituted by all of pullament in 1791, companies the territory heretofore called and 50° north latitude, at London: or 14° cast, from Philadelphia. Their length is about fix hund and fifty.

These provinces are bounded on he north, by New Britains on the cast, by the Gulph of St. vrence, and part of the Province of New Brunswick; on the south-east and south, by the district of Maine, New Hampshire, Vermont, New-York, and the lakes: the western boundary is undefined. The Province of Upper Canada is the same as what is commonly called the Upper Country. It lies north of the great lakes, between the latitudes of 42° 30' and 50°, and is separated from New York by the river St. Lawrence, here called the Cataraqui, and the Lakes Ontario and Eric.

Lower Cambin lies on both fides the river St. Lawrence, between 61° and 71° W. Ion. from London; and 45° and 52° N. Iat. and is bounded fouth by New Brunfwick, Maine, New Hampfhire, Vermont, and New York; and west by Upper Cambi.

The line which divides Upper from Lower Canada commences at a stone boundary, on the north bank of the lake St. Francis, at the cove, west of Polate an Boasia, in the limit between the township of Lancaster and the Seigneurie of New Longuevil, rouning along the said limit in the direction of north thirty-four degrees west, to the westernmost angle of the said Seigneurie of New Longuevil; thence along the north-western boundary of the Seigneurie of Vandreuil, running north, twenty-five degrees east, until it strikes the Ottawas river; to ascend the said river into the lake Touriscanning; and from the head of the said lake by a line drawn due north, until it strikes the boundary line of Hudson's Bay, or New Britain. Upper Canada, to include all the territory to the westward and southward of the said line, to the utmost extent of the country known by the name of Canada.

AIR AND CLIMATE.

The climate is not very different from that of the New-England States; but as it is farther from the sea, and more to the northward than most of them, the winters are more severe. Winter continues with such severity from December to April, as that the largest rivers are frozen over, and the snow lies commonly from four to six seet deep during the whole of that time. But the air is so serene and clear, and the inhabitants to well desended against the cold, that this season is neither unhealthy nor unpleasant. The springs open suddenly, and vegetation is surprisingly rapid. The summer is delightful, except that a part of it is extremely hot.

HISTORY OF ITS SETTLEMENT, &c.

Canada was undoubtedly discovered by SEBASTIAN CABOT. the famous Italian adventurer, who failed under a commission from Henry VII. But though the English monarch did not think proper to make any use of the discovery, the French quickly attempted; we have an account of their fishing on the banks of Newfoundland, and along the fea coast of Canada, in the beginning of the fixteenth century. About the year 1505, one Denys, a Frenchman, drew a map of the gulph of St. Lawrence; and two years after, one Aubort, a thip-matter of Dieppe, carried over to France some of the natives of Canada. As the new country, however, did not promife the same amazing quantities of gold and filver produced by Mexico and Peru, the French for some years neglected the discovery. At last, in the year 1523, Francis I. a fentible and enterprising prince, sent four ships, under the command of Verazani, a Florentine, to profecute discoveries in that country. The particulars of this man's first expedition are not known. we can learn is, that he returned to France, and next year he undertook a second. As he approached the coast, he mee with a violent storm; however, he came to near as to perceive the natives on the shore, making friendly figns to him to land. This being found impracticable, by reason of the surf upon the coult, one of the failors threw kimielf into the tea; but, endeavouring to fwim back to the ship, a surge threw him on fore without figns of life. He was, however, treated by the matives with fuch care and humanity, that he recovered his drength, and was allowed to fwim back to the ship, which immediately returned to France. This is all we know of Verazani's second expedition. He undertook a third but was more heard of, and it was thought that he and all his compay perished before he could form any colony.

GENERAL DESCRIPTION OF

In 1534, one Jaques Cartier, of St Maloes, set sail under a commission from the French king, and on the 10th of May arrived at Cape Bonavista in Newfoundland. He had with him two small ships besides the one in which he sailed. He cruifed along the coasts of that island, on which he discovered inhabitants, probably the Eskimaux. He landed in several places along the coast of the Gulf, and took possession of the country in the king's name. On his return, he was again tent out with a commission, and a pretty large force; he returned in 1535, and passed the winter at St. Croix; but the season proved fo tevere, that he and his companions must have died of the fourvy, had they not, by the advice of the natives, made use of the decoction of the tops and bark of the white pines. As Cartier, however, could produce neither gold nor filver, all that he could say about the utility of the settlement was difregarded: and in 1540, he was obliged to become pilot to one M. Roberval, who was by the French king appointed viceroy of Canada, and who failed from France with five veffels. Arriving at the Gulf of St. Lawrence, they built a fort; and Cartier was left to command the garrison in it, while Roberval returned to France for additional recruits to his fettlement. At last, having embarked in 1549, with a great number of adventurers, neither he nor any of his followers were heard of more.

This fatal accident fo greatly discouraged the court of France, that for lifty years no measures were taken for supplying with necessaries the lettlers that were left. At last Henry IV. appointed the Marquis de la Roche lieutenant-general of Canada and the neighbouring countries. In 1598 he landed on the Itle of Sable, which he abturdly thought to be a proper place for a fettlement, though it was without any port, and without product except briars. Here he left about forty malefactors, the refuie of the French jails. After cruizing for some time on the coast of Nova Scotia, without being able to relieve these poor wretches, he returned to France, where he died of a broken heart. His colony must have perished, had not a French ship been wrecked on the illand, and a few sheep driven upon it at the same time. With the boards of the ship they excited huts; and while the sheep lasted they lived on them, feeding afterwards on fish. Their clothes wearing out, they made coats of feal-fkins; and in this milerable condition they tpent leven years, when Henry ordered them to be brought to France. The king had the curiofity to fee them in their feal-fkin dreffes, and was to moved with their appearance, that he forgave them all their offences, and gave each of them fifty crowns to begin the world anew.

In 1600, one Chauvin, a commander in the French navv. attended by a merchant of St. Malo, called Pontgrave, made a voyage to Canada, from whence he returned with a very prostable quantity of furs. Next year he repeated the voyage with the same good fortune, but died while he was preparing for a third. The many specimens of profit to be made by the Canadian trade, at last induced the public to think favourably of it. An armament was equipped, and the command of it given to Pontgrave, with powers to extend his discoveries up the river St. Lawrence. He failed in 1603, having in his company Samuel Champlain, who had been a captain in the navy, and was a man of parts and spirit. It was not, however, till the year 1608, that the colony was fully established. This was accomplished by founding the city of Quebec, which from that time commenced the capital of all the lettlements in Canada. The colony, however, for many years continued in a low way, and was often in danger of being totally exterminated by the Indians. As the particulars of these wars, however, could neither be entertaining, nor indeed intelligible, to many of our readers, we choose to omit them, and in general observe. that the French not only concluded a permanent peace with the Indians, but so much ingratiated themselves with them, that they could, with the greatest ease, prevail upon them at any time to murder and scalp the English in their settlements. These practices had a confiderable fhare in bringing about a war with France, when the whole country was conquered by the British in 1761; and at the treaty of Paris, in 1763, was ceded, by France, to the crown of England, to whom it has ever fince belonged.*

FACE OF THE COUNTRY, PRODUCE, &c.

Though the climate is cold, and the winters long and tedious, the foil in general is very good, and in many parts extremely fertile; producing many different forts of grains, fruits, and vegetables. The meadow grounds, which are well watered, yield excellent grafs, and breed vast numbers of great and small cattle. The uncultivated parts are a continued wood, composed of prodigious large and losty trees, of which there is such a variety of species, that even of those who have taken most pains to know them, there is not perhaps one that can tell half the number. Canada produces, among others, two sorts of pines, the white, and the red; four forts of firs; two sorts of cedar

Ter a more particular history of this country the reader is referred to Charsix's history of it; to the Encyclopedia Britannica; articles, Canada, Quea and America, No. 195, 200, and 207.

and oak, the white and the red; the male and female maple; three firts of affi trees, the free, the mungrel, and the baftard; three forts of walnut trees, the bard, the loft, and the smooth; vast numbers of beach trees and white wood; white and red elins, and poplars. The lindians bollow the red elims into canoes, some of which made out of one piece will contain twenty persons; others are made of the bark; the different pieces of which they sew together with the inner rind, and daub over the seams with pitch, or rather a bituminous matter resembling pitch.

with the test of the kear dearest the rivers

St. Lawrence and St. Charles, or the Little River, about three hundred and twenty miles from the sea. It is built on a rock, partly of marble, and partly of slate. The town is divided into an upper and lower. The houses in both are of stone, and built in a tolerable manner. The fortifications are strong, though not regular. The town is covered with a regular and beautiful citadel, in which the governor resides. The river, which from the sea hither is four or five leagues broad, marrows all of a sudden to about a mile wide. The haven, which lies opposite the town, is safe and commodious, and about sive fathoms deep. The harbour is slanked by two bastions, that are raised twenty-sive feet from the ground, which is about the height of the tides at the time of the equinox.

From Quebee to Montreal, which is about one hundred and feventy miles, in failing up the river St. Lawrence, the eye is entertained with beautiful landscapes, the banks being in many places very bold and scep, and shaded with lofty trees. The farms lie pretty close all the way, several gentlemens' houses, neatly built, shew themselves at intervals, and there is all the appearance of a slourishing colony; but there are sew towns or villages. It is pretty much like the well settled parts of Virginia and Maryland, where the planters are wholly within themselves. Many beautiful islands are interspersed in the channel of the river, which have an agreeable effect upon the eye. After passing the Richelieu islands, the air becomes so mild and temperate, that the traveller thinks himself transported to another climate; but this is to be understood only of the summer months.

TROIS RIVIERES.

The town called Trois Rivieres, or the Three Rivers, is about half way between Quebec and Montreal, and has its name from three rivers which join their currents here, and fall into the river St. Lawrence. It is much referted to by feveral nations of Indians, who, by means of these rivers, come hither and trade with the inhabitants in various kinds of furs and skins. The country is pleasant, and fertile in corn, fruit, & and great numbers of handsome houses stand on both sides the river.

MONTREAL.

Montreal stands on an Island in the river St. Lawrence, which is ten leagues in length, and four in breadth, at the foot of a mountain which gives name to it, about half a league from

the fouth shore. While the French had possession of Canada, both the city and island of Montreal belonged to private propeietors, who had improved them so well, that the whole island had become a most delightful spot, and produced every thing that could administer to the conveniencies of life. The city forms an oblong square, divided by regular and well-formed streets; and when taken by the English the houses were built in a very handsome manner; and every house might be seen at one view from the harbour, or from the southernmost side of the river, as the hill on the side of which the town stands falls gradually to the water. This place is surrounded by a wall and a dry ditch; and its fortifications have been much improved by the English. Montreal is nearly as large as Quebec, but since it sell into the hands of the English it has suffered much by sires.

The principal towns in Upper Canada are Kingston, on Lake Ontario, Niagara, between Lake Ontario and Lake Erie, and Detroit, situated on the western bank of Detroit river, between Lake Erie and Lake Huron, and nine miles below Lake St. Clair.*

POPULATION.

Upper Canada, though an infant fettlement, is faid by fome to contain forty thousand, by others, only twenty thousand inhabitants. The truth probably is between them. Lower Canada, in 1784, contained one hundred thirteen thousand and twelve souls. Both provinces may now contain about one hundred and sifty two thousand souls, which number is multiplying, both by natural increase and by emigrations.

RELIGION.

About nine tenths of the inhabitants of these provinces are Roman Catholics, who enjoy under the present government the same provision, rights, and privileges, as were granted them in 1774, by the act of 14th of George III. The rest of the people are Episcopalians, Presbyterians, and a few of almost all the different sects of Christians.

TRADE.

The commodities required by the Canadians from Europe are, wine, or rather rum; cloths, chiefly coarle; linen; and wrought iron. The Indian trade requires rum, tobacco, a fort of duffil blankets, guns, powder, balls, and flints, kettles; hatchets, toys,

Niagara and Detroit, though at prefent in possession of the British government, contrary to the treaty of peace, are, without any possible doubt, both within the limits of the United States.

and trinkets of all kinds. While the country was in possession of the French, the Indians supplied them with poultry; and the French had traders, who, like the original inhabitants, traterfed the vaft lakes and rivers in canoes, with incredible induftry and potience, carrying their goods into the remotest parts of America, and among nations entirely unknown to us. Thele un brought the furs, &c. home to them, as the Indians were thereby habituated to trade with them. For this purpole, people from all parts, even from the diffance of one thousand miles, came to the French fair at Montreal, which began in June, and foretimes lasted three months. On this occasion many folemnities were observed, guards were placed, and the governor affifted to preserve order in so great and various a concourse of lavage nations. But fometimes great diforders and tumults happened ; and the Indians frequently gave for a dram all that they were polleffed of. It is remarkable, that many of these nations actu-ally passed by the then English settlement of Albany in New-York, and travelled two hundred miles further to Montreal, though they could have purchased the goods they wanted cheaper at the former.

Since Britain became possessed of Canada, her trade with that country has generally employed from thirty to forty ships, and about four thousand seamen.

The amount of the exports from the province of Quebec, as far back as in the year 1786, was three hundred forty-three thousand two hundred and fixty-two pounds, nineteen shillings and fix-pence. The amount of imports in the same year was three hundred twenty-five thousand one hundred and fixteen pounds. The exports confisted of wheat, slour, biscuit, slox-feed, lumber of various kinds, sish, potash, oil, ginteng and other medicinal roots, but principally of furs and principally, to the amount of two hundred eighty-five thousand nine hundred and seventy-seven pounds.* The imports

Sould America infift (as no doubt she will) on Great Britain surrendering the fronts, and those lands and settlements which she has hitherto held in the most foleinn treaties, there cannot remain a doubt but nine-the fur trade, will pass into the hands of the Americans. This will most severe blow to the Canadian commerce, as well as to the restriction, while the Americans, grown wife by experience, fend-the direct to France, Germany, &c. instead of causing them to pass to the lands of British merchants and brokers, will be about to additional profit of from thirty to fifty per cent, between themselves.

confifted of rum, brandy, molaffes, coffee, fugar, wines, to-bacco, falt, chocolate, provisions for the troops, and dry goods.

GOVERNMENT.

By the Quebec act, passed by the parliament of Great Britain in the year 1791, so much of the act of the 14th of George III. passed in the year 1774, as relates to the appointment of a council for the government of the province of Quebec, is re-

shall be within each of the

nada, a Legislative Council,

confent of the Governor, power to make laws. The

ajefty's affent to bills paffed

y, or referve them for his

pecled; and it is ena provinces of Upper and an Affembly, v appointed by the K governor may give on by the legislative counc majefty's pleasure. majefty's affemt is fig must be figuified within

majesty's pleasure. The to have no force till his majesty's affent is fig vernor, which, to be valid, must be signified within two parts from the time the bill is preferred to the governor. The governor must transmit to the fecretary of state copies of such bills as have been affented to, which his Majesty in council may declare his disallowance of within two years from the receipt.

The Legislative Council is to confist of not fewer than seven members for Upper, and sifteen for Lower Canada, to be summoned by the Governor, who must be authorized by the King. Such members are to hold their tests for life, unless for seited by sour years continual absence, or by swearing allegiance to some foreign power.

The House of Assembly is to consist of not less than fixteen members from Upper, and not less than fifty from Lower Canada, chosen by the frecholders in the several towns and

felces and the merchants of those countries.—A profit which is now exclusively enjoyed by British subjects, or forcigners redding in Great Britain, as intermediate agents; but, it may be said, that the searcity of species in America, and their great domaid for English manufactures, will secure the fur trade to Great Britain—dash, however, should remember, that the rap 4 progrets of manufactures in the United States, aided by the present spirit of emigration in Europe, will four bishes there aided by the present spirit of emigration in Europe, will four bishes the a market which will rapidly mercase their species sufficient to enable them to a market which will rapidly mercase their species sufficient to enable them to range the European and other markets with that advantage which the British merchant has long experienced almost without a rival—ladead, it is impossible to consider the rapid advances which America has made since her independence, without at the time time being convinced, that initiad of drawing her supplies of manufactured goods from Great Britain, she will, er'e long, become her rival in the most important articles in almost every other European market.

appointed by the King, for the affairs of each wince, are to be a court of civil jurifdiction for hearing and etermining appeals, subject, however, to such appeals from heir judgment as heretofore existed. All lands in Upper lands are to be granted hereafter in free and common soccase; adalo in Lower Canada, when the grantee shall defire it, subfinevertheless to alterations by an act of the Legislature.

British America is superintended by an officer stilled Goveror General of the four British provinces in North-America, tho, besides other powers, is commander in chief of all the shifts troops in the four provinces and the governments attachd to them and Newfoundland. Each of the provinces have a sentenant Governor, who, in the absence of the Governor leneral, has all the powers requisite to a chief magistrate.

THE ISLAND

CAPE BRETON;

ANNEXED TO THE PROVINCE OF LOWER

SITUATION, EXTENT, &c.

The island, or rather collection of islands, called by the French Les Isles de they are commonly the name of the 111 and 470 N. and bee don, or 14° and 15 leagues to the eaftw. miles in length, and Nova Scotia by a nara

1 4

lie fo contiguous as that , and comprehended under ton, lies between lat. 450 60°, W. long, from Lon-Philadelphia, and about 45 . It is about one hundred th; and is separated from d the Gut of Canfo, which

is the communication person and Atlantic Ocean, and the Gulph of St. Lawrence.

It is furrounded with little sharp-pointed rocks, separated from each other by the waves, above which some of their tops are viable. All its harbours are open to the east, turning towards the fouth. On the other parts of the coast there are but a few anchoring places for small vessels, in creeks, or between islets. The harbour of St. Peter's, at the west end of the island, is a very commodious place for carrying on the fishery.

CLIMATE.

Except in the hilly parts, the furface of the country has but licele folidity, being every where covered with a light moss and with water. The dampness of the soil is exhaled in fogs, without rendering the air unwholesome. In other respects, the climate is very cold, owing either to the prodigious quantity of lakes, which cover above half the island, and remain frezen a long time; or to the number of forests, that totally intercept the rays of the fun; the effect of which is belides decreated by perpetual clouds.

HISTORY OF ITS SETTLEMENT, &c.

Though some fishermen had long resorted to this island every fummer, not more than twenty or thirty had ever fixed there. The French, who took possession of it in August 1713, were properly the first inhabitants. They changed its name into that of Isle Royale, and fixed upon Fort Dauphin for their principal settlement. This harbour was two leagues in circumference. The ships came to the very shore, and were sheltered from winds. Forests affording oak sufficient to fortify and build a large city, were near at hand; the ground appeared less barren than in other parts, and the sishery was more plentiful. This harbour might have been rendered impregnable at a trissing expence; but the dissibility of approaching it (a circumstance that had at sirst made a stronger impression than the advantages resulting from it) occasioned it to be abandoned, after great labour had been bestowed upon the undertaking. They then turned their views to Louisbourg, the access to which was easier; and convenience was thus preferred to security: the fortification of Louisbourg, however, was not begun till 1720.

In the year 1714, some fishermen, who till then had lived in Newfoundland, settled in this island. It was expected that their number would soon have been increased by the Acadians, who were at liberty, from the treaties that had been granted them, to remove with all their effects, and even to dispose of their estates; but these hopes were disappointed. The Acadians chose rather to retain their possessions under the dominion of Britain, than to give them up for any precarious advantage they might derive from their attachment to France. Their place was supplied by some distressed adventurers from Europe, who came over from time to time to Cape Breton, and the number of inhabitants gradually increased to four thousand. They were settled at Louisbourg, Fort Dauphin, Port Toulouse, Nerucka, and on the coasts where they sound a proper beach for drying the cod.

This island was attacked by the English in 1745; and the event is of so singular a nature, that it deserves a particular detail. The plan of this first invasion was laid at Boston, and New-England bore the expence of it. A merchant named Perfect, who had excited, encouraged, and directed the enterprize, was intrusted with the command of an army of six thousand men, which had been levied for this expedition.

Though these forces, convoyed by a squadron from Jamaica, brought the sist news to Cape Breton of the danger that threatened it; though the advantage of a surprise would have secured the landing without opposition; though they had but six hundred regular troops to encounter, and eight hundred inhabitantality armed, the success of the undertaking was still prizious. What great exploits, indeed, could be expected from

militia fuddenly affembled, who had never feen a fiege or faced an enemy, and were to act under the direction of fea-officers only. These unexperienced troops flood in need of the affictance of some fortunate incident, which they were indeed favoured with in a fingular manner.

The confination and repairs of the fortifications had always been left to the care of the garriton of Louisbourg. The foldiers were caper of being employed in these works, which they confidered as conductive to their fafrity, and as the means of procuring them a comfortible fublishence. When they found that those who were to have pill them, appropriated to themselves the profit of their labours, they demanded justice. It was denied them, and they were determined to affert their right. As these depredations had been shared between the chief perions of the colony and the subsiterin officers, the foldiers could obtain no redress. Their indignation against these rapacious extortioners rose to such a height, that they despised all authority. They had lived in an open rebellion for six months, when the British appeared before the place.

This was the time to conciliate the minds of both parties, and to unite in the common cause. The foldiers made the first advances; but their commanders mistrusted a generosity of which they themselves were incapable. It was simily believed that the soldiers were only desirous of fallying out, that they might have an opportunity of deserting; and their own officers kept them in a manner prisoners, till a desence so ill managed had reduced them to the necessity of capitulating. The whole island shared the fate of Louisbourg, its only bulwark.

This valuable possession, restored to France by the treaty of Aix la Chapelle, was again attacked by the British in 1758, and taken. The possession was confirmed to Great Britain by the peace in 1763; since which the fortifications have been blown up, and the town of Laussbourg dismantled.

SOIL, PRODUCTIONS, &c.

The inhabitants never applied themselves to agriculture, the soil being unit for it. They often sowed corn, but it seldom came to maturity; and when it did thrive so much as to be worth reaping, it had degenerated so considerably, that it was not sit for seed for the next harvest. They have only continued to plant a sew pot-herbs that are tolerably well tasted, but must be renewed every year tom abroad. The poorness and scarcity of pastures has likewise prevented the increase of cattle. In a word, the soil of Cape Breton seems calculated to invite none but sishermen.

Though the iffand was entirely covered with forests before it was inhabited, its wood has fource ever been an object of trade, A great quantity, however, of 10ft wood was found there fit for firing, and fome that might be used for timber: but the oak his always been fearce, and the for never yielded much refin. The petry trade was a very inconsiderable object. It consisted only in the fkins of a few lynxes, elks, milk-rats, wild cars, hears, otters, and fexes both of a red and illumgray colour. Some of these were procured from a colony of Mickenic Indicas who had fettled on the island with the French, and never could raise in he thin fixty men able to boar arms. The roth came from St. John's, or the neighbouring continent. Greater adviatages might politbly have been derived from the coal mines, which abound in the island. They lie in a hot zontal direction; and being no more thin fix or eight feet below the furface, may be worked without digging deep, or draining off the waters. Notwithstanding the produgious demand for this coal from New-England, from the year 1745 to 1749, these mines would probably have been forfaken, had not the ships which were sent out to the French illands wanted ballaft. In one of these mines a fire has been kindled, which could never yet be extinguished.

The people of Cape Breton did not fend all their fish to Earnope, they fent part of it to the French fouriern islands, on board twenty or twenty-five ships from seventy to one hundred and forty tons burden. Besides the cod, which made at least half their cargo, they exported to the other colonies timber. planks, thin oak boards, salted salmon and macked, train-oil, and seacost. All these were paid for in sugar and cosses, but chiefly in rum and molasses. The island could not consume all their correspondities. Canada took oil but a small part of the overplant a was chiefly bought by the people of New-England, who gave in exchange fruits, vegetables, wood, brick, and cittle. This ide of exchange was allowed; but a small fish, carried on in slour, and salt fish.

POPULATION, CHIEF TOWNS, &c.

On this island there are about one thousand maintants, who have a lieurenant-governor resident among them, appointed by the king. The principal towns are Sidney, the capital, Louisbourg, which has the best harbour in the island.

This island may be considered as the key to Canada, as very valuable fishery, in its neighbourhood, depends for its tion on the possession of this island; as no nation ca without some convenient hubbour of strength to start it; and Louisbourg is the part cipal one for the

This was the time to conciliate the minds of both parties, and to unite in the common caule. The foldiers made the first advances; but their commanders mistrusted a generosity of which they themselves were incapable. It was firmly believed that the soldiers were only desirous of fallying out, that they might have an opportunity of deserting; and their own officers kept them in a manner prisoners, till a desence so ill managed had reduced them to the necessity of capitulating. The whole island shared the fate of Louisbourg, its only bulwark.

This valuable possession, restored to France by the treaty of Aix la Chapelle, was again attacked by the British in 1758, and taken. The possession was confirmed to Great Britain by the peace in 1763; since which the fartifications have been blown up, and the town of Laussbourg dismansled.

SOIL, PRODUCTIONS, &c.

The inhabitants never applied themselves to agriculture, the soil being unit for it. They often lowed corn, but it soldom come to maturity; and when it did thrive so much as to be worth reaping, it had degenerated so considerably, that it was not sit for need for the next harvest. They have only continued to plant a few pot-heads that are tolerably well tosted, but must be renewed every year from alread. The poorneis and scarcity of pastures has likewise prevented the increase of cartle. In a word, the foil of Cape Breton leans calculated to invite none has sistermen.

UPPER AND LOWER CANADA.

Though the island was entirely covered wit's forests before it was inhabited, its wood has found ever been an object of tradit. A great quantity, however, of 10ft wood was found there fit for firing, and some that might be used for timber: but the oak has always been fearce, and the fit never yielded much rofin. The peltry trade was a very inconfiderable object. It confilled only in the fkins of a few lynnes, clks, mufk-rate, wild cars, bears, otters, and foxes both of a red and filtranging cellur. Some of thefe were procured from a colony of Mickeyic Indivision had fettled on the ifland with the French, and never could raise more than fixty men able to bear at no. The roth came from St. John's, or the neighbouring continent. Greater advantages might politbly have been derived from the coal mines, which abound in the island. They lie in a horizontal direction; and being no more than fix or eight feet below the furface, may be worked without digging deep, or draining off the waters. Notwithflanding the prodigious demand for this coal from New-England, from the year 1745 to 1749, these mines would probably have been forfaken, had not the ships which were fent out to the Frencis illands wanted ballait. In one of thele mines a fire has been kindled, which could never vet be exting alfihed.

The people of Cape Breton did not lend all their fish to Edrope, they fent part of it to the French fouriern illands, on board
twenty or twenty-five ships from seventy to one handred and
forty tons burden. Besides the cod, which made at least half
their cargo, they exported to the other colonies timber, planks,
thin oak boards, salted falmon and mackrel, train oil, and sercoal. All these were paid for in sugar and cossee, but chiefly a
rum and molasses. The island coald not consume all these commodities. Canada took oil but a small part of the overplant a
was chiefly bought by the propin of New-England, who gave it
exchange frosts, vegetables, wood, brick, and coald. This is de
of exchange was allowed; but a small of trade was andeed to
it, carried on in slow, and salt falls.

POPULATION, CHIEF TOWNS, &c.

On this island there are about one thousand magnitudes, who have a lieutenant-governor relident among them, appointed to the king. The principal towns are Sidney, the capital, and Louisbourg, which has the best harpout in the island.

This island may be confidenced as the key to dismall, and the very valuable fitherly, in its neighbourhood, anymous for its prote fon on the position of this identity, and nation can carry it is without some convenient horosur of through to supply and protest; and Louisbourg is the principal one for three purposes.

NEW BRITAIN;

ANNEXED TO THE COVERNMENT OF LOWER CANADA.

The country lying round Hudson's Bay, or the country of the Esquimaux, comprehended Labrador, New North and South Wales, has obtained the general name of New Britain, and is attached to the government of Lower Canada. A superintendant of trade, appointed by the Governor-General of the sour British Provinces, and responsible to him, resides at Labrador.

CLIMATE.

The climate, even about Haye's river, in only lat. 570, is, during winter, excessively cold. The snows begin to fall in October, and continue falling by intervals the whole winter: and, when the frost is most rigorous, in form of the finest sand. The ice on the rivers is eight feet thick. Port wine freezes into a folid mass; brandy coagulates. The very breath falls on the blankets of the beds in the form of a hoar frost, and the bed-cloaths often are found frozen to the wall. The fun rifes. in the shortest day, five minutes past nine, and sets five minutes before three. In the longest day the sun riles at three, and sets about nine. The ice begins to disappear in May, and hot weather commences about the middle of June, which at times is so violent as to scorch the faces of the hunters. Thunder is not frequent, but very violent. But there is a great difference of heat and cold in this vast extent, which reaches from lat. 50. 40, to lat. 63 north.—During winter the firmament is not without its beauties. Mock funs, halos are not unfrequent; they are very bright, and richly tinged with all the colours of the rainbow. The fun rifes and fets with a large cone of yeilowish light. The night is enlivened with the Aurora Borealis, which spreads a thousand different lights and colours over the whole concave of the sky, not to be defaced even by the iplendour of the full moon; and the stars are of a fiery redness.

In this feafon it however frequently happens, that the air is fo full of watery vapours, that the fun will be obscured for several weeks together. This is occasioned by the rime, which ascends from the open sea water, and being condensed by the cold, is driven by the wind to a considerable distance at times, from forty to sitty miles.

The climate is very perceptibly milder in the interior, than in the parts on the fea cent. The inow is not half so deep, neithere the hottest days in summer so sultry. If a man is frozen in the upper country, it is owing to his not having taken proper tree of himself; whereas upon the sea coast, with every necessary precession, a man will frequently have his nose, face, or fingers-coast kinned.

The heavens, in cold winter nights, do not exhibit that lumisous appearance, which, as before remarked, is observable on the sea coast; nor do the stars shine with that resulgent lustre. The Aurora Boreatis is not so common nor so brilliant; the Paralelia and Parascelenes are less frequent; and fogs in the winter strunknown.

In short, the sea coast and the upper country will admit of no comparison: one is temperate and healthy, the land dry, pleasant, and fertile in spontaneous productions, and the animal creation various and excellent for the support of man: in it, a person who could live retired, might pass his days with case, content, and felicity, and if he did not enjoy an uninterrupted thate of health, it would not be the fault of the air he lived in. On the other hand, the lower country is one endless bog, where the favage animals themselves are sometimes constantly swampt. The finest summer's day will begin with a scorching heat, and terminate with a cold eafterly fea fog. The weather ufuslly incident to autumn and midfummer, is experienced in their different extremes during the short space of twelve hours. The inhabitants frequently fall a prey to the feverity of the frost. The whole country furnishes but one species of quadruped fit for the support of man; and the Europeans are accurled with an afflicting coidemical diforder, which they very emphatically term "The Country Distemper."

FACE OF THE COUNTRY, SOIL, &c.

As far inland as the Hudion Bay Company have inthements, which is fix hundred miles to the well of Fort Churchill, or a place called Hudion House, lat. 53°, lon. 105° 27' W. from London, is flat country; nor is it known how far to the exitward the great chain of mountains feen by the navigators from the Pacific Ocean branches off. From Moofe River, or the bottom of the bay, to Cape Churchill, the land is flat, marshy, and wooded with pines, butch, larch, and willows. The pine trees, which are of different kinds, are but small; near the feastballs they generally run knotty, and are unfit to be used in the structure of good, buildings. The same may be said of the juniper trees, growing in the time fituation.

But on leaving the marthy ground, and retiring folland to the fouthward, the trees are of a more stately growth; and about Moofe and Albany Forts, they are found of all diameters. More

Churchili See le 1 mr. Potatoes, turnips, and almost every species of l'ache a period stuff, are reared with facility; and no doubt com might be carried, if the lords of the foil, the Hudson's Bay Generally, had patriotism enough to make this extensive country of any privice to Great-Britain. But it has been an invariable maken with them for many years past, to damp every laudable indeavour in their servents, that might tend to make their country. This conducts generally beneficial to the Mother Country. This conducts with a particular servents with a particular servents. They surgine, own to the nation, that

pany. Then begine, the lands they pelleds a individuals to enquire it is therefore their perible, to discount dation of their below

finary to those who are views of the Comlown to the nation, that hivstion, it might induce to an exclusive charter; ent it in the worft light th would shake the foun-

Throughout the woods to the fouthward the ground is covered With a very thick most, among which grow various kinds of small shrubs, bearing fruit, such as goolebearles, currants, strawborres, supporties, ereal cones, with many others too tedious to mention. A here, which the natives call Wee fur a pucka, grows very plentifully in all parts of the country. The Indians ! make use of it by way of medicine; it makes a very agreeable tox, and is much used here, both by himpeans and natives, not only for its pleafant flavour, but for its inlutary effects. Its virtions are many; it is an aromatic, very ferviceable in rheumatic eates, Brengthons the flomach, relieves the head, and also promores peripiration. Outwardly, it is applied to gargrenes, contutions, and excoriations: in the latter cate the powder is made use of. Another herb of much utility to the natives grows likewise here; this they call Jack ash a pack. They mix it with their tobacco to reduce its firength.

In the interior of the country is a great quantity of coal, which is conveyed down the rivers by the currents. A person belonging to the Hudson Bay Company once brought down a piece he had taken from the carth, where it was piled up in heaps. It was in every respect finilar to that brought to London from the North of England and Scotland. He said that he asked the Indians the use of it; and on their expressing their ignorance, he put some of it in the fire, which burnt violently to their great assonishment. What other treatures may be concealed in this unknown repository, or what valuable ores may be intermix-

is the coal, we will not take upon us to determine.

All these countries are well stored with moose, beavers, seters, &c. but the red deer, jamping deer, and buildhe, are not to be found till where the country becomes more open, and so free from woods, that in many places leave a fusic many can be procured to make a temporary sine for travelless, who are obliged instead thereof to use buffaloe dung.

Many spacious lakes are to be found in the inland parts. Most of these abound with sish, especially when joined to tarriver; but the natives seldom or never look after them, and the greater part of those Indians who come to the English settlements to trade, will neither cat fish, water-sowl, nor any emphasious animal.

How far the foil of this country may be favourable to the culture of vegetables, we are not able to advance. Experiments, which should be our principal guide to knowledge in these matters, never having been much made use of, though we may vegetare to assent, that many parts would admit of callibration. The Hudson's Bay Company servants have tried Indian corn and barley, by way of experiment, which came to perfection: potatees, tamips, cartest, radishes, onions, &c. have been littly reared, and found as good as those in Canada.

The fruits which spontaneously shoot up, are not in such great variety in the wildernesses of Canada, as in the country we are speaking of. The natives collect vast quantities of a kind of wild chemies and bring them in for sale. The Hudt at's Bry people make an excellent beverage of them, which is grateful to the taste, and is an excellent antisconducte. Respisence, three brinesses carrants, granderness, and an infinity of other kinds are to be sound every where. So that a person, without the help of ammunition, may in the summer scalon procure a very comfortable substitution, were he bewildered, and alone. Should any one be in this situation, almost every pond of water would formish him with eggs of ducks, &c. and every thicket with a latiety of delicious fruit.

The eistern coast is barren, past the efforts of cultivation. The surface is every where uneven, and covered with mades of slope of an artizing fize. It is a country of fruitless and frightful mountains, some of an astonishing height. The variess mertall of lakes, formed not from springs, but rain and move, so chally as to be productive of a few small trout only. The mountains have here and there a blighted shrub, or a lattice meas. The voltes are fall of crooked, stunted trees, places, sir, buch, and colors, or rather a species of the juniper. In latitude cool on this coast, regulation ceales. The whole shore, like that on the west, is faced with islands at some distance from land,

The principal rivers which water this country, are the Wager, Monk. Seal. Pockerckefko, Churchill, Nelfon, Hayes, New Severn, Albino, and Moote rivers, all which empty into Hudfon's and James Bay from the west. The mouths of all the rivers are filled with shoals, except Churchill's, in which the largest ships may lie to but ten miles higher the channel is obstructed by land banks. All the rivers as far as they have been explored, are full of rapida and catarasts, from ten to fixty feet perpendicular. Down these rivers the Indian traders find a quick passage; but their return in a labour of many months.

INHABITANTS, CUSTOMS, &c.

The inhabitants among the mountains are Indians; along the coaffs, Equimaux. The Hudton's Bay Indians, in all probability, were originally tall, properly proportioned, flrongly made, and of as monly an appearance as any people whatever. This, however, was before their commerce with Europeans had enervated and debered their minds and bodies, by introducing spirituous liquors among them, and habituating them to fevere courfes of drinking. They are naturally much addicted to this fatal cuftom; but when it is encouraged and enforced by those who call themselves an en-Toplismed people, it certainly is not only blameable, but highly constinal. Were common fente but made ute of to direct the condistrict those who are benefited by the trade carried on with the Indians, self-interest and good policy would teach them to discouway is much as pollible, a habit to prejudicial to them, and fatally care to these miserable people. They are generally of a sient disposition, and easy to be perfusifed by perfors who but if their language; but as a most unconscionable gain is to doing in spirits with them, it is not to be supposed the will ever be induced to put a flop to this unchriftian prac-An Indian will barrer away all his furs, may even leave him-If without a rag to cover his nakedness, in exchange for that wie unwholeforae first, called English brandy. If by Juch excoffive intexication they only irreparably injured their own conthrutions, and debilitated their race, the consequences, though permicions, would not be to dreadful as they mustly are; but during their intersection is really freliconariets enfort, elegancysince such differentiwed, and death is inequented the confequence of former buckerings, which but for this ilmulator had been Luried in oblivion.

By this aribolical commerce the country is impoverished of inhabitants, the trade of ceurie imperceptibly declines, and this extensive fetch ment is in a great measure presented from rivalling many of our other fereign citablishments.

the natives are however a people of a middle fize, of a copcomplexion, their features regular and agreeable, and few nated or deformed persons are seen among them. When ing they have excessive large bellies, which is to be attributed be enormous quantity of food they devour; but as they grow and puberty this part decreases to a common fize. Their litutions are strong and healthy, and their disorders few; chief of these is the dysentery, and a violent pain in the lift, which the English call the Country Distemper. The her is supposed to proceed from the cold air being drawn into the lungs; which impeding the vessels from spreading throughout that organ, hinders the circulation, and renders respiration extremely painful and difficult. They teldom live to a great age, but enjoy all their faculties to the last.

In their dispositions they are mild, affable, and good-natured, when fober; but when intoxicated they are loft to every focial quality, and discover the greatest propensity to quarreiling, theft, and the worst of vices. When we view the sair side of their characters, we find them kind, courteous, and benevolent to each other, relieving the wants and necessities of their distressed brethren with the greatest good-nature, either by counsel, sood, or cloathing. The good effects of this excellent disposition are frequently experienced by themselves; for, as in their mode of life no one knows how foon it may be his own fate to be reduced to the verge of extremity, he secures for himself a return of kindness, should be experience that vicishtude. On the other hand they are fly, cunning, and artful to a great degree; they glory in every species of furacity and artifice, especially when the theft or deception has been so well executed as to escape detection. Their love to their offsprings is carried to a very great height. From the state of childhood to maturity they teldom or never correct their children, alledging that when they grow up they will know better of themselves. Neither is this indulgence made a bad use of when reflection succeeds the irregularities of youth; on the contrary, fentiments of reverence, gratitude, and love, link their affections to the authors of their being; and they feldom fail to give the utmost assistance to their aged parents whenever their imbecility requires it.

With respect to their corporeal abilities, they are almost without exception great walkers; they patiently endure cold, hunger, and fatigue; and bear all misfortunes with admirable fortitude and resignation, which enables them bravely to encounter the peoplest of ill, and renders the mind ferene under the pressure of adversity. As their country abounds with innumerable neir coit to be grounded on folly, as they fom ne hunger through it; nay, many have been i others have been reduced to the fad necessiir own offspring.

as a great part of the Factory provisions confid the Indians, the English supply them with po this purpole, allowing them the value of a ! ry ten geele they kill; accordingly, after the supply, he sets off from his tent early in the m thes, where he fets himfelf down, with a degi cult to be imitated, and being sheltered by s for the geele. They shoot them flying, and: us at this iport, that a good hunter will kill, in t or fixty in a day. Few Europeans are able t ne, hunger, or advertity in any shape, with as ragnanimity and composure to that which is es of this country. After being out a whole sted to the bleakest winds and most penetrating out the least thing to satisfy the calls of nati s home, warms himself at the fire, smooks a fe-), and then retires to rest, as calm as if in the m The happens to have a family, he cannot alway limity; when reduced to extremity, his affectionity uninates over his philotophy, if it might be ic way to the most nungent foreces

ticher a particular tree; in which he imagines the Great Beingpublis, and influences his good or ill fortune in this life.

. The religious fentiments of these people, though confused, are in some respects just. They allow that there is a good Being, and they fometimes fing to him; but not out of fear or adoration, for he is too good, they say, to hurt them. He is called Kitch-e-mane-to, or the Great Chief. They further say, there is an evil Being, who is always plaguing them; they call him Whit-ti-ce. Of him they are very much in fear, and feldom cat any thing, or drink any brandy, without throwing tome into the fire for Whittice. If any misfortune befals them, they fing to him, imploring his mercy; and when in health and prosperity do the same, to keep him in good humour. Yet, though obsequious sometimes, at others they are angry with him, especially when in liquor; they then run out of their tents, and fire their guns in order to kill him. They frequently perfuade themselves that they ice his track in the moss or snow, and he is generally described in the most hideous forms. They believe that both the good and the had Being have many fervants; those of the former inhabiting the air, but those of the latter walking on the earth. They have likewife an opinion that this country was once overflowed; an opision founded on meeting with many sea shells far inland.

They have no manner of government or subordination. The father, or head of a family, owns no superior, nor obeys any command. He gives his advice or opinion of things, but at the same time has no authority to enforce obedience; the youth of his family follow his directions, but rather from filial effection or reverence, than in confequence of any duty exacted by a superior. When feveral tents or families meet to go to war, or to the Factories to trade, they choose a leader, but it is only voluntary dedience they pay to the leader so chosen; every one is at liberty to leave him when he pleases, and the notion of a commander a quite obliterated as foon as the voyage is over. MERITALONE GIVES THE TITLE TO DISTINCTION; AND THE POSSESSION OF QUALITIES THAT ARE HELD IN ESTEEM IS THE ONLY METHOD to OBTAIN RESPECT. Thus a person who is an experienced hunter; one who knows the communication between the lakes and rivers; one who can make long harangues; is a conjuror: or if he has a family: fuch a man will not fail of being fellowed by several Indians, when they happen to be out in large parties; they likewise follow him down to trade at the settlements; he however, obliged to secure their attendance upon this eccasion by promises and rewards, as the regard paid to his filities is of too weak a nature to command subjection,-

. . . .

In war a mutual refentment against their enemies forms their is for perpetrating their revenge. Perfonal courage, potience hardships, and a knowledge of the manners and country of the verfaries, are the qualifications fought after in the choice of a k. They follow him, whom they have thus chosen, with fidelity execute his projects with alacrity; but their obedience doe proceed from any right in the leader to command, it is founded on his merit, on the affection of his followers, and desire of subduing their enemies. These sentiments actuate

breaft, and fuch a comp for as the fo happens the to gain their

ding the time, is by numb ; thus, if he be asked how will answer, "so many nig they proceed to the lum

monthly division, reckoning thirteen of these in the year, which are expressive of some remarkable event or appear that happens during that revolution of the moon.

Their method of computing numbers is rather abstruse, as reckon chiefly by decades; as follows:—Two tens, three tens. Ten tens, or an hundred tens. A few units over or under added or substracted. Thus, thirty-two in their tongue i pressed, by saying three tens and two over.

Those Indians of whom we have now been treating and of whe Peltries are obtained, are known by the following names The Ne-heth-aw-a, the Affinne-poetus, the Fall, the Suffee, Black-feet, the Paegan, and the Blood-Indians. These at only Indians with which the Company trade, and consequithe only ones whose manners, customs, &c. are known.

The laudable zeal of the Moravian clergy induced them, i year 1752, to fend missionaries from Greenland to this country fixed on Neshit's harbour for their settlement; but a fift party, some of them were killed, and others driven In 1764, under the protection of the British government, ther attempt was made. The missionaries were well receive the Equimates, and the mission goes on with success.

ANIMALS.

The animals of these countries are, the moose deer, stags deer, bears, tygers, buffaloes, wolves, soxes, beavers, clynxes, martins, squirels, ermines, wild cats, and hares.

in deer pass in valt herds towards the north in October, seeking extreme cold. The male polar bears rove out at sea, on the Juning ice, most of the winter, and till June; the females lie specialed in the woods, or beneath the banks of rivers, till March, k when they come abroad with their twin cubs, and bend their couple to the sca in search of their consorts. Several are killed intheir passage; and those that are wounded show yast fury, roar bileoully, and bite and throw up in the air even their own pro-Fray. The females and the young, when not interrupted, contimue their way to the sca. In June the males return to shore, and by August are joined by their consorts, with their cubs, by that time of a confiderable fize. The feathered kinds are, geefe, bullards, ducks, growle, and all manner of wild fowls. Indeed multitudes of birds retire to this remote country, to Labrador and Newfoundland, from places more remotely fouth, perhaps from the Antilles; and some even of the most delicate little species. Most of them, with numbers of aquatic fowls, are seen returning fouthward with their young broods to more favourable climates. The favages in some respects regulate their months by the appearance of birds; and have their goofe-month, from the vernal appearance of geefe, from the fouth. All the growle kind, ravens, cinereous, crows, titmouse, and Lapland finch, brave the severest winter; and feveral of the falcons and owls feek shelter in the woods. Of fish, there are whales, morfes, feals, cod-fish, and a white fish, preferable to herrings; and in their rivers and fresh waters, pike, perch, carp, and trout.

All the quadrupeds of these countries are clothed with a close, soft, warm fur. In summer there is here, as in other places, a variety in the colours of the several animals; when that season is over, which holds only for three months, they all assume the livery of winter, and every fort of beasts, and most of their sowls, are of the colour of the snow; every thing animate and inanimate is white. This is a surprising phenomenon. But what is yet more surprising, and what is indeed one of the most striking things, that draw the most inattentive to an admiration of the wildow and goodness of Providence, is, that the dogs and cats from Britain that have been carried into Hudson's Bay, on the approach winter have entirely changed their appearance, and acquired a much longer, softer, and thicker coat of hair than they had originally.

DISCOVERY AND COMMERCE.

knowledge of these northern seas and countries was owing roject started in England for the discovery of a north-west

passage to China and the East-Indies, as early as the year 1576. Since then it has been frequently dropped and as often revived, but never yet compleated; and from the late voyages of discovery it seems probable, that no practicable passage ever can be found. Porbifour discovered the Main of New Britain, of Terra de Labrader, and those streights to which he has given his name. In 1585, John Davis failed from Portsmouth, and viewed that and the more northern coasts, but he seems never to have entered the bay. Captain Hudson made three voyages on the same adventure, the

Frit in 1607, the fer.
This bold and judicion into the bay known I penetrated to eighty frozen zone. His the difficulties he if world of fruit and fruit and prepare I in the bill

and his third and laft in 1610, attered the ftreights that lead mafted a great part of it, and half, into the heart of the ilcovery not being abated by this empire of winter, and ere until the enfuing spring,

and prepare I, in the bit is a form to purfue his differences; but his crew, who differed equal hardflips, without the fame spirit to support them, mutinied, seized upon him and seven of these who were most faithful to him, and committed them to the sury of the icy seas in an open boat. Hudson and his compare as were either swallowed up by the waves, or gaining the inhapitable coast, were destroyed by the savages; but the stip and the rest of the men returned home.

Other attempts towards a diffeovery were made in 1512 and 1607; and a patent for planting the country, with a charter for a company, was obtained in the year 1670. In 1646, Captain Ellis wintered as far north as 57 degrees and a half, and Captain Cariffopher attempted farther discoveries in 1661. But belides these voyages, we are indebted to the Hudson's Bay Company for a journey by land; which throws much additional light on this in teer, by affording what may be called demonstration, how much faither North, at least in some parts of their voyage, ships must go, before they can pass from one side of America to the other. The northern Indians, who came down to the Company's ficulies to trade, had brought to their knowledge a river, which, on account of much copper being found near it, had obthined the name of the Copper Mine river. The Company being defineus of examining into this matter with precifion, directed Mr. Hearne, a young gentleman in their tervice, and who having been brought up for the navy, and ferved in it the war before laft, was extremely well qualified for the purpose to proceed over land, under the convoy of those Indians, for that river; which he had orders to survey, if possible, quite down to its exit into the fea; to make observations for fixing

the latitudes and longitudes; and to bring home maps and draws, both of it and the countries through which he should pass. Accordingly Mr. Hearne let out from Prince of Wales's Fut, on Churchill river, latitude 58° 471' north, and longitade 94° 711 west from Green wich, on the 7th of December, 770. Mr. Hearne on the 13th of July reached the Copper Mise river, and found it all the way, even to its exit into the fee, incumbered with shoals and falls, and emptying itself into kover a dry flat of the shore, the tide being then out, which femed, by the edges of the ice, to rile about twelve or fourteen feet. This rife, on account of the falls, will carry it but every small way within the river's mouth, so that the water in it has not the least brackish taste. Mr. Hearne is, nevertheless, fure of the place it emptied itself into being the sea, or a branch of it, by the quantity of whalebone and leal skins which the Equimaux had at their tents; and also by the number of seals which he saw upon the ice. The sea, at the river's mouth, was full of islands and shoals, as far as he could see, by the ashistance of a pocket telescope: and the ice was not then (July 17th) broke up, but thawed away only for about three quarters of a mile from the shore, and for a little way sound the island and shools which lay off the river's mouth. But he had the most extensive view of the sea when he was about eight miles up the river, from which station the extreme parts of it bore N. W. by W. and N. E.

By the time Mr. Hearne had finished his survey of the river, which was about one o'clock in the morning on the 18th, there came on a very thick fog and drizzling rain; and as he had found the river and sea, in every respect unlikely to be of any mility, he thought it unnecessary to wait for fair weather, to determine the latitude more exactly by observation; but by the extraordinary care hotook in observing the courses and distances, walking from Congecathawhachaga, where he had two very good phiervations, he thinks the latitude may be depended on within 10' at the utmost. It appears from the map which Mr. Hearne constructed of this fingular journey, that the mouth of the Copper Mine river lies in latitude 72° N. and longitude 25° W. from Churchill river; that is, about 119° W. of Greenwich. Mr. Hearne's journey back from the Copper Mine river to Churchill, lasted till June 30th, 1772; so that he was absent almost a year and seven months. The unparalleled hardships he fuffered, and the effential service he performed, have met with stimble reward from his masters. He has been several years theor of Prince of Wales's Fort on Churchill liver, where me taken prisoner by the French in 1782.

Though the adventurers failed in the original purpose for which they navigated this bay, their project, even in its failure, has been of advantage to England. The vast countries which furround Hadson's Bay, as we have already observed, abound with animals, whose fur and skins are excellent. In 1670, a charter was granted to a company, which at present consist of only seven persons, for the exclusive trade to this bay, and they have acted under it ever since with great benefit to the private men who compose the company, though comparatively with little advantage to Great st.

ernor; the Duke of Albe-Prince Rupert was EC marle, Lord Craven, Loru Arling in, and several other noble henlive, as words can well perionages, constituted the first charter is as full, ample, and make it; and, as if they fulp e intrution of fome advenrate in this valuable trade, turers on their territories, to 1 the most severe penalties, with forfeiture of property, are laid on all those, who shall haunt, frequent, or trade upon their coasts; how fur their successors have been entitled to these exclutive immunities, or how far their confined manner of carrying on the trade has proved beneficial to the country, we shall endeavour to point out.

The first traders to these parts acted upon principles much more laudable and benevolent, than their forcessors seem to have been actuated by. They appear to have had the good of the country at heart; and to have endeavoured by every equitable means, to render their commerce profitable to the mother countiv. Their inflructions to their factors were full of fentiments of Christianity, and contained directions for their using every means in their power, to reclaim the uncivilized Indians from a flate of barbarifin, and to inculcate in their rude minds the humane precepts of the golpel. They were at the same time admonified to trade with them equitably, and to take no advantage of their native simplicity. They were further instructed to explore the country, and to reap such benefit from the foil and produce thereof, as might redound to the interest of the English nation, as well as contribute to their own emolument. And laftly, they were directed to be particularly careful in sceing that the European servants behaved orderly, and lived in briety and temperance, observing a proper veneration for the vice of God, which was ordered to be collectively performed

every featonable opportunity. These were injunctions worthy the exalted stations and rank life of those who had the first direction of the affairs of the npany; and reslected much henour on their characters, as

nen and christians: and had these praise-worthy establishments been adhered to, the country granted them might at this day have been a real advantage to Great-Britain. But instead of encouraging the trade, by a mild, equitable, and engaging department towards the natives;—instead of ingratiating themistives by affability and condescension with a harmless people, the Husbon's Bay Company use them with undeserved rigour, causing them frequently to be beat and maltreated, although they have come some hundreds of miles in order to barter their skins, and procure a sew necessaries to guard against the severity of the approaching winter: owing to this conduct the trade has materially declined of late years.

Another reason why the Company's trade has declined, is a want of spirit in themselves, to push it on with that vigour the importance of the contest deserves. The merchants from Canada have been heard to acknowledge, that was the Hudson's Bay Company to prosecute their inland trade in a spirited manner, they must be soon obliged to give up all thoughts of penetrating into the country; as from the vicinity of the Company's salones to the inland parts, they can assort to undersell them in every branch.

To explain this emulation between the company and the Canadian traders, it will be necessary to review the state of the Canadian traders from Montreal, actuated by a laudable spirit of industry and adventure, and experiencing the pecuniary advantages that resulted from their exertions, had become so numerous and industry advantages that resulted from their exertions, had become so numerous and industry advantages that resulted from their exertions, had become so numerous and industry the state of the latter was in a great measure catost from its usual channel. The Indians being supplied with the truth thing they could wish for at their own doors, had no larger occasion, as they hitherto had done, to build canoes, and public several hundred miles, for the sake of cultivating a commerce with the Company; in which peregrination they were supposed to much danger from hunger; so much so, that at one time seven canoes of upland Indians perished on their return to their own country.

Ever fince the above period, the Canadian adventurers have totally increased in the upland country, much to their own reclument, and the great loss of the Company: who, it may be faid, are sleeping at the edge of the sea, without spirit, and without vigour or inclination to affert that right, which their reclusive charter, according to their own account, entitles them to.

It is true, the Hudson's Bay Company have at this time a few

in such a languid manner, that their exertions have hitherto proved inadequate to the purpose of supplanting their opponents.

The Company fignify to their Factors, that they have an indisputable right to all the territories about Hudson's Bay, not only including the Straits and Bay, with all the rivers, inlets, &c. therein, but likewise to all the countries, lakes, &c. inde finitely to the westward, explored and unexplored. They therefore fligmatize the Canadian merchants with the infulting epithets of pedlars, thieves, and interlopers; though the quann es, bears no comparison to tity of furs import___ those sent from Canada. this nbounded claim, to which they pretend, be founded upon ju ice, why, in the name of equity do they not affert these pretensions by a proper application to the British Parliament to remove the industrious pedlars, whom they would feem to look upon with fuch ineffable contempt, and prevent their any longer encroaching on their territories; but the shock they received from the parliamentary application of the patriotic Mr. Dobbs, in the year 1749, has given them a distaste to parliamentary inquiries They know the weakness of their claim, and the instability of their pretenfions; it is therefore their interest to hide from an inquisitive but deluded nation, every investigation which might tend to bring to light the futility of their proceedings.

If the Canadian traders can adduce any profit to themselves by prosecuting this inland business, what are not the Hudson's Bay Company enabled to do, with every advantage on their side, would they prosecute the trade with vigour?

York Fort at this time has four subordinate settlements; at which settlements, conjointly, the Company allow one hundred servants, whose wages amount to about one thousand eight hundred and fixty pounds per annum; besides a sloop of fixty tons, that makes a voyage once a year between York Fort and Severn Factories. In the year 1748, the complement of men at that settlement was no more than twenty-five, whose wages amounted to four hundred and seventy pounds per annum, and the trade then stood at thirty thousand skins one year with another. The other establishments which the Company maintain in the Bay, have suffered the like proportional change, all decreasing in trade, and bearing additional incumbrances.

To exhibit at one view a flate of their feveral establishments in the Bay at prefent, the sellewing table is subjoined.

himended to keep up the appearance of a regular fettled plan of though this farce may be played off to those who have not had the beauties of knowing the deception, it will not have that effect upon any way acquainted with the business.

of the tents; while the leaders smoke together, and regulate the procession. This being settled, they re-embark, and soon after snive at the factory. If there is but one captain, his situation is in the center of the canoes; if more, they place themselves on the wings; and their canoes are distinguished by having a small stage has shad on a stick, and placed in the stern.

When they arrive within a few hundred yards of the fort, they discharge their fowling-pieces, to compliment the English ; who, in return, falute them by firing two or three small cansen. The leaders feldom concern themselves with taking out the bundles, but the other men will affift the women. The factor being informed that the Indians are arrived, fends the trader to introduce the leaders with their lieutenants, who are usually their elden fons or nearest relations. Chairs are placed for them to fit down on, and pipes, &c. are introduced. During the time the leader is fmoking, he fays very little, but as foon as this is over, he begins to be more talkative; and fixing his eyes maoveably on the ground, he tells the factor how many canoes has brought, what Indians he has feen, afks how the Englithmen do, and fays he is glad to fee them. After this the governor bids him welcome, tells him he has good goods and plenty, and that he loves the Indians, and will be kind to them. The pipe is by this time removed, and the conversation becomes free.

During this visit, the chief is dress out at the expense of the satory in the following manner: a coarse cloth coat, either red to blue, lined with baize, and having regimental custs; and a wastcoat and breeches of baize, the whole ornamented with orns lace. He is also presented with a white or check shirt; his stockings are of yarn, one of them red, the other blue, and tied below the knee with worsted garters; his Indian shoes are sometimes put on, but he frequently walks in his stocking set; his hat is coarse, and bedecked with three offrich feathers of various colours, and a worsted sash tied round the crown; a small sik handkerchief is tied round his neck, and this completes his dress. The lieutenant is also presented with a coat, but it has no lining; he is likewise provided with a shirt and cap, not unlike those worn by mariners.

The guests being now equipped, bread and prunes are brought and set before the captain, of which he takes care to fill his pockets, before they are carried out to be shared in his tent; a two gallon keg of brandy, with pipes and tobacco for himself and followers, are likewise set before him. He is now conducted from the fort to his tent in the following manuer: In the stant

a halberd and enfign are carried; next a drummer beating a march # then several of the factory servants bearing the bread, prunes, pipes, tobacco, brandy, &c. Then comes the captain, walking quite creek and it itely, smoking his pipe, and conversing with the factor. After this follows the lieutenant, or any other friend, who had been admitted into the fort with the leader. They find the tent ready for their reception, and with clean pine-brush and beaver coats placed for them to fit on. Here the brandy, &c. is deposited, and the chief gives orders to some respectable person to make the usual distribution to his comrades. After this the factor takes his leave, and it is not long before they are all intoxicated; when they give loofe to every species of disorderly tumult, fuch as finging, crying, fighting, dancing, &c. and fifty to one but fome one is killed before the morning. Such are the fed effects of the vile composition they are furnished with, upon these occasions.

After continuing in a flate of intoxication, bordering on madness, for two or three days, their mental faculties return by degrees, and they prepare themselves for renewing the league of friendship, by smoking the calimut; the ceremony of which is as follows: A pipe made of stone is filled with Brazil tobacco. mixed with a herb tomething like European box. The stem of the pipe is three or four feet long, and decorated with various pieces of lace, bears claws, and eagles talons, and likewife with variegated feathers, the spoils of the most beauteous of the feathered tribe. The pipe being fixed to the stem and lighted, the factor takes it in both his hands, and with much gravity riles from his chair, and points the end of the stem to the East, or fun-rife, then to the Zenith, afterwards to the West, and then perpendicularly down to the Nadir. After this he takes three or four hearty whists, and having done so, presents it to the Indian leader, from whom it is carried round to the whole party, the women excepted, who are not permitted to fmoke out of the facred pipe. When it is entirely throaked out, the factor takes it again, and having twinled it three or four times over his head, lays it deliberately on the table; which being done, all the Indians return him thanks by a kind of fighing out the word-

Though the above ceremony made use of by the Indians, in smoking the calimut, may appear extremely ridiculous and incomprehensible, yet, when we are made acquainted with their ideasin this respect, the apparent absurdity of the custom will vanish. By this ceremony they mean to signify to all persons concerned,

that whilst the sun shall visit the different parts of the world, and take day and night; peace, firm friendship, and brotherly love, shall be established between the English and their country, and the same on their part. By twirling the pipe over the head, they sather intend to imply, that all persons of the two nations, therefore they may be, shall be included in the friendship sather therefore now concluded or renewed.

After this ceremony is over, and a further gratification of bred, prunes, &c. is prefented, the leader makes a speech, generally to the following purport:

"You told me last year to bring many Indians to trade, which I promised to do; you see I have not hed; here are a great many young men come with me; use them kindly, I say; kt them trade good goods; let them trade good goods, I say! We lived hard last winter and hungry, the powder being short mediare and bad; being short measure and bad, I say! Tell your fervants to fill the measure, and not to put their thumbs within the brim; take pity on us, take pity on us, I fay! We piddle a long way to ice you; we love the English. Let us inde good black tobacco, moist and hard twisted; let us see it before it is opened. Take pity on us; take pity on us, I fay! The guns are bad, let us trade light guns, finall in the hand, and well shaped, with locks that will not freeze in the winter, and red gun cases. Let the young men have more than measure d tobacco; cheap kettles, thick, and high. Give us good wasture of cleth; let us see the old measure; do you mind me? The young men prove they love you, by coming to far to fee pos; take pity, tike pity, I say; and give them good goods; by like to dress and be fine. Do you understand me?"

As foon as the captain has finished his speech, he, with his followers, proceed to look at the guns and tobacco; the sormer they examine with the most minute attention. When this is swerthey trade their surs promittuously; the leader being so far induged, as to be admitted into the trading room all the time, the defires it.

It is evident that the fur and politry trade might be carried on a much greater extent, were it not entirely in the hands of exclusive company, whose interested, not to say imquitous has been the subject of long and just complaint.

will, we doubt not, feem very mysterious to the generality people, that the company do not exert themselves to turn in riches of this country to their advantage, when they alone to reap the benefit of their exertions. People will naturally

be led to conclude from their conduct, that what writers have faid on this subject is devoid of truth, and mere chimeras; but this is for want of knowing the peculiar views of the company their affection for their long fostered monopoly, and that fingular obfenrity which invelopes their whole constitution, may the whole of their mercantile transactions.

The company do not entertain the least doubt, but if the country they policis was properly explored by persons of ability. valuable discoveries might be made; but this they think may be fo far from redounding to their interest, that it might have contrary effect, by encouraging adventurers to petition for liberty to putake of these discoveries, and thereby occasion and would probably flake the inveiligation to take plan not all; as the compan > foundation of their char rions; this fmall number confilts at prefent but fhare a comfortable divia 16/9 think, that as long as ir embarking in additional dend, there is no occasion overies which might transexpenses, in order to whole, omprize a very confiderable The limits of the bay

pire to the world, and parts, is capable of much extent; the foil of wh inaprovement by agriculture and indu try. The countries abound with most kinds of quadrupeds, &c. whole skins are of great value. The numerous inland rivers, lakes, &c. produce fish of almost every species; and in the seas in and about the straits, and the northern parts of the bay, white and black whales, feahouses, bears, and feals, are killed in great numbers by the E.quimaux, whole implements for this purpole are exceedingly fample. What advantage might not then wrife to the nation from this branch of trule alone, were it hid open? If able harpeoners were lent on this employ, with fafficient affiftants, and properly encouraged, greater profits would accrue from this filliery, than from all the peltry at prefent imported by the company. The furrounding country, which at prefent is entirely unknown to us, would, in all likelihood, be the confequence of thele less being more frequented than they are. And indeed if ever the facts and lettlements on the American boundary line are Intrendited according to the treaty of peace, England has no other means in her hands to counterpoile the superior advantages the Americans will then pollets in the fur trade, than to throw the trade to Huddon's bay open, and thus destroy a difgraceful monopoly, or to incorporate with it by a new charter the mer-Times trading to Canada, and thus infule into it a fiesh portion

wery confined manner in which the company earry is it is far from being inconfiderable in value, though the liderable and the purpose of the with the Esquimaux; they employ three ships annually, ich are manned with seventy-sive men.

The company exports commodities to the value of about ten teland strends, and bring home returns to the value of they-mine thousand three hundred and forty pounds, which H to the revenue about three thousand seven hundred and ity-four pounds. This includes the fishery in Hudson's bay. this commerce, small as it is, affords immense profits to the apany, and even some advantages to Great-Britain in general, mot be denied; for the commodities exchanged with the tims for their fkins and furs, are all manufactured in Britain; the Indians are not very nice in their choice, such things that of which there is the greatest plenty, and which, to use netreantile phrase, are drugs. Though the workmanship hapto be in many respects so deficient, that no civilized people sald take it, it may be admired among the Indians. On the har hand, the tkins and furs brought home in return afford ichs for trading with many nations of Europe to great adthese. These circumstances prove the immense benefit that wild redound to Britain, by throwing open the trade to Hudthat bav. fince even in its present restrained state it is so advan-

TION, EXTENT, AND BOUNDARIES.

THESE Expenses of the second o

Not withfiarding the feelidding appearance of this country, it was here that some of the first European settlements were made. I am first grant of lands in it was given by James the First to his secretary. Sir William Alexander, from whom it had the name of Nova bootia, or New-Scotland; since then it has frequently changed hands, from one private proprietor to another, and from the French to the English nation backward and forward. It was not confirmed to the English, till the peace of Utrecht, and their design in acquiring it does not seem to have arisen so much from any prospect of direct profit to be obtained by it, as from an apprehension that the French, by possessined by it, as from an apprehension that the French, by possessing this province, might have had it in their power to annoy the other British settlements. Upon this principle, three thousand samilies were transported in \$749, at the charge of the government, into this country; who built and settled the town of Halisax.

"-e traft of country within these limits, known by the name a-Scotia, or New-Scotland, was, in 1784, divided into

fwo provinces, viz. New-Brunswick, on the north-west, and Nova-Scotia, on the south-east. The former comprehends that part of the old province of Nova-Scotia, which lies to the northward and westward of a line drawn from the mouth of the river St. Croix, through the center of the bay of Fundy to bay Verte, and thence into the gulf of St. Lawrence, including all lands within fix leagues of the coast. The rest is the province of Nova-Scotia, to which is annexed, the island of St. John's, which lies both of it, in the gulf of St. Lawrence.

SOIL, PRODUCTIONS, &c.

During a great part of the year, the atmosphere is clouded with thick fog, which renders it unhealthy for the inhabitants; and four or five months it is intensely cold. A great part of this country lies in forest, and the soil, in many parts, is thin and buren. On the banks of the rivers, however, and some other parts, the soil is very good, producing large crops of English grass, hemp, and slax: many of the bays, and salt water rivers, and some parts of the sea coast, are bordered with fine trasts of salt marsh; but the inhabitants do not raise provisions enough for home consumption.

RIVERS, BAYS, LAKES AND CAPES.

The rivers which water this country we shall mention in conastion with the different counties in which they principally low, a few, however, call for separate notice. The rivers Risconge and Nipisiguit run from west to east into Chaleur and Nipiliguit bays, which communicate with the gulf of St. Lawtence. The river St. Croix (which is the true St. Croix is yes undetermined) empties into Passamaquoddy bay, and forms a put of the boundary between New-Brunswick and Maine. St. John's is the largest river in the province. It empties into the north fide of the bay of Fundy, and is navigable for veffels of thy tons, fixty miles, and for boats upwards of two hundred wies. This is a common route to Quebec. The banks of this iver, enriched by the annual freshets, are excellent land. About thirty miles from the mouth of this river commences a fine level country, covered with large trees of timber of various hads. Masts, from twenty to thirty inches in diameter, have less cut on this tract. The tide flows, in this river, eighty or thety miles. It furnishes the inhabitants with falmon, bass, and flurgeon. Near fort Howe, the river fuddenly narrows, ed occasions a fall at certain times of tide, like that at London Bridge.

The coast of these provinces is indented with numerous beyon and commodious harbours. The principal, as you descend foutherly from the mouth of St. Lawrence river, are Gaspee, Chalcur, Verte, which is separated from the bay of Fundy by a narrow isthmus of about eighteen miles wide; cape and harbour of Canfo, forty leagues eastward of Halifax. Chedabucto bay about ten leagues north-west of Canso. Chebucto bay, on which stands the town of Halifax. The bly of Fundy, which extends fifty leagues into the country, in which the ebb and flow of the tide is from forty-five to fixty feet. Chenigto bay is at the head? of Fundy bay. Passamaquoddy bay borders on the district of Maine, and receives the waters of St. Croix river. At the entrance of this bay is an island, granted to several gentlemen in Liverpool in Lancashire, who named it Campobello. At a very considerable expense, they attempted to form a settlement there, but failed. On several other islands in this bay there are settlements made by people from Massachusetts. Among the lakes in these provinces, which are very numerous, and many as yet without names, is Grand lake, in the province of New-Brunf. wick, near St. John's river, about thirty miles long, and eight or ten broad, and in some places forty fathoms deep.

The principal capes are cape Canfo, on the west side of the entrance into Chedabucto bay, and cape Sables, on the east side of the entrance into the bay of Fundy.

PRINCIPAL TOWNS.

HALITAX is the capital of the province of Nova-Scotia. It flinds on Chebusto bay, commodiously situated for the fishery, and has a communication with other parts of this province and New-Bruntwick by land and water carriage. It has a good harbour, where a small squadron of ships of war lie during the winter, and in the summer protests the fishery. The town has an entrenchment, and is strengthened with forts of timber. It is said to contain sisteen or sixteen thousand inhabitants.

Shelburne on port Roseway, near cape Sables, was supposed, in 1783, to contain fix hundred families; since that time it has become less populous. Guysborough formerly called Minchester, situated on Chedabusto bay, about ten leagues north-well of cape Canso, contained, in 1783, about two hundred and sifty families. Rawdon forty miles from Halifax, has about fixty houses. Annapolis on the east side of Fundy bay, has one of the sinest harbours in the world. In other respects it is a poor, inconsiderable place.

FREDERICATIONS, about nincty miles up St. John's river, is the capital of the province of New-Brunfwick.

FORTS.

There are feveral forts in these provinces: these are fort Edward at Windtor, capable of containing two hundred men; Annapolis, in its present state, one hundred: Cumberland, three hundred; fort Howe, on St. John's viver, one hundred: besides which there are barracks, inclosed in a stockade at Comwahis, for about litty men.

TRADE.

The exports from Great-Britain to this country confift chiefly of inten and worlien cloths, and other necessaries for wear, of sisting tackle, and rigging for ships. The amount of exports, at an average of three years, before the new settlements, was about twenty-fix thousand five hundred pounds. The only articles obtained in exchange are, timber and the produce of the sistency, which, at a like average, amounted to thirty-cight thousand pounds. But from the late increase of inhabition, it is supposed that they will now erect saw mills, and endeavour to supply the West-India islands with lumber of every kind, as well as the produce of the sistery, which will be a productle article to both countries. The whole population of

Nova-Scotia and the islands adjoining, is estimated at fifty thoufind. This estimate it is supposed is considerably too large, Recent accounts of these settlements represent them as in a declining state, having great numbers of the houses built in the new towns uninhabited, and considerably reduced in value.

INDIANS, &c.

The Indians here are the Micmacks, and the tribe called the Mirchites. The former inhabit the eastern shore, between Halifax and cape Breton; between Cumberland county and the north-east coast of the province, towards Chaleur bay; about the heads of the rivers which run through the counties of thans and King's county; and between cape Sable and Annapois royal. This tribe is supposed to have about three hundred setting men. The Marechites inhabit the river St. John, and amound Passanaquoddy bay, are estimated at one hundred and sony sighting men; they are much superior in all respects to the Micmacks.—The animals are the same as in the United States, though much less numerous.

ISLAND OF SAINT JOHN.

This island lies in the gulf of St. Lawrence, near the northern coast of the province of Nova-Scotia, and is about fixty miles long, and thirty or forty broad. It has several fine rivers, a rich foil, and is pleasantly situated. Charlotte-town is its principal town, and is the residence of the lieutenant-governor, who is the chief officer on the island. The number of inhabitants are estimated at about five thousand. Upon the reduction of cape Breton in 1745, the inhabitants of this island, amounting to about four thousand, submitted quietly to the British sins. While the French possessed this island, they improved a to so much advantage, that it was called the granary of Canada which it furnished with great plenty of corn, as well as beef ad pork. It is attached to the province of Nova-Scotia.

(44)

NEWFOUNDLAND ISLAND.

NEW FOUNDIAND is fituated to the east of the gulf of St. Lawrence, between forty-fix and fifty-two degress of north latitude, and between fifty-thice and fifty-nine degrees weft lengitude, teparated from Labrador, or New-Britain, by the straits of B. Heifle; and from Cinada, by the bay of St. Lawrence; being five hundred and fifty miles long and two hundred broad. The coalls are extremely lubject to fogs, attended with almost continual florms of snow and fleet, the fky being usually overcast. From the foil of this island the British reap no great advantage, for the cold is long continued and severe; and the fummer heat, though violent, warms it not enough to produce any thing valuable; for the foil, at least in those parts of the ifland which have been explored, is rocky and barren; however, it is watered by teveral good rivers, and has many large and good harbours. This island, whenever the continent shall come to fall of timber convenient to navigation, which on the fea comb perhaps will be at no very remote period, it is faid, will afferd a large supply for masts, yards, and all sorts of lumber for the West-India trade. But what at present it is chiefly valuable for, is the great fifthery of cod carried on upon those shoals, which are called the banks of Newfoundland. Great-Britain and North-America, at the lowest computation, annually employ three thousand full of finall craft in this fishery; on board of which, and on shore to cure and pack the fish, are upwords of one hundred thouland hands; so that this fishery is not only a valuable branch of trade to the merchant, but a fource of livelihood to fo many thousands of poor people, and a most excellent nursery for feamen. This fifthery is computed to increase the national flock three hundred thousand pounds a year in gold and filver, remitted for the cod fold in the north, in Spain, Fortugal, Italy, and the Levant. The plenty of cod, both on the great bank and the leffer ones, which lie to the east and fourth-cast of this illand, is inconceiveable; and not only cod, but leveral other species of fish, are caught there in abundance; all of which are nearly in an equal plenty along the fineres of Newfoundland, Nove-Scotia, New-England, and the iffe of cape Breton; and very profitable fisheries are carried on upon all their coafts.

to enjoy the fisheries on the north and on the island; and the inhabitants of the United interest are allowed the fame privileges in fishing as before their adependence. The chief towns in Newfoundland are, Planuti, Ronavista, and St. John's: but not above one thousand insides remain here in winter. A small squadron of men of war as fint out every spring to protect the sisheries and inhabitants, the staired of which, for the time being, is governor of the lind, besides whom there are two lieutenant-governors, one at lieuten, and the other at St. John's.

GENERAL DESCRIPTION

0 7

GREENLAND.

CREENLAND is a general name by which is now denothe most easterly parts of America, stretching towards the no pole, and likewise some islands northward of the continent Europe, lying in very high latitudes. The whole of this cotry was formerly described as belonging to Europe, but from contiguity to, and probable union with the American contine it appears most proper to be classed among the countries beloing to the latter; we therefore have sollowed Mr. Morse, a placed it among the divisions of North-America.—It is divisinto two parts, viz. West and East Greenland, of each west here give a description from the best authorities extant.

WEST GREENLAND.

THIS country is now laid down, in our latest maps, as part the continent of America, though on what authority is not validar.*

Whether Greenland is an island, has not yet been decided, as no ship penetrated higher than the seventy-eighth degree, on account of the ice. The is not an island, but a part of the American continent, is rendered probatiff. Because Davis' straits, or rather Bassin's Bay, grows narrower and narrowards the seventy-eighth degree north.—ad. Because the coast, which in a places is very high towards the sea, grows lower and lower northward.—ad. cause the tide, which at cape Farewell, and as for up as Cockin's sound, is sixty-sists degree of latitude, rises eighteen seet at the new and full moon, reads to the northward of Disko, so that in the secunitist degree of latitude.

It is a very mountainous country, and fome parts of it so high that they may be discerned thirty leagues off at sea. The inland mountains, hills, and rocks are covered with perpetual snow; but the low lands on the season with inlets, bays, and large rivers; and is surrounded with a vast number of islands of different dimensions. In a great many places, however, on the eastern coast especially, the shore is inaccessible by reason of the floating mountains of ice. The principal river, called Baal, falls into the sea in the sixty-sourth degree of latitude, where the first Danish lodge was built in 1721; and has been navigated above forty miles up the country.

West Greenland was first peopled by Europeans in the eighth century. At that time a company of Icelanders, headed by one Ericke Rande, were by accident driven on the coast. On his return he represented the country in such a favourable light, that some families again followed him thither, where they soon became a thriving colony, and bestowed on their new habitation the name of Groenland, or Greenland, on account of its verdant appearance. This colony was converted to Christianity by a missionary from Norway, sent thither by the celebrated Olaf, the first Norwegian monarch who embraced the Christian religion. The Greenland settlement continued to increase and thrive under his protection; and in a little time the country was provided with many towns, churches, convents, bishops, &c. under the jurisdiction of the archbishop of Drontheim. A considerable commerce was carried on between Greenland and Norway; and a regular intercourse maintained between the two countries till the year 1406, when the last bishop was sent over. From that time all correspondence was cut off, and all knowledge of Greenland has been buried in oblivion.

E files little more than eight feet, and probably continues to diminish, till there is no tide at all. To which may be added the relation of the Greenlanders, which however cannot be much depended on, viz. that the strait contracts it set to merow at last, that they can go on the ice so near to the other side, as to be she to call to the inhabitants, and that they can strike a fish on both sides at time; but that there runs such a strong current from the north into the strait, that they cannot pass it.

Eilis's voyage to Hudfor's bay for the discovery of a north-west hasage.

This strange and abrupt cossation of trade and intercourse been attributed to various causes; but the most probable is following: The colony, from its first settlement, had been France raffed by the natives, a barbarous and favage people; agreeang in cultoms, garb, and appearance, with the Efquimaux forand about Hudion's bay. This nation, called Schrellings, at lemeth prevailed against the Iceland settlers who inhabited the western diffriet, and exterminated them in the fourteenth century : "Infomuch, that when their brethren of the eastern district came to their affiftance, they found nothing alive but some cattle and flocks of sheep running wild about the country. Perhaps they themselves afterwards experienced the same sate, and were totally deflioved by these Schrellings, whose descendants still inhabit the western parts of Greenland, and from tradition confirm this conjecture. They affirm that the houles and villages whose rains fill appear, were inhabited by a nation of ftran-s gers, whom their ancestors destroyed. There are reasons, however, for believing that there may be still fome descendants of the ancient Iceland cellmy remaining in the eaftern diftrict, though they cannot be writted by land, on account of the stuped- i dous mountains, perpetually covered with fnow, which divide the two puts of Greenland; while they have been rendered inaccefible by ica, by the vast quantity of ice driven from Spitzbergen, or East Greenland. One would imagine that there must have been some considerable alteration in the northern parts of the world fince the fifteenth century, fo that the coaft Greenland is now become almost totally inaccessible, though formerly visited with very little difficulty. It is also natural to ask, by what means the people of the castern colony surmous sized the above-mentioned obitacles when they went to the affice and of their western friends; how they returned to their own count tiv; and in what manner historians learned the fuccess of effect expedition? Concerning all this we have very little fatisfactor information. All that can be learned from the most authorized records is, that Greenland was divided into two diffricts, call Well-Bygl and East-Bygd: that the western division contains four parities and one hundred villages: that the eastern dift. was fill more flourishing, as being nearer to Iceland, for fettled, and more frequented by fhipping from Norway. The are also many accounts, though most of them romantic and sligs ly attested, which render it probable that part of the cafte colony fill fublifts, who, at some time or other, may have give = the imperfect relation above mentioned. This colony, in ancies lively by the kings of Denmark in order to discover the calla diffrict; but all of them miscarried. Among the enderge ters, Mogens Heinfon, after having furm surrounce and additional. mand dangers, got fight of the land; which, he wever, he could tapproach. At his return he pretended that the flun was effed in the middle of her course by certain rocks of loadas at the bottom of the sea. The same year, 1576, in which sattempt was made, has been rendered remarkable by the rage of Captain Martin Frobifher, fent upon the fame creand Queen Elizabeth. He likewise descried the land; but could treach it, and therefore returned to England; yet not before had failed fixty leagues in the strait, which still retains his e, and landed on several islands, where he had some comnication with the natives. He had likewise taken possession the country in the name of Queen Elizabeth; and brought ry fome pieces of heavy black stone, from which the refiners London extracted a certain proportion of geld. In the enig spring he undertook a second voyage, at the head of a I fquadron, equipped at the expense of the public, entered fraits a fecond time; discovered upon an itland a gold and ir mine ; .bestowed names upon different bays, islands, and I-lands; and brought away a lading of error together with natives, a male and female, whom the English hishapped. nch was the fuccels of this voyage, that another arms and fixed out under the suspices of Admiral Probabler, e. a. at of fifteen fail, including a confiderable number of fail. .

as he could procure, of this they obtained large quantities of a new mine, to which they gave the name of the Counter Suffex. They likewife built an house of stone and lime, pr ed with over s; and here, with a view to conciliate the affe of the natives, they left a quantity of small morrice-bells, kr beads, looking-glaffes, leaden pictures, and other toys, tog with several loaves of bread. They buried the timber of fort where it could be easily found next year; and fowed peale, and other grain, by way of experiment, to know the country. Having taken thefe precau beginning of September they failed I after a month arrived in England: but noble defign a k, being defirous of dife Christian II ing the old G fent three fhips thither, u the command Lindenow, who is faid to reached the e nd, where he traded wit

lavage inhabit are fill found in the widifirit, but faw no sound a civilized people. Had he adlanded in the castern division, he must have perceived remains of the accient colony, even in the ruins of their vents and villages. Lindenow kidnapped two of the na who were conveyed to Copenhagen; and the same cruel was practifed by other two ships which sailed into I straits,* where they discovered divers fine harbours, an

* Nothing can be more inhuman and repugnant to the dicates of co juffice than this practice of tearing away poor creatures from their co their families, and connections; unless we suppose them altogether dest natural affection; and that this was not the cafe with those poor Greenl fome of whom were brought abive to Copenhagen, appears from the who of their conduct, upon their first capture, and during their confinement is mark. When first captivated, they rent the air with their cries and lamen they even leaped into the fea; and, when taken on board, for fome tim ed all fuffenance. Their eyes were continually turned towards their dea try, and their faces always builted in teats. Even the kindness of his majeffy, and the carrifes of the court and people, could not alleviate the One of them was perceived to find tears always when he faw an infor mother's arms; a circum@ance from whence it was naturally conclude he had left his wife with a young child in Greenland. Two of them tra in their little cances in hope of reaching Greenland; but one of the retaken. Other two made the fame attempt; but were driven by a flore coaft of Schonen, where they were apprehended by the peacents, and reed to Copenhagen. One of them afterwards died of a feery, consist in pearl, during the winter, for the governor of Kolding. pears in Denmark; but at length, feeing no prospect of being able t try, they lank into a kind of melancholy disold the:

initial meadows covered with verdure. In 6 me places they Flaid to have found a confiderable quantity of ore, every indred pounds of which yielded twenty-fix ounces of filver. The fime Admiral Lindenow made another veyage to the coast Greenland in the year 1606, directing his course to the willward of cape Farewell. He coafted along the flraits of Davis, and having made tome observations on the face of the identry, the harbours and islands, returned to Denmark. Easten Richards, being detached with two falps on the fame Movery, described the high land on the eastern tide of Greenhad, but was hindered by the ice from approaching the thore. Other expeditions of the fame nature have been planned and executed with the same bad success, under the auspices of a Draith company of merchants. Two ships returned from the wellers part of Greenland loaded with a kind of yellow land, supposed to contain a large proportion of gold. This being lived by the goldfiniths of Copenhagen, was condemned as stick, and thrown overboard; but from a finall quantity of his fand, which was referved as a euriofity, an expert chemil afterwards extracted a quantity of pure gold. The captain, brought home this adventure, was to chagrined at his ppointment, that he died of grief, without having left any concerning the place where the fand had been dia owied. In the year 1654, Henry Moller, a tich Dane, equipped a veilel under the command of David de Nelles, who tailed to the west coast of Greenland, from which he carried off women of the country. Other efforts have been made, mer the encouragement of the Danish king, for the discovery med recovery of the old Iceland colony in Greenland; but all them milcarried, and people began to look apon fuch expetions as wild and chimerical. At length the Greenland commay at Bergen in Norway, transported a colony to the western ma, about the fixty-fourth degree of latitude; and thele threegins failed in the year 1712, accompanied by the Rev, Exede, to whose care, ability and precision, we owe the and mest authentic account of modern Greenland. This it can endeavoured to reach the eaftern diffrick, by confling forards, and advanced as far as the States Promoutory; but the is of the year, and continual florms, obliged him to return ; as he could not even find the first of Frobliber, he conhaled, that no fuch place ever existed. In the year 1724, . being equipped by the company, failed on this difference, the view to land on the cast side opposite to Iceland a but

in small ve fels, between the great fiskes of as the Greenlanders have declared, that the ruthing from the boys and inlets, and runni along the floore, binder the ice from ather that there is always a channel open, throughfinall burden might pass, especially if lodges night didunces on the floore, for the convenion the adventurers.

That part of the country which is now vi the Danes and Norwegians, lies between th fixty-eighth degrees of north latitude; and th commate is temperate. In the fummer, which end of May to the middle of September, the and comfortable, while the wind blows cafte at this time florms frequently happen, which ble violence; and the fea coasts are infested w equally differeeable and unhealthy. Near the hays and inlets, the low land is clothed with t verdure; but the inland mountains are perpetu ce and fnow. To the northward of the fixty stitude the cold is prodigiously intenfe; and f August all the coast is covered with ice, w ill April or May, and fometimes not till the la lothing can exhibit a more dreadful, and a con-

or or cattle; and that confiderable quantities of s' were experted to Norway; and, on account Fir excellency, fet sport for the king's use. The inform us, that some parts of the country yielded stellent wheat; and that large oaks were found here, which scorns as big as apples. Some of these oaks still remain The fourthern parts, and in many places the marks of ploughed Wire eafily perceived: at present, however, the country is stipte of corn and cattle, though in many places it produces ittlehi pasture, and, if properly cultivated, would probably grain also. Mr. Egede sowed some barley in a bay adjointhe Danish colony; it sprang up so fast, that by the latter Rof July it was in the full ear; but being nipped by a night the never arrived at maturity. This feed was brought from where the fummer is of greater heat and duration than Citenland; but in all probability the corn which grows in Fibithern parts of Norway would also thrive here. Turnips Tideworts of an excellent taste and slavour are also produced The fides of the mountains near the bays are clothed wild thyme, which diffuses its fragrance to a great distance. formentil is very common in this country, and likethiny others not described by the botanists. Among the "of Greenland we number juniper-berries, blue-berries, ties and bramble-berries.

at well with the most northern parts are tot cases and plants. The wretched inhabitants a mifferent quantities to stuff into their shoes t at which the obliged to buy it from these voice southern parts.

The animals which abound most in Greenland cos, hares, dogs and white bears. The heres four and very far; the foxes are of different a cycle and bluech, and smaller than those of uway. The natives keep a great number of large, white or speckled, and rough, with tight, as is the case with all the dogs pecul cos; they are timorous and stupid, and nest k, but sometimes howl dismally. In the nort was yoke them in sledges, which, though heave draw on the ice at the rate of seventy millustrates day. These poor animals are very illustrates, being less to provide for themselves, matters happen to catch a great number of seconds the dogs are regaled with the blood

her times they lubid, like wild beafts, upon is. Here are also found great pumpers for

ire subject to a weakness in the eyes, occasionpring winds and the glare of the snow in the the leproly is known among them but is not con-Those that dwell in the northern parts are miserably sted with dyfenteries, rheums, and pulmonary disorders, and epilepsy. The small-pox being imported among from Copenhagen in the year 1734, made terrible havoc thele poor people, who are utterly destitute of any ledge of the medicinal art, and depend entirely for ace upon their angekuts or conjurers. In their disposithe Greenlanders are cold, phlegmatic, indolent and flow prehension, but very quiet, orderly and good-natured: live peaceably together, and have every thing in common, the fife, envying or animofity; they are civil and stable, but flovenly to a degree almost beyond the Hotthemselves; they never wash themselves with water, their paws like the cat, and then rub their faces with They eat after their dogs without washing their evour the lice which devour them; and even lick the which they scrape off from their faces with their knives. wash themselves with their own urine, which they makes their hair grow, and in the winter-time go out immefiler, to let the liquor freeze upon their skin. They Ada est their victuals off the dirty ground, without any

GENERAL DESCRIPTION OF

լ5

they still retain an aversion to tobacco and spirituous liques in which particular they differ from almost all savages on t face of the earth.

The Greenlanders commonly content themselves with a wife, who is condemned, as among other favage nations, to all the drudgery, and may be corrected, or even divorced, the hulband at pleasure. Heroes, however, and extraordina personages, are indulged with a plurality of wives. Their you women are generally chafte and bashful; but at some of the feelts, in the midth of their jollity, a man retires with his neig bom's wife behind a curtain made of skins; and all the gues thus coupled, retire in their turns. The women think ther felves happy if an angekut or prophet will thus honour the with his carefles. These people never marry within the proh bited degrees of contanguinity, nor is it counted decent in couple to marry who have been educated in the fame family They have a number of ridiculous and superfittious customs among which the two following are the most remarkable:-While a woman is in labour, the goffips hold a chamber-pe over her head, as a chaim to hanen the delivery. When the child is a year old, the mother licks and flabbers it all over, & render it, as the imagines, more flrong and hardy.

Ail the Greenlanders hitherto known, fpeak the fame language though different dialects prevail in different parts of the cour tive it abounds with double confonants, and is fo guttural, that the pronunciation of many words is not to be learned except b those who have been accustomed to it from their infancy. letters C, D, F, Q and X, are not known in their alphabet Like the North-Americans, and inhabitants of Kamichatka, the have a great number of long polytyllables. Their words, noun as well as verbs, are inflected at the end by varying the terms nations without the help of articles; but their language being found defective, they have adopted a good many words from the Norwegian dialect. Notwithstanding the endeavours of the Danish millionaries, they have no great reason to boast of the profesytes they have made of the natives of Greenland. lavages pay great deference and respect to the Danes, whom in doed they obey as their mallers, and hear the truths of the Christian religion expounded without doubting the veracity of their reachers; but at the fame time they liften with the mode mortifying indeference, without being in the least influenced by what they have beard. They believe in the immortality of the fool, and the existence of a spirit whom they call Toingarbut of whom they have formed the most ridiculous. The Angeluts, who are supposed to be his imme-

first millionaries among the Greenlanders entertained a doubt whether any conception of a Divine Being, as they had no word in their landware to defignate him. When they were asked who made the heaven a, and all visible things? their answer was—"We know not; or, or know him; or, it must have been some mighty person: or, things, are been as they are, and will always remain so." But when they unterplanguage better, they found they had some vague notions conthe soul and spirits, and were solicitous about the state after death. It lent also that they had some saint conceptions of a Divine Being.

clieve in the doctrine of the transmigration of fouls-that the foul is a effence quite different from the body-that it needs no corporeal that it survives the body, and lives in a future better state, which we will never end. But they have very different ideas of this flate, ace their Elyfium in the abysses of the ocean, or the bowels of the d think the deep cavities of the rocks are avenues leading to it. There Torogarfock and his mother; there a joyous fummer is perpetual, and a fon is obscured by no night; there is the limpid stream, and abundance is, filhes, rein-deer, and their beloved feals, and their are all to be without toll, day, they are even found in a great kettle boiling alive. thefe delightful feats none must approach but those who have been dexad diligent at their work, (for this is their grand idea of virtue) that colormed great exploits, and have maftered many whales and feals, have tone great hardships, have been drowned in the fea, or died in childhed. sembodied spirit does not enter dancing into the Elysian fields, but must be whole days, some say longer, in sliding down a rugged rock, which thy imeared with blood and gore. Those unfortunate fouls which are to perform this rough journey in the cold winter, or in boilterous weaexpeculiar objects of their pity, because they may be easily destroyed on d, which destruction they call the second death, and describe it as a exunction, and this, to them, is the most dreadful consideration. Therewing thefe five days or more, the furviving relations mult abiliain from bests, and from all noify work, except the necessary fifting, that the foul be diffurbed or perish in its perisons passage. From all which, it is the Greenlanders, flupid as they have been reprefented, have an the good will be rewarded, and the bad punished, and that they conborror at the thought of the entire annihilation of the foul.

but their paradife among the releffial bodies, and they imagine their foresty and rapid, that the foul selfs the same evening in the manter moon, who was a Greenlander, and there it can dance and play at the reft of the fouls; for they think the northern lights to be the dance fouls. The fouls in this paradife are placed in term round a selfading with fifth and fow). When this lake overflows it rains on the best heald the dam once break, these would be a general delage. fide are the windows, covered with the skins of feals of religious. Several families live in one of these houses, possessing each a separate apartment, before which is a hearth with a great lamp placed on a trevit, over which hangs their kettle; above is a rack or shelf on which their wet clothes are dried. They burn train oil in their lamps, and for a wick they use a kind of moss, which fully answers the purpose. These lamps are not only fusicient to boil their victuals, but likewise produces such a best, that the whole house is like a bagnio. The door is very low, that as little cold air as possible may be admitted. The house within is lined with old skins, and surrounded with benches for the conveniency of strangers. In the summer time they dwell in tents made of long poles fixed in a conical form, covered in the inside with deer skins, and on the outside with seals skins, dressed so as that the rain cannot pierce them.

EAST GREENLAND,

Enfl-Greenland was for a long time confidered as a part of the continent of West Greenland, but is now discovered to be an affemblage of islands lying between 76° 46' and 80° 30' of north latitude, and between 9° and 20° of east longitude. It was discovered by Sir Hugh Willoughby in the year 1553, who called it Greenland, supposing it to be 2 part of the westerns; continent. In 1595, it was again visited by William Barents and John Cornelius, two Dutchmen, who pretended to be the caiginal discoverers, and called the country Spitzbergen, or

Furopeans live there, fo that these parts are but little known. The European colonies have fixed themselves so the northward of the fixty-second degree of a latitude.

A factor, who lived many years in the country, and whose accuracy, as far a the subject will admit, may be depended on, sound, in the compass of forty inagms, which was the cruie of his dealings, nine hundred and sitty-seven conflare residents insides occasional visitors. This part of Greenland is the most populous, except Disco bay, which is the best place for trade, and the fouthers parts. In other places an individual may travel fixty miles and inperment with a single person. Suppose, however, that the country is inhabited to the space of four hundred leagues, and that there are one thousand sould be ten thousand. The above-ment medication in its, that there are not more than seven thousand, because there are no many distributed to thirty thousand; and when he made his sirst calculation in 1740, there were still twenty thousand: consequently, since that time, their rambes has dimonished at leaf one-half.

eccourred, they leap into the sea, and begin to slice off the even under water, before the whale is dead. They have different ways of killing feals; namely, by striking them a finall harpoon equipped also with an air bag; by watchthem when they come to breathe at the air-holes in the ice. biking them with spears; by approaching them in the distheir own species, that is, covered with a seal skin, creping upon the ice, and moving the head from fide to fide as the feals are accustomed to do. By this stratagem the Greenfunder moves towards the unsuspecting seal, and kills him with * spear. The Greenlanders angle with lines made of whalebone cut very small, by mean's of which they succeed wonderfully. The Greenland canoe, like that used in Nova-Zembla and Hudfon's bey, is about three fathoms in length, pointed at both ends, and three quarters of a yard in breadth; it is composed of thin rafis fastened together with the sinews of animals. It is covered with dreffed feal-fkins both below and above, in such a minner the only a circular hole is left in the middle, large enough to whit the body of one man. ' Into this the Greenlander thrusts Minfelf up to the waift, and fastens the skin so tight about him hat no water can enter. Thus secured, and armed with a padbroad at both ends, he will venture out to sea in the most Turny weather to catch seals and sea-fowl; and if he is overset, can easily raise himself by means of his paddle. A Greenlinder in one of these canoes, which was brought with him to Copenhagen, outstripped a pinnace of fixteen oars, manned with choice mariners, The kone boat is made of the fame matetials, but more durable, and to large that it will contain fifty persons with all their tackle, baggage and provisions: she is "fitted with a mast, which carries a triangular sail made of the sembranes and entrails of feals, and is managed without the dep of braces and bowlings; these kones are flat-bottomed, and foretimes fixty feet in length. The men think it beneath them take charge of them, and therefore they are left to the conof the women, who indeed are obliged to do all the didgery, including even the building and repairing their denies, while the men employ themselves wholly in preparing in hunting implements and fishing tackle.

people dwell in huts built of stone or turf; on the one

[&]quot;Most of the Greenlanders live to the fouthward of the fixty-fecond degree fourth latitude, or as the inhabitants are wont to fay, in the fouth; but no

the trade of catching whales, &c. to and from this Greenland leas; they may make bye-laws werdment of the persons employed in their ships, &c. 14 & 5 W. III. cap. 17. This company was faither enmaged by parliament in 1696; but partly by unskilful mapenent, and partly by real loifes, it was under a necessity of irely breaking up, before the expiration of the term affigued it, ending in 1707. But any person who will adventure to venland for whale-fishing, has all privileges granted to the staland company, by 1 Anne, cap. 16. and thus the trade sagain laid open. Any subjects may import whale-fins, oil, tof fish caught in the Greenland seas, without paying any bons, &c. Stat. 10 Geo. I. cap. 16. And ships employed the Greenland fishery are to be of such burden, provided th boats, fo many men, fishing lines, harping irons, &c. I be licensed to proceed; and on their return are paid twenty lings per ton bounty, for whale-fins, &c. imported; 6 Geo. cap. 38. The bounty was afterwards ingreafed, but has a lately diminished, and since this diminution the trade has resfed.

EAST AND WEST-FLORIDA.

SITUATION, BOUNDARY AND EXTENT.

AST and West-Florida are situated between 25° and 3 north latitude, and 5° and 17° west longitude from Philadelph the length is about six hundred miles, and the breadth about chundred and thirty. They are bounded north, by Georgia; exby the Atlantic ocean; south by the gulph of Mexico; west, the Mississippi; lying in the form of an L. The climate var very little from that of Georgia. Florida was first discovered 1497, by Sebastian Cabot, a Venetian, then in the English svice; whence a right to the country was claimed by the kings England; and this territory, as well as Georgia, was included the charter granted by Charles II. to Carolina. In 1512, he ever, Florida was more fully discovered by Ponce de Leon, able Spanish navigator, but who undertook his voyage from

and abfurd motives that can well be imagined. The Indians of the Caribbee islands had among them a tradition, that somewhere on the continent there was a fountain, whose waters had the property of restoring youth to all old men who tasted them. The romantic imaginations of the Spaniards were delighted with the idea. Many embarked in voyages to find out this imaginary fountain, who were never afterwards heard of. Their superstitious countrymen never imagined that these people had perished. They concluded that they did not return, only because they had drank of the immortalizing liquor, and had discovered a spot so delightful, that they did not choose to leave it. Ponce de Leon set out with this extravagant view us well as others, fully persuaded of the existence of a third world, the conquest of which was to immortalize his name. In the attempt to discover this country, he re-discovered Florida, but returned visibly more advanced in years than when he set out on his voyage. For some time this country was neglected by the Spaniards, and some Frenchmen settled in it. the new colony being neglected by the ministry, and Philip II. of Spain having accustomed himself to think that he was the sole proprietor of America, fitted out a fleet at Cadiz to destroy them. His orders were executed with barbarity; the French entrenchments were forced, and most of the people killed. The prisoners were hanged on trees, with this inscription, "Not as Frenchmen, but as heretics."

The cruelty was foon after revenged by Dominic de Gourgues, a skilful and intrepid seaman of Gascony, an enemy to the Spaniards, and passionately sond of hazardous expeditions and glory. He fold his estates, built some ships, and with a select band of adventurers, like himself, embarked for Florida. He drove the Spaniards from all their posts with incredible valour and activity, defeated them in every rencounter, and by way of retaliation, hung the prisoners on trees, with this inscription, "Not as Spaniards, but as assassing." This expedition was attended with no other consequences; Gourgues hew up the forts he had taken, and returned home, where no sotice was taken of him. It was again conquered in 1539, sy the Spaniards under Ferdinand de Soto, not without a great leal of bloodshed, as the natives were very warlike.

e vigorous refistance. The settlement, however established till the year 1665, when the town be capital of the colony while it remained ipaniards, was founded. In 1686, this plaininged by Sir Francis Drake. It met will Vol. IV.

3665, being taken and plundered by Captain Davis, and a bod of buccaneers. In 1702, an attempt was made upon it by Colo nel More, governor of Carolina. He fet out with five hundre English and seven hundred Indians; and having reached St. Au guiltine, he belieged it for three months, at the expiration of which, the Spaniards having fent some ships to the relief of the place, he was obliged to retire. In 1740, another attempt wa made by General Oglethorpe; but he being outwitted by the Spanish governor, was forced to raile the fiege with lots, and Florida continued in the hands of the Spaniards till the year y to Great-Britain. Durin 2763, when it was the last war it was a by his Catholic Majefty, and was guiranteed to the ain at the peace.

ough this territory, and fall Among the rivers ad Indian rivers are the prin into the Atlantic fi cipal. St. John's near a large (wamp, in the a northern course in a broad heart of Eaft-Flori . , in feveral places, fpreads into broad navigable flicam, bays or likes. Lake George, which is only a dilatation of the river, is a beautiful piece of water, generally about fifteen miles broad, and from fifteen to twenty feet deep. It is ornamented with feveral charming iflands, one of which is an orange grove, interfeerfed with magnelias and palm trees. Near Long Lake, which is two miles long and four wide, and which communicates with St. John's river by a fmall creek, is a vail fountain of warm. or rather hot mineral water, iffuing from a high bank on the river: it boils up with great force, forming immediately a val circular bason, capicious enough for several shaltops to ride in and runs with rapidity into the river, at three or four hundree yards diffance: the water is perfectly clear, and the prodigious number and variety of fish in it, while swimming many feet deep appear as plainly as though lying on the table before your eyes the water has a difagreeable tafte, and imells like bilge water This river enters into the Atlantic, north of St. Augustine .-Indian river rifes a short distance from the sea coast, and run from north to fouth, forming a kind of inland pallage for manmiles along the coaft. - Seguana, Apalachicola, Chatahatchi, El cambia, Mobile, Pateagoula, and Pearl rivers, all rife in Georgia and run foutherly into the gulph of Mexico.

There are, in this territory, a great variety of foils. The eaftern part of it, near and about St. Augustine, is far the modunifruitful; yet even here two crops of Indian corn are produced. The banks of the rivers which water the Floridas, and the parts contiguous, are of a superior quality, and well adapted to

which is high and plealant, abounds with wood of almost every kind; particularly white and red cak, live oak, laurel magnolia, pine, history, cypress, red and white cedar. The live oaks, though not tall, contain a prodigious quantity of timber: the small is generally from twelve to twenty feet in circumference, and rifes ten or twelve feet from the earth, and then branches into four or five great limbs, which grow in nearly a horizontal direction, forming a gentle curve. "I have stepped," says Barton, "above fifty paces, on a straight line, from the trunk of one of these trees to the extremity of the limbs." They are over green, and the wood almost incorruptible. They bear a great quantity of small acorns, which are agreeable food, when roated, and from which the Indians extract a tweet oil, which they ute in cooking homminy and rice,

The laurel magnolia is the most beautiful among the trees of the forest, and is usually one hundred feet high, though tome memuch higher. The trunk is perfectly creek, rifing in the firm of a beautiful column, and supporting a head like an obtuse me. The flowers are on the extremities of the branches; are large, white, and expanded like a role, and are the largest and complete of any yet known; when fully expanded, they are from fix to nine inches diameter, and have a most delicious figure. The cyprels is the largest of the American trees. "I have feen trunks of these trees," lays Bartram, "that would masure eight, ten, and twelve seet in diameter, for forty and fify feet flraight shaft." The trunks make excellent shingles, boards, and other timber; and when hollowed, make durable and convenient canoes, "When the planters fell these mighty trees, they raise a stage around them, as high as to reach above the buttreffes; on this stage eight or ten negroes alcend with their ares, and fall to work round its trunk."

The intervals between the hilly part of this country are extreatly rich, and produce spontaneously the fruits and vegetables that are common to Georgia and the Carolinas. But this country is rendered valuable in a peculiar manner by its extenfive ranges for cattle.

St. Augustine, the capital of East-Florida, is situated on the sea coast, latitude 29° 45'; is of an oblong figure, and intersected by sour streets, which cut each other at right angles. The to settled with bustions, and inclosed with a ditch: it is I will desended by a castle, called fort St. John,

^{*} Travels, page 85.

appointed as to ordnance. The north and fouth break the entrance of the harbour, form two channels, who have eight feet water.

The principal town in West-Florida is Pensacola, 300 22%. It lies along the beach, and like St. Augus of an obling form. The water approaches to the town for small vessels, are obstructed by a low and fandy The bay, however, on which the town stands, forms commodious harbour, and veilels may ride there fecu every wind. The exports from this town, confifting o logwood, er dollars, amounted, while possession c n average, to fixty-three th

LOUISIANA

and heart has not and basedulide out Al-Rev Rentl'yet

appeinted at 10 ordered. The north with the feeter of

LOUISIANA is bounded by the Missisppi, on the east; by the gulf of Mexico, on the south; by New-Mexico, on the west; and runs indefinitely north. Under the French government Louisiana included both sides of the Missisppi, from its mouth to the Illinois, and back from the river, east and west indefinitely.

The Mississippi, on which the fine country of Louisiana is fituated, was first discovered by Ferdinand de Soto, in 1541. Monsieur de la Salle was the first who traversed it, He, in the year 1682, having passed down to the mouth of the Mississippi, and surveyed the adjacent country returned to Canada, from

whence he took passage to France.

From the flattering accounts which he gave of the country, and from the consequential advantages that would accrue from fettling a colony in those parts, Louis XIV, was induced to establish a company for the purpose. Accordingly a squadron of four veffels, amply provided with men and provisions, under the command of Monsieur de la Salle, embarked with an intention of fettling near the mouth of the Mississippi; but he unintentionally failed a hundred leagues to the westward of it, where he attempted to establish a colony; but through the unfavourableness of the climate, most of his men miterably perished, and he himself was villainously murdered, not long after, by two of his own men. Monfieur Ibberville succeeded him in his laudable attempts. He, after two fuccelsful voyages, died while preparing for a third. Crozat succeeded him: and in 1712, the king gave him Louisiana. This grant continued but a fhort time after the death of Louis XIV. In 1763, Louisiana was ceded to the king of Spain, to whom it now

This country is interfected by a number of fine rivers, among which are the St. Francis, which empties into the Mississippi at Kappas Old Fort, navigable about two hundred and fifty or three hundred miles; its course is nearly parallel with the Mississippi, and from twenty to thirty miles distant from it;

the Natchitoches, which empties into the Mississippi above Point Coupee; the Adayes or Mexicano river, emptying into the gulph of Mexico; and the river Rouge, on which, it is well known, are as sich filver mines as any in Mexico. This is supposed to be one principal reason why the exclusive navigation of the Millillippi has been to much infilled on by Spain.

Louisians is agreeably situated between the extremes of heat and cold; its climate varies as it extends towards the non-

breezes from the fe latitudes in Africa thoic of Europe u ferene sir. To judg inil of Louisians, w Fellx, Perna, India ing latitudes. Of ment; and yet it must

The fouthern parts, lying within the reach of the refreilling d like those under the fane ern regions are colder than arallels, with a wholefore ice to be expected from the our eyes to Egypt, Amba, on, all lying in correspondne has a tolerable governedged, they all are, or have

been famous for their riches and fertility. From the favourableness of the climate, two annual crops of Indian corn may be produced; and the toil, with little cultivation, would furnish grain of every kind in the greatest abundance. The timber is as fine as any in the world, and the quantities of live only afe, mulberry, walnut, cherry, cypiels, and cedar, are after nithing. The neighbourhood of the Millimpi, bendes, furwithes the richest fruits in great variety; the foil is particularly adapted to hemp, flax, and tobicco; and indigo is at this time a stople commodity, which commonly yields the planter threa. or four cuttings a year. In a word, whatever is rich and rarein the most definable climates in Europe, seems to be the spontaneous production of this delightful country. The Miffifippi and the neighbouring lokes furnifi, in great plenty feveral forts of fish, particularly perch, pike, flurgeon, and cels,

In the northern part of Loudiana, forty-five miles below the mouth of the Ohio river, on the well bank of the Muliflippi, a tettlement is commenced, conducted by Colonel Morgan, of New-Jerfey, under the patronige of the Spanish king. The ipot on which the city is proposed to be past, is called New-Madrid, after the capital of Spain, and is in north latitude 300 301

The limits of the new city of Mideld are to extend four miles fouth, and two miles west from the river, so as to cross a be "" living, deep lake, of the pureft firing water, one bindred varids wide, and feveral miles in length, emptying aidf, by a conflant rapid narrow fiream, through the center of the city. The banks of this lake, which is called St. Annia, are high, beautiful, and pleafant; the waters deep, close, and Iwest; the bottom a clear find, free from woods, inrale, or other vegetables, and well stored with fish. On each fide of this delightful lake ftreets are laid out, one hundred feet wide, and a road is to be continued round it of the here breadth; and the trees are directed to be preferved for ever, for the health and pleasure of the citizens. A fireet one hundred and twenty feet wide, on the banks of the Miffiffippi, is hid mat, and the trees are directed to be preferred for the hose purpole. Twelve acres, in a central part of the city, are in be referved in like minner, to be ornamented, regulated and improved by the magistracy of the city for public walks; forty half acre lots for other public uses; and one lot of melve seres for the king's ufe.

New-Madrid, from its local fituation and adventitious privileges, is in a prospect of being the great emporium of the western country, unless the free navigation of the Missisppi should be opened to the United States; and even should this desired event take place, which probably will not without a repture with Spain, this must be a place of trade. For here will naturally center the immense quantities of produce that will be borne down the Illinois, the Mississppi, the Ohio, and their various branches; and if the carriers can find as good a market for their cargoes here, as at New-Orleans or the West-Indies, and can procure the articles they defire, they will glodly five themselves the difficulties and dangers of navigating the long Mississippi.

 vegetables. Iron and lead mines, and falt springs, it is afferted, are found in such plenty as to afford an abundant supply of these necessary articles. The banks of the Mississippi, for many leagues in extent, commencing about twenty miles above the mouth of Ohio, are a continued chain of lime-stone. A fine tract of high, rich, level land, S. W. by W. and N. W. of New-Madrid, about twenty-sive miles wide, extends quite to the river St. Francis.

It has been supposed by some, that all settlers who go beyond the Mississippi, will be for ever lost to the United States. There is, we believe, little danger of this, provided they are not provoked to withdraw their friendship. The emigrants will be more up of the citizens of the United States. They will carry along with them their manners and customs, their habits of government, religion and education; and as they are to be industed with religious freedom, and with the privilege of making their own laws, and of conducting education upon their own plans, these American habits will undoubtedly be cherished; if so, they will be Americans in fact, while they are nominally the subjects of Spain.

It is true, Spain will draw a revenue from them, but in return they will enjoy peculiar commercial advantages, the benefit of which will be experienced by the United States, and perhaps be an ample compensation for the loss of so many citizens as may migrate thither. In short, this settlement, if conducted with judgment and prudence, might be mutually serviceable both to Spain and the United States; it might prevent jealousies; letter national prejudices; promote religious toleration; preserve larmony, and be a medium of trade reciprocally advantageous.

But it is well known that empire has been travelling from each to well. Probably her last and broadest feat will be America. There the sciences and arts of civilized life are to receive their highest improvements: there civil and religious liberty are to similar, unchecked by the cruel hand of civil or ecclesistical sample. There genius, aided by all the improvements of former to be exerted in humanizing mankind, in expanding and him; their minds with religious and philosophical knowns planning and executing a form of government, involve all the excellencies of former governments, of their defects as is consistent with the imperfection affairs, and which will be calculated to protect the oner consistent with the natural rights of manifest one what ever existed. Elevated with these

y known, and the knowledge of them is rate increaning him Europe and America, the power of European potentiates to confined to Europe, and their prefent American dominas become, like the United States; free, fovereign, and indendent empires:

trees to depend on a timely adoption of a wife and liberal con the part of Spain, whether or not there shall be a spectrovolution in her American colonies. It is afferted by the informed on the subject, that there are not a hundred Spatimilies in all Louisiana and West Florida; the bulk of abitants are French people, who are initiated to the Spanis and emigrants from the United States, and a few English, at, Dutch, and Irish. This was the case in 1791; and as emigrations to this country have since been, and will probation future be; from the United States, and these emigrations in the best of the will soon come; when the Anglo America in this country will far exceed the number of all other

The weetened policy of New-Orleans, unlefs changed, will have been in the Spanish colonies. So long as the golden can dictate laws and dispense with them at his pleasure, there monopolies in trade for his own and his favourites' things, as is now the case, there can be no stability in the latter of this place. The exclusive right, even of supply-

under the French government, were in abundance for half a dollar. The monopoly of flour is, if possible, on still a worse footing for the inhabitant; and the tobacco inspection yet more discouraging to the planter. The governor, or the crown, as it is collect, must have an undefined advantage in every thing. Hence all are ripe for a revolution the moment one shall offer with prospect of being supported, whether it shall come from the United States, England, France, or internally from the inhabitants.

It is taid to have been the fixed resolution of the British ministry to seize on New Orleans, in the first instance, in case a rupture with Spain had taken place, as a necessary prelude to an attack on the Spanish possessions in the West-Indies and on the main. For this purpose every bend of the river, every bay and harbour on the coast, have been surveyed and sounded with the utinost exactness, and all of them are better Luown to the British than to the Spaniards themselves.

Whilst the United States were engaged in the revolution war against England, the Spaniards attacked and possessed themfelves of all the English posts and settlements on the Mississippi, from the Iberville up to the Yazoos river, including the Natch z country; and by virtue of this conquest are now propling and governing an extent of country three degrees north of the United States' fouth boundary, and claiming authority which no treatics warrant. This alone will probably be deemed fufficient caule for the United States to join with any other power against Spain, the first opportunity, as they conceive these territories belong to them by treaty. In fuch cafe, the Kentucky country alone could, in one week, raile a fufficient force to conquer all the Spanish possessions on the Mishasippi; whilst one thouland men would be equal to defend the whole country of New O leans and Louisiana from any enemy approaching it by fea. The greater a hostile fleet entering the Miffishippi, the greater and more certain would be their destruction, if opposed by men of knowledge and refolution.*

[&]quot;The following extract of a letter from a genterman at New-Oriente, detect September, 1793, contains much ufeful information, in confirmation of the above:

to write to you by every opportunity, and to communicate to you every inormation which I could derive from my excursion to the Ohio, down that

New-Orleans flunds on the east fide of the Mississippi, one hundred and five miles from its mouth, in latitude 30° 2' much. In the beginning of the year 1787 it contained about

braziful licram, during my flay at Kentucky and the western posts, my visit to the Illinois and the different settlements on the Millissippi, from thence down to New Origans.

the I have devoted more than twelve months in making this tour, with the decrement to judge for my felf, and to give you and my other friends interesting to be depended upon, regarding the climate, foil, natural productions, papulation, and other advantages and difadvantages, which you may depend on finding in the country I have paifed through, I cannot, within the narrow bounds of this letter, comply with my intention, and your wifh, but I mail they of you were't fatisfied with what follows:

plite to Louisville is a flockade fort, garrifoned by two compaa of the fast United States regiment. What use this post is of, I never could on -It a a mere hospital in the summer season, and the grave of brave men, the might be utefully employed elfewhere. Fort Harmar is as remarkably athful; fo is the New-England fettlement at Muskingom; and I think the Momi sendement will be healthful when the people have the comforts of good living about them; at prefent they are the poorest among the poor emigrants to this country, and not the best managers. Below the falls on the west side, is a missable fettlement, called Clarkefville, frequently flooded, and composed of a people who cannot better themselves at present, or I suppose they would not me here. From thence I made an excursion by land to Post Vincent, diftast about one hundred miles : the fort here is garrifoned by two companies, at pear expense, but little use. Not liking the country on account of the many balle neighbouring Indians, I haftened out of it, and went with a party of Frenchon to Kafkaikias, in the Illinois country, and visited Prairie des Rochers, St. Phillip's, Belle Fontaine, and Kahokia; from whence making up a party to parise some hostile Kukapoos, and steering due east, we fell on the head waters the Kafkarkia river, which we croffed at some distance. This is a delightful Tary! On our return to Kahokia, I croffed over to St. Louis, on the Spanish but I did not proceed far into the country; what I did fee I did not like, and therefore bought a canoe and went down the Mississippi to St. Genevices and the Saline. Not being pleafed with these places, nor the country around, I enbraced the company of fome French hunters and traders going to ands the E Francis river, in a fouth-west direction from St. Genevieve. After travelling there miles nearly, I came to a fweet country; here meeting with some Shawwie Indians going to l'Ance la Graife, and New-Madrid. I made them a fatal. perfent, and engaged them to efcort me there, which they did through a country Search beautiful beyond description; variegated by (mast hitls, be entitud to her, and extensive plains of luxuriant foil. Here the Spannerds are building a handlome fort, to encourage the fettlement by Americana, on a plan of Colonel Morgan's, of New-Jerfey, which, had it seen purfued, as proposed by him, would have made this the first in all the western country, but they have detimed from it, fo much as to discourage the settlement, and many have left in De banks of the Miffiffippi overflow above and below all town, but the equibeat from the river is incomparably beautiful and men I said a tout back

GENERAL DESCRIPTION &c.

76

one thousand one hundred houses, seven-eights of which were continued by fire in the space of five hours, on the 19th of March, 1788. It is now rebuilt. Its advantages for trade are very great. Situated on a noble river, in a fertile and healthy cleantry, within a week's fail of Mexico by sea, and as near to the Bruish. French, and Spanish West-India islands, with a metal certainty of its becoming the general receptacle for the produce of that extensive and vehiable country, on the Mediships and Ohlo; these circumstances are sufficient to sufficient its future growth and commercial importance.

The greater part of the white inhabitants are Roman Catholies; they are governed by a vicerby from Spain; the number of inhabitants is unknown.

to the river St. Francis, diffant about twenty-eight or thirty miles, and returned by another rome more fouthward, to my great fatisfaction. Expressing to fome of the people, at New-Midrid, my furprise at Colonel Saus's account of this country, I was told that he never went one hundred yards back from the river, either on the Onio or Milli lippi, except once, and that was at l'Ance la Graife, where a horfe was provided for him, and he rode fifteen or twenty miles, and a sturned to careptured with the country, that he would not liften to the proposed fettlement of New-Madrid being fixed at any other place; and he actually applied to Colonel Morgan for forty furveys, most of which were executed; and be entered into obligations for fettlements thereon; but the Colonel refufing to grant him three hundred acres of the town lots, for a farm, as it would be injournal to other applicants of equal merit, S*** twore he would do every thing. in his power to injure Morgan and the fettlement; which it feems he has endead your dito do. to the rain, however, of his own reputation. I am fatisfied that the feature of this real-mout is only owing to a narrow policy in the Spanish government, on to a deviation from their first plan, and not from the causes reproduced by its enemies. This is the country, of all others, I have feen, which I would wish to fettle in, had Colonel Mergan's plan been adopted, or million into execution; and thoulands among the bolk people of the western a story would already have been tettled here. Why it was not, I know not; $t\geq 1$, in fold just only of his faccots was the caute.

Where continuing two months in this delightful country, I proceeded to the Northez, which has already become a confiderable fettlement, and is now a the the poternment of Don Gayofo, a man greatly beloved; but the Spanish pover ment, though I think it liberal or pretent, will not long agree with the countries of liberty and justice; and a revolution is now in embryo, which a reall monter will blow to a fieme; and New-Orleans itself will be at the monty of real fets, it issued by a handful of the Kentucky people.

MEXICO, OR NEW-SPAIN.

MEXICO is fituated between 9° and 40° north-latitude, and 18° and 50° west-longitude. Its length is two thousand one bundred miles, and breadth one thousand fix hundred. It is bounded on the north, by unknown regions; on the earl, by Louisiana and the gulph of Mexico; on the south by the issume of Darien, which separates it from Terra Firma in South-America; and on the west, by the Pacific Ocean.

This walk country is divided into three grand divisions, viz. Our Maxico, 2. New-Mexico Proper, 3. Cali-

torein, lying on the west, and a peninfula.

OLD-MEXICO.

The ancient kingdom of Mexico, properly fo called, was divided into several provinces, of which the vale of Mexico was the finest in every respect. This vale is surrounded by verdant mountains, measuring upwards of one hundred and twenty miles in circumference at their base. A great part of it is occupied by two lakes, the upper one of fresh water, but the lower one brackish, communicating with the former by acres of a canal. All the water running from the mountains s collected in this lower lake, on account of its being in the bettom of the valley; hence it was ready, when swelled by tstraordinary rain, to overflow the city of Mexico. selightful region contained the three imperial cities of Mexico, Acolhuscan, and Tlacopan; besides forty others, with innumemble villages and hamlets; but the most considerable of theie, streeting to Clavigero, now scarcely retain one twentieth part of their former magnificence. The principal inland provinces the northward were the Otomies; to the fouth-west the Milaziness and Cuitlateces; to the fouth the Tlahuicas and Churacas; to the fouth-east, after the states of Itzocan, Jauh-= Quanhquecollon, Atlixeo, Tehuacan, and others, were e great provinces of the Mixtecas, the Zapotecas, and the Chapaneess; towards the east were the provinces of Tepayacac, Popolocas, and Totonacas. The maritime provinces on the

Mexican gulf were Contracualco and Cuetlachtlan, called by the Spaniards Cotaffa. On the Pacific Ocean were those of Coliman, Zacatollan, Tototepec, Tecuantepec, and Zoconochec.

The province of the Otomics began in the northern part of the vale of Mexico, extending through the mountains to the north, to the distance of ninety miles from the city of Mexico; the principal cities being Tollan, or Tula, Xilotepec: the latter made the capital of the country by the Spaniards. Beyond the settlements of the Otomics, the country for more than a thousand miles in extent was inhabited only by batbarous and wandering savages.

The Malatzinea province contained the valley of Tolocan, and all the country from Taximaroa to the frontier of the kingdom of Michuacan. The valley of Tolocan is upwards of forty miles long from fouth-east to north-west, and thirty in breadth, where broadest. Its principal city, named also Tolocan is situated at the foot of a high mountain covered with snow, thirty miles distant from Mexico.

The country of the Chillateous extended from north east to fouth-well, upwards of two hundred miles, extending as far as the Pacific Ocean. Their capital was named Mexcaltepec, once a great and populous city, fituated upon the fea couft, but of which the ruins are now fearcely visible. That of the Tlahuicas was named Quaulmahuae, and fituated about forty miles to the fouthward of Mexico. The province extended almost fixty miles fouthward, commencing from the fouthern mountains of the vale of Mexico.

The country of the Cohuixcas extended on the fouthward as far as the Pacific Ocean, through that part where at prefent the port and city of Acapulco lie. It was divided into the flates of Tzompance, Chilapan, Tlapan, and Titlla; the latter a very hor and unwholesome country. To this province belonged a place named Tlicheo, celebrated for its filter mines.

The profinge of the Mixteeas extended from Acatlan, a place differs about one hundred and twenty miles from Mexico, as far as the Pacific Ocean towards the fouth-east. The inhabitants carried on a confiderable commerce, and had several well-inhabited cities and villages. To the east of the Mixteeas were the Zapoteeas, to called from their capital Testsapotlan. In their statistic was the village of Huaxyacue, now Ocaca, or Guaxaca.

The province of Monothin lay to the northward of the Mixners; and to the northward and eaftward of the Zopotecas was Commonthic having their copicals of the faint name with their provinces. The Chiapanecas, Zoqui, and Queleni, were the help of the Mexican provinces towards the fouth-east. On the file of the meuntain Popucatepec, and around it, lay several that, of which the most confiderable were Cholallan and Haexotzinco. These two having, with the affishance of the Thiedans, shaken off the Mexican yoke, re-established their former aristocratical government. The Cholulans possessed a small hamlet called Cuitlaxcoapan, in the place where the Spaniards afterwards founded the city of Angelopoli, which is the second in New-Spain.

To the eastward of Cholula lay a considerable state named Teperate; and beyond that the Popolocas, whose principal cities were Tecamachaleo and Quecholac. To the southward of the Popolocas was the state of Tahuacan, bordering upon the country of the Mixtecas; to the east, the maritime province of Cuetlachtlan; and to the north, the Totonacas. The extent of this province was one hundred and fifty miles, beginning from the frontier of Zacatlan, a state distant about eighty miles from the court, and terminating in the gulf of Mexico. Behdes the capital, named Mizquihuacan, this country had the beautiful city of Chempoallan, situated on the coast of the galf, remarkable for being that by which the Spaniards entered the Mexican empire.

Coliman was the most northerly of the province on the Preisc Ocean; the capital, named also Coliman, being in latitude 19, longitude 27° 2'. Towards the south-east was the province of Zacotlan, with its capital of the same name; then time the coast of the Cuitlateeas; after it that of the Cohuxinas, in which was the celebrated port of Acapulco. The Jopi Innered on the Cohuixca coast; and adjoining to that the Mintees country, now called Xicayan; next to that was the large province of Tecuantepee; and lastly, that of Xochoncheo.

This province, the most southerly of the Mexican empire, as bounded on the east and south-east by the country of Achitepec, which did not belong to Mexico; on the west by Irrustepec; and on the south by the ocean. The capital, colled also Xoconocheo, was situated between two rivers, in 14 carees of latitude, and 28° 3' of longitude. On the Mexican pill there were, besides the country of Totonecas, the provinces of Caethachtlan and Coatzacualco; the latter bounded on the east by the States of Tabasco, and the peninsula of Yucatan. The praintee of Cuetlachtlan comprehended all the coast between

tiver Alvarado and Antigua, where the province of the Trannecas began.

The climate of this vast country varies much according to the fituation of its defferent parts. The maratime places are het unhealthy, and moift; the heat being fo great as to cause pople to fweat even in the month of January. This heat is supposed to be owing to the slatness of the coasts, and the accumulation of fand upon them. The moisture arises from the vast evawall as from the great torrants of was poration from the is. The lands which lie in ter descending fi ins, the tops of which are althe neighbourhoor necessity be cold; and Cheiways covered with gero informs us, t n a mountain not more than twenty-five miles city of Mexico, where there e dog day. " All the other was white frost t author, " where the greatest inland countries. ite fo mild and benign, that population prevailes, ite fo mild and benign, that they neither feel the rigour of winter nor the heat of fummer. It is true, in many of the countries, there is frequently white frost in the three months of December, January, and February, and fometimes even it snows; but the small inconvenience which such cold occasions, continues only till the rifing funt no other fire than his rays is necessary to give warmth in winter; no other relief is wanted in the season of heat but the shade: the same clothing which covers men in the dog-days, defends them in January, and the animals fleep all the year under the open fky.

" This mildness and agreeableness of climate under the torrid zone is the effect of several natural causes entirely unknown to the ancients, who did not believe it to be inhabited, and not well understood by some moderns, by whom it is believed unfie vourable to those who live in it. The purity of the atmosphere, the smaller obliquity of the solar rays, and the longer stay of this luminary above the horizon in winter, in comparison of wher regions farther removed from the equator, concur to leffett the rold, and to prevent all that horror which disfigures the three of nature in other climes. During that season a serene sky and the natural delights of the country are enjoyed; whereas unier the frigid, and eve for the most part under the temper we romes, the clouds rob man of the prospect of heaven, and the new buries the beam autiful productions of the earth. No to tem saper the heat of fummer. The plentis PA THEF frequently water the earth after mid-day, part chan serror, otorms or natt are netties more servere than in Europe."

The state of which Clavigero enumerates five. One named by the Spaniards Volcon d'Orizaba, is higher than the peak of Teneriffe, according to the account of the Jesuit Tallandier, who measured shem both. It began to send forth smoke in the pear 1545, and continued burning for twenty years, but has not severed any symptoms of eruption since that time. It is of spaical sigure, and by reason of its great height, may be seen they leagues distance. The top is always covered with snow, it the lower part with woods, of pine and other valuable times. It is about ninety miles to the castward of the capital.

Two other mountains, named Popocatepec and Iztaccihuatl, which lie near each other, at the distance of thirty-three miles to the fouth-east of Mexico, are likewise surprisingly high. Clarigero supposes the former to be higher than the highest of the last, considering the elevated ground on which the base of it lands. It has a crater more than half a mile wide; from which, in the time of the Mexican kings, great quantities of smoke and sees issued. In the last century it frequently threw out great there of as upon the adjacent places; but in this century yany smooth has been observed. This mountain is named the Spaniards Wolcan, and the other Sierra Nevada; the

it amounted to twenty thouland, and is now in all probabilit a great deal more. Belides thele there are the two mountain of Coliman and Tochtlan, both of which have occasionally emitted flames. Clavigero does not include in the lift of Mexican volcanoes, either those of Nicaragua or Gustimus because these countries were not subject to the Mexican fore reigns. Those of Gustimals sometimes break forth in a mil furious manner, and in the year 1773 entirely destroyed the beautiful city. The Nicaraguan volcano, cilled Juruyo wa only a small hill be -760. In that year, however gan to burn with furious ex on the 29th of & work, and the neighbouring plofions, ruining e village of Guacai that time continued to emi quantities, that the erupted fire and burning m themselves into three high matters in fix year circumference. During the mountains, nearly ies were carried as far as the time of the first and fifty miles distant from city of Queretaro, one the volcano; and at Valladono, distant fixty miles from it, the shower was so abundant, that the people were obliged to sweep the house yards two or three times a day.

Besides these volcanoes, there are others in Mexico of a very remarkable height. The great chain of mountains called the Andes, are continued through the inthmus of Panama, and through all Mexico, until they are lost in the unknown mountains of the north. The most considerable of that chain is known in Mexico by the name of Sierra Madic, particularly in Cinalo and Tarahumara, provinces no less than one thousand two hundred miles distant from the capital.

Mexico is well watered by very confiderable rivers, though none of them are comparable to those of South-America. Some of these run into the gulf of Mexico, and others into the Pacisic Ocean. The Alvarado has its principal source among the mountains of the Zapotecas, and discharges itself by three navigable mouths in the Mexican gulf, at the distance of thirty miles from Vera Ciuz. The Coatzocualco rises among the mountains of the Mixtecas, and empties itself into the gulf near the country of Onohualco. The river Chiapan, which likewise runs into this gulf, rises among the mountains which separate the district of Chiapan from that of Guatimala. The Spaniards call this river Tabasco, by which name they also called that tract of land which unites Yucatan to the Mexican

Mexican empire. The most remarkable were those of Mexico, upon which the capital of the empire d. Of these, the fresh water one called the lake of silco, extending in length from east to west twelve miles, far as the city of Xochimilco; from thence, taking a northerdirection; it incorporated itself by means of a canal with hake of Tezcuco; but its breadth did not exceed fix miles. e other, named the lake of Tezcuco, extended fifteen or rather enteen miles from east to west, and something more from the to north; but its extent is now much less by reason of Spaniards having diverted the course of many of the streams ich run into it. This lake is salt, which Clavigero supposes wife from the nature of the foil which forms its bed. sendes there, there are a number of smaller lakes, some of ich are very delightful. There is a vast variety of mineral ters, of the nitrous fulphurcous, and aluminous kinds, some them so hot, that meat might be boiled in them. At Tetucan is a kind of petrifying water, as well as in several other as of the empire. One of them forms a kind of smooth prestones, not displeasing to the taste; the scrapings of which ten in broth are celebrated as a diaphoretic, probably withsay good reason. The dole for a person not difficult to be med is one dram of the scrapings. Many of the rivers of so afford furprifing and beautiful cascades, particularly - test river Guadalaxara, at a place called Tempizque, fifteen

in grains, and the people in whose country it was found, we obliged to pay a certain quantity by way of tribute to emperor. They dug silver out of the mines in Tlocheg, a some other countries; but it was less prized by them the by other nations. Since the conquest, however, so many silve mines have been discovered in that country, especially may provinces to the north-west of the capital, that it is in vain attempt any enumeration of them. They had two forts copper; one hard, which served them instead of iron, to make and other instruments for war and agriculture; the oth kind, which was

In Chilapan were mines ickfilver; and in many plathey had fulphur, alum, vitriol, cinnabar, ochre, and an eagreatly refembling white lead. These minerals were employed in painting and dyeing, but we known not to what they put their quickfilver. There was great abundance amber and asphaltum upon their coasts, both of which wo paid in tribute to the king of Mexico from many parts the empire: the former was wont to be set in gold by vof ornament, and asphaltum was employed in their saffices.

Mexico produces some diamonds, though but few in m ber; but they had in greater plenty some other precious flor fuch as amothyfls, cats eyes, turquoifes, cornelians, and fo green stones resembling emerales, and very little inferior them, of all which a tribute was paid to the emperor by people in whose territories they were found. They w likewife furnished with chrystal in plenty from the mount which lay on the coast of the Mexican gulph, between port of Vera Cruz and the river Costrocualco. In the mo tains of Celpolalpan, to the castward of Mexico, were quar of jaiper and marble of different colours; they had likes alabafter at a place called Tecalco, now Tocale, in the ne bourhood of the province of Tapeyacac, and many other p of the empire. The flone tetzontli is generally of a dark colour, pretty hard, perous, and light, and unites most fir with lime and faild, on which account it is of great request buildings in the capital, where the foundation is bad. me entire mountains of load-stone, a very considerable one of which lies between Teoitztlan and Chilapan, in the country of the Cohuixcas. They formed curious figures of nephritic tone, some of which are still preserved in European museums. They had a kind of fine white tale, which burnt into an excellest plaffer, and with which they used, to whiten their paintings. But the most useful stone they had, was that called itali, of which there is great abundance in many parts of Mexio: it has a gloffy appearance, is generally of a black colour, and femi-transparent; though sometimes also of a blue or white colour. In South-America this stone is called pietra del galinazzo; and Count Caylus endeavours to show, in a manuscript differtation quoted by Bomarc, that the obsidiona, of which the ancients made their vales murini, were entirely fimilar to this stone. The Mexicans made of it looking-glasses, knives, lancets, razors, and spears. Sacred vales were made of it after the introduction of Christianity.

The foil of Mexico, though various, produced every where the necessaries, and even the luxuries of life. "The celebrated Dr. Hernandez, the Pliny of New-Spain," says Clavigero, has described in his Natural History about one thousand two hundred plants, natives of the country; but his description, though large being confined to medicinal plants, has only comprised one part of what provident nature has produced there for the benefit of mortals. With regard to the other classes of vegetables, some are esteemed for their slowers, some for their fruit, some for their leaves, some for their root, some for their trunk or their wood, and others for their gum, resin, oil, or juice."

Mexico abounds with a great variety of flowers, many of which are peculiar to the country, while multitudes of others imported from Europe and Asia rival in luxuriance the natives of the country itself. The fruits are partly natives of the Canary islands, partly of Spain, besides those which prownaturally in the country. The exotics are water melons, typles, pears, peaches, quinces, apricots, pomegranates, sign, back cherries, walnuts, almonds, olives, chesnuts, and grapes; attempts these last are likewise natives. There are two kinds of wild vine found in the country of the Mixtecas, the one resembling the common vine in the shoots and sigure of its leaves; it produces large red grapes covered with an hard skin, but of sweet and grateful talte, which would undoubtedly improve greatly by culture. The grape of the other kind is

GENERAL DESCRIPTION OF

hard, large, and of a very barsh taste, but they make an excelled conferve of it. Clavigero is of opinion that the cocos tre plantain, citron, orange, and lemon, came from the Philippia islands and Canaries; but it is certain that these, as well as other trees, thrive in this country as well as in their native foil. A the maritime countries abound with cocoa nut trees: they have teven kinds of oranges, and four of lemons, and there are like wife four kinds of plantains; the largest, called the zapala, i from fifteen to twenty inches long, and about three in diameter it is hard, little efteemed, and only eat when roafted or boiled The platano largo tain," is about eight inche long, and one and a er; the fkin is at first great G12. and blackish when p ipe. The guinco is a smaller fruit but richer, fofter, ar us, though not fo wholesome A species of plantal ominico, is imaller and mot delicate than the o re whole woods of plaintait tices, oranges, and e people of Michuacan carry on a confiderable commerce e dried plantains, which are preferable either to railins or ngs. Clavigero enumerates twenty eight different forts of fruit, natives of Mexico, befides many others, the names of which are not mentioned. Hernandes mentions four kinds of cocoa nuts, of which the smallest of the whole was in the moil use for chocolate and other drinks daily made afe of; the other kinds ferved rather for money in commerce than for aliment. The cocoa was one of the plants most cultivated in the warm countries of the empire, and many provinces paid it in tribute to the emperor, particularly that of Xoconocheo, the cocoa-nut of which is preferable to the others, Cotton was one of the most valuable productions of the country, as it lerved inflead of flax, though this left also was produced in the country: it is of two kinds, write and tawny-coloured. They made use of rocoo, or Brafil-wood in their dying, as the Europeans also do: they made cordage of the bark, and the wood was made use of to produce fire by friction.

The principal grain of Mexico, before the introduction of those from Europe, was maize, in the Mexican Inguage called thould, of which there were several kinds, dailying in size, weight, colour, and taste. This kind of grain was brought from America to Spain, and from Spain to other countries of Europe. The French bean was the principal kind of poste in ase among 1, of which there were more up case than of the maize; the was called ayacottly of the fize of a common bean, with a 1 cel flower; but the most calcented was the shall, black,

MEXICO, OR NEWSPAIN.

y French bean. This kind of pulse, which is not good in with Mexico fo excellent, that it not only serves for suffice to the poorer class of people, but is esteemed a luxury by the Spanish nobility.

fike esculent roots of Mexico, the following were the mest stable: 1. The xicama, colled by the Mexicans catzotl. of the figure and fize of an onion, folid, fresh, juicy, and of ite colour; it was always cat raw. 2. The camote, is anovery common in the country, of which there are three , white, yellow, and purple: they cat best when boiled. 3. excemite, is the root of a plant which has a beautiful flower d the tyger flower, with three red pointed petals, the midpart mixed with white and yellow, formewhat refembling spots of the creature whence it takes its name. 4. The smote, is the root of a kind of Cassava plant, and is likewise d. 5. The papa, a root transplanted into Europe, and ly valued in Ireland, was brought from South-America in:o co. Besides all which they have a number of kitchen ables imported from the Canaries, Spain, and other counof Europe. The American alor is very fimilar to the real and is a plant of which the Mexicans formerly, and the iards still, make great ulc.

ey have a variety of palm trees. From the fibres of the sof one species they make thread; the bask of another to the depth of three singers, is a mass of membranes, itch the poor people make mass; the leaves of another are used for ornaments in their sessions; they are round white, and shining, having the appearance of shells heapon one another. A fourth kind bears nuts called coor muts of oil. Their nuts are of the size of a nuthaving in the inside a white, oily, eatable kernel, covered him purple pellicle. The oil has a sweet scent, but is easily used, when it becomes a soft mass, as white as snow.

timber trees there are great variety, of a quality not infesany in the world; and as there are a variety of climates country, every one produces a kind of wood peculiar to There are whole woods of codars and ebonies, vast ties of agallochum, or wood of aloes; besides others valuaaccount of their weight, durability and hardness, or for seing easily cut, pliable, of a fine colour, or an agreeable r. There are also in Mexico innumerable trees remarkor their size. Acosta mentions a codar, the trunk of was sixteen sathoms in circumference; and Clavigero was one of the length of one hundred and seven Pavis

trees yet known."

feet. In the city of Mexico he mentions very large tables cedar made out of fingle planks. In the valley of Atlixo a very ancient fir tree, hollowed by lightning, the cavity which could conveniently hold fourteen horfemen; nay, are informed by the archbishop of Toledo, that in 1770 went to view it along with the archbishop of Guatimals, which time he caused an hundred young lads to enter its cavi Our author mentions some other trees, of the species call ceiba, which for magnitude may be compared with this cele brated fir: " The largeness of these trees," says he, " is pr ition, and they afford a m portioned to their delightful prospec they are adorned with no leaves and loaded n which there is inclosed particular species , and most delicate cotton this might be, and been, made into webs as fafe delicate, and perh n filk; but it is toillome ! fpin, on account els of the threads, and the profit does not require in , the web not being lafting Some use it for pillows and n.......fles, which have the fingular property of expanding enormously when exposed to the heat of the fun. De Bomare fays, that the Africans make of the thread of the ceiba that vegetable taffety which is so scarce, and to much effeemed in Europe. The fearcity of such cloth is not to be wondered at, confidering the difficulty of making it, The ceiba, according to this author, is higher than all other

Clavigoro mentions a Mexican tree, the wood of which it very valuable, but poisonous, and if incautiously handled wher fresh cut, produces a swelling in the scrotum. He has forgothe name given to it by the Mexicans, nor has largever seer the tree itself, nor been witness to the essect.

This country abounds also with aromatic and medicina atrees, producing gums, refins, &c. From one of these a balsam is produced, not in the least inferior to the celebrated balsam of Mecca; it is of a reddish black or yellowish white, of sharp, bitter taste and of a strong but most grateful odour; it is common in the provinces of Panuco and Chiapan, and other warn countries: the kings of Mexico caused it to be transplanted into their celebrated garden of Huaxtepec, where it shourished and was afterwards multiplied in all the neighbouring moun tasts. The Indians, in order to procure a givine quantity of tam, but n the branches, which allowed more than merc

and maripends, an oil was extracted equivalent which it former is a tree of a moderate height, the which its aromatic, and so hard, that it will keep a for several years, though buried under the earth; the res are small and yellow, the flowers likewise small and are, and the fruit similar to that of the laurel. The oil sdiffilled from the bark of the tree, after breaking it, and thing it three days in spring water, and then drying it in flux; the leaves likewise afforded an agreeable oil by distant. The maripenda is a shrub with lanceolated leaves, thuit of a red colour when ripe, and resembling the grape. Leal is extracted by boiling the branches with a mixture of the fruit.

the trees producing liquid amber, the liquid storax of the saicans, is of a large size, the leaves similar to those of imple, indented, white in one part and dark in the other, the of in threes; the fruit is thorny and round, but brows, with the surface and the angles yellow; the bark tree partly green and partly tawny. By incisions in trusk they extract that valuable substance named liquid and the oil of the same name, which is still more a Liquid amber is likewise obtained from a decoction of the branches, but it is inserior to that obtained from

wik.

in the mountains, having a fruit like an acorn, and containing the nut inveloped in a mucilage, within which there is a finall kernal useful in medicine.

The micquitl, or mezquite, is a species of true acacia, and the gum distilling from it is said to be the true gum arabic; it is a thorny shrub, with branches irregularly disposed, the leaves small, thin, and pinnated; the slowers being like those of the birch tree: the fruits are sweet and catable, containing a feed, of which the barbarous Chichemecas were wont to make a kind of paste that served them for bread. The wood is exceedingly hard and heavy, and the trees are as common in Mexico as oaks are in Europe, particularly on hills in the temperate countries.

Of the elastic gum, which is found in plenty in Mexico, the natives were in use to make foot-balls, which, though heavy, have a better spring than those filled with air. At present they varnish with it their hats, cloaks, boots and great coats, in a manner similar to what is done in Europe with wax, and by which means they are rendered all water proof.

Clavigero laments, that the natural history of vegetables in Mexico is very little known, and that of animals no better. The first Spaniards, says he, who gave them names, were more skilful in the art of war than in the study of nature. Instead of retaining the terms which would have been most proper, they denominated many animals tygers, wolves, bears, dogs, fquirrels, &c. although they were very different in kind, merely from some retemblance in the colour of their fkin, their figure. or some similarity in habits and disposition. The quadrupeds found in Mexico at the arrival of the Spaniards, were lions, tygers, wild cats, bears, wolves, foxes, the common stags, white stags, bucks, wild goats, badgers, pole-cats, weafels, martins, iquirrels, polatucas, rabbits, hares, otters and rats. All thefe animals are supposed to be common to both continents. The white stag, whether it be the same species of the other or not. is undoubtedly common to both, and was known to the Greeks and Romans. The Mexicans call it "the king of the stags." M. Button imagines the white colour of this creature to be the effect of captivity; but Clavigero tays, that it is found wild, and of the same white colour, on the mountains of New-Spain. In many other points, he also controverts the opinions of this celebrated naturalist, who will not allow the lion, tyger or rabbit, to be natives of America.

The animals which are common to Mexico, with the other puts of the continent, are, the Mexican hog, the moufete, the epollum, the armadillo, the techichi, a small animal resembling a dig, which being perfectly dumb, gave occasion to a report, that the Mexican dogs could not bark. The slesh of this animal was eat by them, and was esteemed agreeable and nourishing food. After the conquest of Mexico, the Spaniards having neither large cattle nor sheep, provided their markets with this quatured, by which means the species soon came to be extinct, though it had been very numerous. The land-squirrel is very autrous in the kingdom of Michuscan, has great elegance of form, and is extremely graceful in its movement; but it cannot be tamed, and bites most furiously every person who approaches it.

Beddes there, there are fea-lions, raccoons, and that voracious smitted named the tapir. There are likewife great numbers of monkeys of many different kinds, some of which have heads refembling those of dogs; some of them are strong and sierce,

equalling a man in flature when they fland upright.

Among the animals peculiar to Mexico, is one named by Clavigero coyoto, which appears to have been inaccurately described by natural historians, some making it one species and fome another. The tlalcojotl, or tlalcoyoto, is about the fize of a middling dog, and in Clavigero's opinion, is the largest animal that lives under the earth. The tepeizuintli, or a mountwin-dog, though it is but of the fize of a small dog, is so bold that it attacks deer, and fometimes kills them. Another animal, larger than the two foregoing, is called the xoloitzcuintli; fome of these are no less than four feet in length; it has a face like the dog, but tulks like the wolf, with erect cars, the neck gross, and the tail long : it is entirely destitute of hair, except only the mout, where there are some thick crooked bristles: the whole body is covered with a smooth, soft, ashcoloured skin, spotted partly with black and tawny. This species of animals, as well as the two former, are almost totally extinct. A Lyncean academician, named Giovanni Fabri, has endeavoured to prove, that the xoloitzcuintli is the same with the wolf of Mexico; but this is denied by Clavigero.

An animal called ocotochtli, a kind of wild cat, is remarkable more for the fabulous account of it, than for any fingular property with which it is really endowed. According to Dr. Hernandez, when this creature takes any prey, it covers it with leaves, and afterwards mounting on some neighbouring tree, it begins howling to invite other animals to eat its prey, being itself always the last to eat, because the posson of its tengue is to strong, that if it are first the prey would be infested, and other animals which eat of it would die. To these must be added a curious animal of the mole kind, which is called tozan, or tuza; it is about the fize of an European mole, but very different other wise.

The birds are so numerous, and of such various appearances and qualities, that Mexico has been called the country of

but quadrupeds, and even men.

Though Hernandez palles a yet describes above two He allows to the eagles and those of Europe; and the erly esteemed so excellent, an hundred of them were largest, the most beautiful, is called by the Mexicans ly the larger kind of birds,

The aquatic birds are very numerous and of great variety: there are at least twenty species of ducks, a vast number of greate, with several kinds of herons, great number of swans, quals, water-rails, divers, king's sistens, pelicans, &c. The multitude of ducks is sometimes so great, that they cover the fields, and appear at a distance like slocks of sheep. Some of the herons and egrets are perfectly white, some ash-coloured: others have the plumage of the body white, while the neck, with the tops and upper part of the wings, and part of the tail, are enlivened with a bright scarlet, or beautiful blue.

There are a great number of birds valuable on account of their plumage, which was made use of by the Mexicans in their excellent Mosaic works, an art which seems now to be totally lost. Peacocks have been carried from the old continent to Mexico: but not being attended to, have propagated very flowly. The birds remarkable for their song are likewise very numerous; among which that called the centzonial, by Europeans the mocking-bird, is the most remarkable, on account of its counterfeiting naturally the notes of all others it hears.

^{*} For a more particular account of these animals see History of Quadrupeds annexed.

Mexico, like all other American countries, abounds with tiles, many of them of an enormous fize. The crocodiles and not lefs to be dreaded than those of Africa or Asia; and we likewife fome of those monstrous serpents met with East-Indies and in South-America, though happily the es of those terrible creatures feems to be nearly extinct, they are feldom to be found but in fome folitary wood, or er remote place. There are great numbers of lizards, fome al which the people suppose to be poisonous; but others think opinion ill-founded. There are leveral kinds of poisonous ents, of which the rattle-fnake is one. The cenocoatl is her poilonous ferpent, and remarkable for having a lumisous appearance in the dark; by which, as by the rattle in the tal of the former, travellers are warned to avoid it. Among the hamile's inakes is a very beautiful one about a foot in and of the thickness of the little finger; it appears to the great pleasure in the society of ants, infomuch that it will pany these insects upon their expeditions, and return and them to their usual nest; it is called both by the Mexicans and Spaniards the " mother of the ants;" but Clavigero suppoin, that all the attachment which the snake shews to the and hills proceeds from its living on the ants themselves. The ment Mexicans were wont to take delight in keeping an bundels green Inake, which they catched in the fields, and which, when well fed, would grow to the length of five or fix It was generally kept in a tub, which it never left but proceive food from the hand of its mafter; and this it would the other mounted on his shoulder or coiled about his legs.

The squatic animals are innumerable. Clavigero mentions a post of frogs to large that a fingle one will weigh a pound, which are excellent food. Of fish proper for food, he In that he has counted upwards of one hundred species, was taking in the turtle, crab, lobster, or any other crustaprime shimel.

Of flying and other minute infects the number is produ-There are a variety of beetles; some of a green alou make a great noise in flying, on which account children se find of them, There are great numbers of shining beetles, which make a delightful appearance at night, as well as the fies which abound in the country. There are fix of bees and four kinds of wasps; of which last, one wax and honey of a very sweet taste: another is calwandering wasp, from its frequent change of abode;

and in confequence of these changes, it is constantly employe in collecting materials for its habitations. There is also a blace horner with a red tail, the sting of whicheis to large and strong that it will not only penetrate a fugar-cane, but even the trus of a tree. The lake of Mexico abounds with a kind of h the eggs of which are deposited upon the flags and rulhes fuch quantities as to form large mailes; these are collected by the fishermen, and carried to market for sale: they are caten by both Mexicans and Spaniards, and have much the fame tafte # the caviare of fish: the Mexicans eat also the flies themselves ground and made up with falt-petre. There are abundance s gnats in the moist places and lakes, but the capital, though fituated upon a lake, is entirely free from them. There at other flies which make no noise in their flight, but cause a vie lent itching by their bite, and if the part be icratched, an open wound is apt to enfue. The butterflies are in vaft numbers and their wings glow with colours far superior to those Europe; the figures of some of them are given by Hernandel But notwithstanding its beauties and advantages, Mexico subject to the dreadful devastations of locusts, which sometime occasion the most destructive famines.

There are some of the worms of Mexico made use of by the inhabitants as food, others are poisonous. There are greet numbers of feolopendræ and feorpions, some of the forme growing to an immense fize. Hernandez says, that he has sees fome of them two feet long and two inches thick. The feet pions are very numerous, and in the hot parts of the country their poison is so strong as to kill children, and give terrible paid to adults. Their fling is most dangerous during those hours of the day in which the fun is hottest. In the province d Michigacan is a fingular species of ant, larger than the comme one, with a greyith body and black head; on its hinder pat is a little bag full of a fweet fubiliance, of which children at very fond; the Mexicans Juppole this to be a kind of hone collected by the inject; but Clavigero thinks it rather is it eggs. There is a milehievous kind of tick, which in the he countries abounds among the grafs: from thence it eafly go upon the clothes, and from them upon the fain; there it has with such force, from the particular figure of its feet, that can learnedly be got off: at first it seems nothing but a small blac speck, but in a short time enlarges to such a degree, from the blood which it facks, that it equals the fize of a bean, and then affirmes a leaden colour. Oviedo thys, that the best an which becomes white on being roafted.

The curious productions of the animal kind to be met is country, Clavigero mentions a kind of zoophytes, faw in the year 1751, in a house in the country, miles from Angelopoli, towards the south-east: they four inches long, and had sour very stender seet, matennæ; but their body was nothing more than the leaves, of the same shape, size and colour, with he other leaves of the trees upon which these creatures it. Gemelli describes another kind of these zoophytes found in Manilla.

produces also filk-worms; and the manufacture of be earried on to great advantage, were it not prohibeme political reasons. Besides the common silk, there found in the woods, very white, soft and strong. In the trees in several maritime places, particularly in 3: unless by poor people, however, this silk is not than use, partly from inattention to their interests, but "says Clavigero, "to the obstructions which would in the way of any one who should attempt a trade ad. We know from Cortes's letters to Charles V. thighs and arms, their skin being of an is scarcely a nation on earth in which th deformed: and it would be more difficult backed, lame or fquint-eyed man among than among an hundred of any other nati ness of their colour, the smallness of thinnels of their beards, and the coarlen so far compensated by the regularity and their limbs, that they can neither be calle the contrary, but feem to hold a middl extremes: their appearance neither engage among the young women of Mexico there tiful and fair, whose beauty is at the same winning by the natural sweetness of their and by the pleasantness and natural moc behaviour. Their fenses are very acute fight, which they enjoy unimpaired to t constitutions are found and their health tirely free of many disorders which are Spaniards; but of the epidemical diseases try is occasionally subject they are general them these diseases begin, and with them th perceives in a Mexican that stinking be fioned in other people by the corruption indigestion: their constitutions are phleam

if become so common, and drunkenness is unpunished, one-half of the people seem to have lost their senses; and this, together with the poor manuer in which they live, exposed to all the baseful impressions of disease, and destitute of the means of cortesting them, is undoubtedly the principal cause of the havoc which is made among them by epidemical disorders.

Many persons allow the Mexicans to possess a great talent minition, but deny them that of invention; a vulgar error, which is contradicted by the ancient hillory of that people; Their minds are affected by the same variety of passions with the of other nations, but not to an equal degree; the Mexicans feldom exhibit those transports of anger, or frenzies of love, which are fo common in other countries. They are flow in their and shew a wonderful tenacity and steadiness in those warks which require time and long-continued attention. They ar not patient of injury and hardship, and where they suspect hi wil intention, are most grateful for any kindness shewn; but pe Spaniards, who cannot distinguish patience from insensihe bility, nor diffrust from ingratitude, say proverbially, that the in Indians are alike insensible to injuries or benefits. That habitual which they entertain of all who are not of their nation, respects them often to lye and betray; fo that good faith ceraly has not been respected among them so much as it deserves, They are by nature taciturn, serious and austere, and shew more talkajety to punish crimes than to reward virtue.

no. Generolity and perfect difinterestedness are the principal features of their character. Gold, with the Mexicans, has not Last value which it enjoys elfewhere. They feem to give withthe seluctance what has cost them the utmost labour to acquire. The neglect of felfish interests, with the dislike which they bear the their rulers, and confequently their aversion to perform the imposed by them, seem to have been the only grounds of which exaggerated indolence with which the Americans have then charged; and, after all, there is no tet of people in that watry who labour more, or whose labour is more necessary. a respect paid by the young people to the old, and by chilhas their parents, feem to be feelings that are born with Parents are very fond of their children; but the affection ich husbands bear to their wives is certainly less than that hich wives bear to their hulbands; and it is very common she men to love their neighbour's wives better than the

"Course e and cowardice feem alternately so to affect minds, that it is often difficult to determine whether the predominates: they meet dangers with intrespondent they by the steen look of a Spaniard. That stupid indifficult to those will be character of every American, is peculiated to those will be character of every American, is peculiated to a future state."

Thus much with respect to the general character of Mexicans; ves; that " the modern cans are not i r to the ancient; as the G of these days blance to those who live the times of The ancient Mexicans th more fire, ar e to the impressions of hor they were n re nimble, more active, industrious; he same time more superfl and cruel."

The principal inhabitants of Mexico, in modern time Spaniards fent thither by the court, to fill the posts of ge ment. They are obliged, like those in the mother co who aspire to any ecclesiastical, civil or military employn to prove, that there have been neither heretics, Jews, M. medans, nor any person in their family who have been before the inquisition for four generations. Merchants are defirous of going to Mexico, as well as to other pa America, without becoming colonists, are compelled to of the fame forms: they are also obliged to swear that they three hundred palms of merchandife, their own proper the fleet in which they embark, and that they will not their wives with them. On these absurd conditions the come the principal agents of the European commerce wit Indies. Though their charter is only to continue three and a little longer for countries more remote, it is of importance. To them alone belongs the right of fellir commissioners, the major part of the cargo. If thele were observed, the merchants stationed in the new would be confined to dispose of what they have receive their own account.

The predilection which the administration has for Spa born in Europe, has reduced the Spanish Creoles to acqin subordinate stations. The descendants of the companie Cortes, and of those who came after them, being confexcluded from all places of honour or of trust that wer way confiderable, have feen the gradual decay of the power that separted their fathers. The habit of being obliged to bear that unjust contempt with which they have been treated, has at last mule them become really contemptible. They have totally loil, in the vices which originate from indolence, from the heat of the climate, and from a superfluous enjoyment of all things, that numers and that fort of pride which have ever characterifed thur attion. A barbarous luxury, shameful pleasures, and romantic intrigues, have enervated all the vigour of their minds, and Espersition hath completed the ruin of their virtues, Blindly desoted to priefts too ignorant to enlighten them by their infruitiens, too deprayed to edify them by their example, and too mercenary to attend to both these duties of their function, they bive no attachment to any part of their religion but that which meebles the mind, and have neglected what might have contribited to rectify their morals.

The Mestees, who constitute the third order of citizens, are lost in still greater contempt. It is well known that the court of Madrid, in order to replenish a part of that dreadful vaincy which the avarice and cruelty of the conquerors had excisioned, and to regain the considence of those who had established, and to regain the considence of those who had established their fury, encouraged as much as possible the marriage of Spaniards with Indian women: these alliances, which betwee pretty common throughout all America, were particularly frequent in Mexico, where the women had more understanding and were more agreeable than in other places. The Creoles transferred to this mixed progeny the contemptuous slight they received from the Europeans. Their condition, equivocal at first, in process of time was fixed between the whites and the backs.

These blacks are not very numerous in Mexico. As the natives are more intelligent, more robust and more industrious, than those of the other colonies, they have hardly introduced any Africans except such as were required either to indusge the caprice, or perform the domestic service of rich people. These saves, who are much beloved by their masters, on whom they absolutely depend, who purchased them at an extravagant poce, and who make them the ministers of their pleasures, take advantage of the high savour they enjoy to oppress the Mexicans: they assume over these men, who are called free, an assendency which keeps up an implacable hatred between the two nations. The law has studied to encourage this aversion, by taking effectual measures to prevent all connection between

GENERAL DESCRIPTION OF

them. Negroes are prohibited from having any americal correspondence with the Indians; the men on pain of being mutilated; the women, of being severely punished. On all these accounts, the Africans, who in other settlements are enemies to Europeans, are in the Spanish Indies their warm friends.

Authority has no need of this support, at least in Mexica, where population is no longer what it was formerly. The first historians, and those who copied them, have recorded, that the Spaniards found there ten millions of fouls. This is supd account of conquerors, to posed to have bee jumph; and it was adopted, exalt the magnifi h the more readinels, as it without examination. rendered them the We need only trace with attention the progreians who at first defolated their fine countries, in . convinced that they had not exico and the adjacent parts, fucceeded in multiplying n a but by depopulating the center of _e empire: and that the provinces which are remote from the capital, differed in nothing from the other defects of South and North-America. It is making a great concession, to allow that the population of Mexico has only been exaggerated one-half, for it does not now much exceed two millions.

It is generally believed, that the first conquerors massacred the Indians out of wantonnels, and that even the priests incited them to these acts of ferocity. Undoubtedly these inhuman soldiers frequently shed blood without even an apparent motive; and certainly their fanctic missionaries did not oppose these barbarities as they ought to have done. This was not, however, the real cause, the principal source of the depopulation of Mexico; it was the work of a flow tyranny, and of that avarice which exacted from its wretched inhabitants more rigorous toil than was compatible with their constitution and the climate.

This oppression was corval with the conquest of the country. All the lands were divided between the crown, the companions of Cortes, and the grandees or ministers who were nest in favour at the court of Spain. The Mexicans, appointed to the royal domains, were destined to public labours, which originally were considerable. The lot of those who were employed on the estates of individuals was still more:

': all ground under a dreadful yoke; they were island no wages given they and services were required.

that no wages given them, and fervices were required nder which the most robust men would have sunk:

the other, in order to comfort the people for an attachment, or to fosten their tyrants. which made him idolized by the one, and dreadthe other, had not the success he expected. The hope fighting awe, by a character revered among the Spaniards, stermined him to accept the bishopric of Chiapa in Mexico. Then he was convinced that this dignity was an infufficient gier against that avarice and cruelty which he endeavoured check, he abdicated it. It was then that this courageous, m, difinterested man, accused his country before the tribunal the whole universe. In his account of the tyranny of s Spaniards in America, he accuses them of having destroyed millions of the Indians. They ventured to find fault the acrimony of his stile, but no one convicted him of meration. His writings, which indicate the amiable turn disposition, and the sublimity of his sentiments, have a diffrace upon his barbarous countrymen, which me hath not, nor never will efface.

The court of Madrid, awakened by the representations of printuous Las Casas, and by the indignation of the whole and became sensible at last, that the tyranny it permitted was perpart to religion, to humanity, and to policy, and resolved break the chains of the Mexicans. Their liberty was now by constrained by the sole condition, that they should not

- andians who appeared to their interests, and were under no apprel these dignities hereditary. Their authority w supporting the police in their district, which in eight or ten leagues, to the collecting the tril dians who laboured on their own account, th being stopt by the masters whom they served, venting their flight by keeping them always un tion, and not luffering them to contract any eng their confent. As a reward of their services, 1 obtained from government a property. They w take out of the common stock two-pence halffor every Indian under their jurisdiction, At empowered to get their fields cultivated by fuch were not yet subject to the poll-tax; and to emp time of their marriage, in luch occupations as w their fex, without allowing them any falary exc tenance.

These institutions, which totally changed the Indians in Mexico, irritated the Spaniards to be conceived. Their pride would not suffer the Americans as free men, nor would their avait to pay for libour which hitherto had cost them a comployed themselves successively, or in combin monstrances, and violence, to effect the subvention ment which so from in continuous

nian territory of which their rathers had been . patchased them of the royal domain, or of the It was not their labour which enabled them acquifitions; for this they were indebted to the helf of having discovered, some of them, mines, others, which had been concealed at the time of the conquest. esteR number derived their resources from the priests and I to whom they owed their existence.

those who experienced a fortune less propitious, profor themselves, by the sole profits of their pay, more conite than they had enjoyed before they underwent a foreign We should be very much deceived if we should judge Parkient prosperity of the inhabitants of Mexico by what har hid by different writers of its emperor, its court, its and the governors of its provinces. Despotilin had produced those fatal effects which it produces every where. de state was sacrificed to the caprices, pleasures, and suce, of a small number of persons.

wernment drew confiderable advantages from the mines couled to be worked, and still greater from those which he hands of individuals. The falt works greatly added taue. Those who followed agriculture, at the time said a kind of a third of all the produce of the lands, belonged to them as their own property, or where only the farmers of them. Men who lived has

GENERAL DESCRIPTION OF

and abundant. Their houses are better built, better disp and better furnished. Shoes, drawers, shirts, a garment of or cotton, a ruff, and a hat, constitute their dress. The diwhich it has been agreed to annex to these enjoyments, has them better economists, and more laborious. This case, how is far from being universal; it is even very uncommon in vicinity of the mines, towns, and great roads, where tyr seldom sleeps: but we often find it with satisfaction in reparts, where the Spaniards are not numerous, and where have in some n

tople are very various; the The employ in easy circumstances, d intelligent, and y and most useful manufall themselves to the which are difpe whole empire. The most ed among the people of Th tiful manufa&u their old capital, and v. ne, which is called Angelos the center of this industry; here they manufacture cloth is pretty fine, calicoes that have an agreeable appearance, co flight filks, good hats, gold lace, embroidery, lace, glasses, a great deal of hard-ware.

The care of flocks affords a maintenance to some Mexi whom fortune or nature have not called to more distinguemployments. America, at the time it was discovered, had ther hogs, sheep, oxen, horses, nor even any domestic an Columbus carried some of these useful animals to St. Dom from whence they were generally dispersed, and at Mexico than any other place: these have multiplied prodigiously, count their horned cattle by thousands, whose skins are be an object of considerable exportation. The horses are destated, but the quality is compensated by the number. I land is here substituted for butter. Sheep's wool is dry, coand bad, as it is every where between the tropics.

The vine and olive tree have experienced the fame depacy: the cultivation of them was at first prohibited, we view of leaving a free market for the commodities of the mecountry. In 1706, permission was given to the Jesuits, a little afterwards to the Marquis Del Valle, a descendant Cortes, to cultivate them: the attempts have not proved cessful. The trials, indeed, that have been made, have not abandoned, but no person has solicited the liberty of sello an example which did not promise any great emolumer

104

Allege cultures have been more successful; cotton, sugar, and coccas; tobacco, and European corn, have all thriven in fine degree. The Spaniards are encouraged to prosecute the allege which these cultures require, from the happy circumfield of their having discovered iron mines, which were enfectly unknown to the Mexicans, as well as some mines of a high of copper that is hard enough to serve for implements of higherdry; all these articles, however, for want of men and highery, are merely consumed within the country. There is only the vanilla, indigo, and cochineal, which make a part of the trade of Mexico with other nations.

NEW-MEXICO.

New-Mexico is so called, because of its being discovered beer than Old-Mexico; is bounded on the north by high mounsuins, beyond which is a country alrogether unknown; by also by the gulph of California, and the Rio Colorado; extending, it is said, above one hundred miles from east to west, and about nine hundred from south to north; but the twenteth part of the country within these limits is neither culticated nor inhabited, either by Spaniards or Indians. As it lies the midst of the temperate zone, the climate, in general, is the midst of the temperate zone, the climate, in general, is pleasant; the summers, though very warm, are neither that y nor unwholesome; and the winters, though pretty sharp, the form being insupportable, and, for the most part, clear the lathy.

The greatest encomiums are lavished on the fertility of the the richness of the mines, and the variety of valuable modities produced in this country. It is faid to be beautidivertified with fields, meadows, rifing grounds, and ers; abounding with fruit and timber trees, turquoiles, emeand other precious stones, mines of gold and silver, a variety of wild and tame cattle, fish and fowls. Upon whole, we may fafely affirm, that New-Mexico is among pleanntest, richest, and most plentiful countries in Ameor any other part of the world. There are few great or tible rivers in it: the most considerable are, the Rio Solado. Rio del Norte, which, with leveral smaller streams, fall gulph of Mexico. On the coast of the gulph are ays, ports, and creeks, which might be eafily convertbut excellent harbours, if the Spaniards were possessed of 1 portion of that commercial spirit which animates the other white nations of Europe.

The Spanish writers tell us, that New-Mexico is inhabited by a great variety of Indian nations or tribes, totally unconnected with each other; but the principal are the Apacht, a brave, warlike, resolute people, fond of liberty, and the inveterate enemies of tyranny and opporellion. About the there of the last century, thinking themselves aggreed by the Spanish government, they made a general infurrection, and do a great deal of mischief, but were at last obliged to submit, and have since been curbed by stronger garrisons. Most of the natives are now Christians. When the Spaniards first entered

this country, they he cultivated, their infinite. Their flocks comfortably than me to religion, they we moon; but whether fufficiently informed.

es well clothed, their land and their houses built with erous, and they lived more or savages of America. As ad worthipped the sun and human sacrifices, we are not

As to the number of ______ ces of this country, we can advance nothing certain; fome writers making them only aveothers ten, infeen, twenty, and twenty-five, but adding no description, either of them, or the towns contained in them, or the towns are told flands near that aree of the Rio del Norte, in 36° north latitude, and about one hundred and thirty leagues from the gulph; that it is a well-built, handlome, such town, and the feat of the before, to the sign of Mexico, or New Spain.

CALIFORNIA.

California is the most nontherly of all the Spanish dominions on the continent of America, is tometimes distingualized by the name of New-Albion, and the Isas Carabinas: but the most ancient appellation is Colifornia, a world probably owing to some accident, or to some words spoken by the Indians and milimiderstood by the Spaniards. For a long time California was thought to be an island, but Father Caino, a German Jesuit, discovered it to be a peninsula joining to the coast of New-Mexico, and the southern pasts of America. This peninsula extends from Cape St. Schattian, lying in north latitude 43° 30°, to Cape St. Lucar, which lies in north latitude ° 32°. It is divided from New-Mexico by the gulph, or,

32'. It is divided from New-Mexico by the gulph, or, e call it, the like of California, or Vermillion fea, on 1; on the north, by that part of the continent of North-

America which is least known; and on the west and south, by the Pacistic Ocean or great South sea. The coasts, especially towards the Vermillion sea, are covered with inhabited sslands, as some of which the Jesuits have established settlements, such as St. Clement, Paxaros, St. Anne, Cedars, so called from the yeat number of these trees it produces, St. Joseph, and a multitude of others. But the islands best known, are three lying of cape St. Larca, towards the Mexican coast. These are called Les Tres Marias, "the three Maries." They are but small, here good wood and water, salt pits, and abundance of game; therefore the English and French pirates have sometimes wintered there, when bound on cruizes in the South Seas.

As California lies altogether within the temperate zone, the makes are neither chilled with cold nor fcorched with heat; and, indeed, the improvements in agriculture made by the Jeaits, afford ftrong proofs of the excellency of the climate. In lose places the air is extremely hot and dry, and the earth wild, negged, and barren. In a country stretching about eight hundel miles in length, there must be a considerable variation of foil and climate; and, indeed, we find, from good authority, that California produces some of the most beautiful lawns, as well as many of the most inhospitable defarts in the universe. Upon the whole, although California is rather rough and craggy, weare affored by the Jeluit Vinegas, and other good writers, that with due culture, it furnishes every necessary and conveniency of life; and that even where the atmosphere is hottest, vapours ring from the fea, and dispersed by pleasant breezes, render st of a moderate temperature.

The peninfula of California is now flocked with all forts of domeflic animals known in Spain and Mexico. Horses, mules, alles, oxen, sheep, hogs, goats, and all other quadrupeds imported, thrive and increase in this country. Among the native animals is a species of deer, of the fize of a young heafer, and picarly refembling it in shape; the head is like that of a deel, withe horns thick and crooked like thole of a ram. The hoot of the animal is large, round, and cloven, the flan sported, but the hair thinner, and the tail sharper than that of a deer. Its 1ch is greatly effected. There is another animal peculiar to this country, larger and more bulky than a theep, but greatly telembling it in figure, and, like it, covered with a fine black or white wool. The fleih of the animal is nourthing and deficious, and happily for the natives, is to abundant, the tething more is required than the trouble of heather, as the animals wander about in droves in the forcils and on the money-

Father Torquemado describes a creature which he calls a tains. species of large bear, something like a buffalo, of the fize of a floor, and nearly of the figure of a flog; its hair is a quarter of a yard in length, its neck long and aukward, and on its forehead are hours branched like those of a stag. The tail is a yard in length, and half a yard in breadth, and the honfs cloven like those of an ox. With regard to birds, we have but an imperfect account; only, in general, Father Venegas tells us that the coast is plentifully stored with peacocks, bustards, geefe cratics, and most of the birds common in other parts of the world. The quantity of fish ch refort to thele coafts are incredible. Silmon, turbot. el, fkate, mackerel, &c. are caught here with very lit sle; together with pearl oylters, common oysters, le d a variety of exquifite fhell fish. Plenty of turtle caught on the coafts. On the South fea coafts are for peculiar to it, and perhaps the most beautiful in the we their luftre furpassing that of the finest pearl, and darting their rays through a transparent varnish of an elegant vivid blue, like the lapis lauzuli. The fame of California for pearls foon drew forth great numbers of adventurers, who fearched every part of the gulph, and are field employed in that work, not withflanding fashion has greatly diminished the value of this elegant natural production. Father Torquena do observes, that the fea of California affords very rich pool filheries, and that the hoffias, or beds of oxfer, may be feen in three or four fathoms water, almost as plain as if they were on the furface.

The chargalty of the peninfula towards cape St. Lucar is more level, temperate, and fertile than the other parts, and confequently more woody. In the more diffant parts, even to the farthest minions on the cash coast, no large timber hath yet been discovered. A species of manna is found in this country, which, according to the accounts of the Jesuits, has all the sweetness of refined sugar without its whiteness. The natives sirally believe that the juice drops from heaven.

fornians are well made, and very firing; they are pufillanimous, inconflant, flopid, and even intendim deferving of the character given to the Indians. Before the Europeans penetrated into California, and no form of religion. The infliminates, is many tales concerning them, but they to evide marks of forgery, as not to be worth repeating, was then an attending of leveral cottages more is, that were all mutually confederated by alli-

mest but without any chief. They were ftrangers even to find obtained. No kind of drefs was used by the men, but the women made use of some covering, and were even fond of transcriting themselves with pearls and such other trinkets as the country afforded. What mostly displayed their ingenuity was the construction of their fishing nets, which are faid by the setting to have even exceeded in goodness those made in Europe; they were made by the women, of a coarse kind of slax procured from some plants which grow there. Their houses were built of branches and leaves of trees; nay, many of them were only inclosures of earth and stone, raised half a yard high, without any covering, and even these were so small, that they could not street themselves at length in them. In winter they dwelt under ground, in caves either natural or artificial.

In 1526, Ferdinand Cortes having reduced and fettled Mixico, attempted the conquest of California, but was uliged to return, without even taking a furvey of the counw, a report of his death having disposed the Mexicans to partil infurrection. Some other attempts were made by the officers of Cortes, but these were also unsuccessful, and this taluable coast was long neglected by the Spaniards, who, to this day, have but one fettlement upon it. In 1595, a galleon was fent to make discoveries on the Californian shore, but the veiled was unfortunately loft. Seven years after, the Count de Monteroy, then viceroy of New-Spain, sent Smillin Biscayno on the same design with two thips and tender, but he made no discovery of importance. 1684 the Marquis de Laguna, also viceroy of New-Spain, equiched two fhips with a tender to make discoveries on the the of California; he returned with an indifferent account, but was among the first that afferted that California was not brand, which was afterwards confirmed by Father Camo, as analy related. In 1697, the Spaniards being discouraged by the losses and disappointments, the Jesuits solicited and obtainexpermission to undertake the conquest of California. Thene anved among the favages with curioficies that might amule them, own for their food, and clothes for which they could not bat process the necessity. At prefent, th near cape St. Lucar, is made use of for no refreshment for the Manilla diffionaries.

WMENT COMMIT

The clergy are exceedingly numerous in Mexico; the priests, make a fifth part of the white sentenness, both here and in other parts of Spanish America.

The city of Mexico is the oldest in America, of which we tone any account. The Abbé Clavigero, who is our authority for the preceding account of this country, dates its foundation as far back as 1325. It is fituated in the charming vale of Mexico, on several small islands, in lake Tetzcuco, in north leade 19° 26', and 276° 34' west longitude from Perro. This vale is surrounded with losty and verdant mountains, and somethy contained no less than forty eminent cities, besides williges and hamlets. The city is subject to frequent inundations, is a casely accounted for from its local situation, the lake in which it stands being the reservoir of the waters slowing from the neighbouring mountains.

Concerning the ancient population of this city, there are varose opinions. The historians most to be relied on fay, that a wa nearly nine miles in circumference, and contained upwards of fixty thousand houses, containing each from four to ten inhabitants. Some historians reckon one hundred and twenty thousand, and some one hundred and thirty thousand houses. By a late accurate enumeration, made by the magistrates and priests, it appears that the present number of inhabitants exceeds two hundred thousand. We may form some idea of its repuloulness from the quantity of pulque* and tobacco which at daily confumed in it, afcertained from the custom-house books, February 23, 1775. Every day upwards of one honand ninety thousand pounds of pulque are carried into the cty, which are almost solely consumed by the Indians and Mubuces, who drink this beverage. The tax upon it amounts amally to about two hundred and eighty thousand crowns. The daily confumption of tobacco is reckoned at one thouland two hundred and fifty crowns.

The greatest curiosity in the city of Mexico is their floating press. When the Mexicans, about the year 1325, were sub-field by the Colhuan and Tepanecan nations, and confined to the small islands in the lake, having no land to cultivate, they were taught by necessity to form moveable gardens, which bated on the lake. Their construction is very simple. They

^{*} Pulque is the usual wine or beer of the Mexicans, made of the fermented act of the maguei. This liquor will not keep but one day, and therefore and a made is daily consumed.

fmill, or with the affillance of others, if it is large, condults it wherever he pleafes, with the little tree and hut upon it. That put of the ifland where these floating gardens are, is a place of delightful recreation, where the senses receive the

The trade of Menico confifts of three great branches, which entend over the whole world. It carries on a traffic with Europe, by La Vera Cruz, fituated on the gulph of Mexico, of the North fea; with the East-Indies, by Acapulco on the South as, two hundred and ten miles fouth-west of Mexico; and the South-America, by the same port. These two sea ports Vera Cruz and Acapulco, are admirably well situated for the commercial purposes to which they were applied. It is be nears of the former that Mexico pours her wealth over the

tinle world, and receives in return the numberless luxuries and screfferies which Europe affords her. To this port the fleet has Cadie, called the Flots, confifting of three-men of war, as imnyoy, and fourteen large merchant ships, annually arrives bout the beginning of November. Its cargo confifts of almost very commodity and manufacture of Europe; and there are lew nations but have more concern in it than the Spaniards, who and out little except wine and oil. The profit of thefe, with the freight and commission to the merchants, and duty to the ing, is all the advantage which Spain derives from the American nerce. When all the goods are landed and disposed of at Li Vera Cruz; the fleet takes in the plate; precious stones, and ather commodities for Europe. Some time in May they are rendy to depart. From La Vera Cruz they fail to the Havannah, hibe ille of Cuba, which is the rendezvous where they meet galleons, another fleet which carries on the trade of Terra ma by Carthagena, and of Peru by Panama and Porto Bello. When all are collected and provided with a convoy necessary for their fafety; they fteer for Old-Spain;

Acapulco is the fea port by which the communication is kept p between the different parts of the Spanish empire in America; and the East-Indies. About the month of December, the great falleon, attended by a large fhip as a convoy, which make the only communication between the Philippines and Mexico, annually arrive here. The cargoes of their ships (for the convoy; though in a clandestine manner, likewise carries goods) consist of all the rich commodities and manufactures of the cast. At the same time the annual ship from Lima, the capital of Peru; tomes in, and is computed to bring not less than two millions of pieces of eight in filver, befides quick-filver, and other valuable commodities, to be laid out in the purchase of the galleons carpoes: Several other ships, from different parts of Chili and Peru, meet upon the same occasion. A great fair, in which the temmodities of all parts of the world are bartered for one ano. ther, lasts thirty days. The galleon then prepares for her voy-Ige, loaded with filver and luch European goods as have been thought necessary. The Spaniards, though this trade be carried on entirely through their hands, and in the very heart of their dominions, are comparatively but small gainers by it. For as they allow the Dutch, Great-Britain, and other commercial states, to furnish the greater part of the cargo of the flota, to the Spanih inhabitants of the Philippines, tainted with the indolence which ruined their European ancestors, permit the Chinese

114 G NERAL DESCRIPTION OF

merchants to furnish the greater part of the cargo of galleon. Notwithstanding what has been said of Vera Cruz Acapulco, the city of Mexico, the capital of the empire, of to be considered as the center of commerce in this part of world; for here the principal merchants reside, and the gre part of the business is negociated. The East-India goods Acapulco, and the European from Vera Cruz, also pass that this city. Hither all the gold and filver come to be collected the king's fifth is deposited, and here are wrough those utensils and ornaments in plate, which are every fent into Europe.

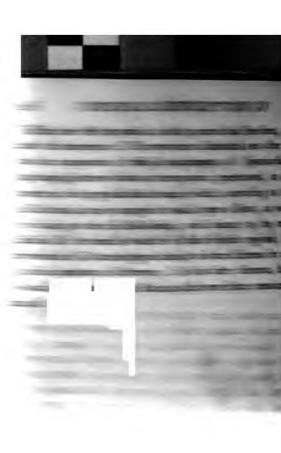

The empire of Mexico was finally fubdued by Corte the year 1521. Montezuma was at that time emperor of M In the course of the war, he was treacherously t by Cortes, and held as a prisoner. During the imprison of Montezuma, Cortes and his army had made repeated at on his subjects, but without success. Cortes was now d mined, as his last resource, to try what effect the interpol of Montezuma might have to foothe or overawe his fub This unfortunate prince, at the mercy of the treacherous S aids, and reduced to the fad necessity of becoming the ir ment of his own difgrace, and of the flavery of his tub advanced to the battlements in his royal robes, in all the j in which he uted to appear on folemn occasions. At of their fovereign, whom they had long been accustome honour, and almost to revere as a god, the weapons dro from their hands, every tongue was filent, all bowed heads, and many profitated themselves on the ground. tozuma addressed them with every argument that could mi their rage, or perfuade them from hostilities. When he e his discourse, a fullen mumur of disapprobation ran thi the crowd: to this succeeded reproaches and threats; and fury rifing in a moment, they violently poured in whole if of arrows and vollics of flones upon their unhappy mor two of the arrows flruck him in his body, which, with the of a stone on his temple, put an end to his life. Guatic fucceeded Montezuma, and maintained a vigorous oppo against the assaults of Cortes; but he, like his predecessor, a noble defence, was forced to tubmit, and his capital was t ed from him by Cortes and his followers.

The exultation of the Spaniards, on accomplishing arduous enterprile, was at first excellive. But this was qualified by the cruel disappointment of those sanguine

which had enimeted them smidft fo many hardfhips and dangers. bled of inexhaustible wealth which they expected from separing markers of Montezuma's treasures, and the ornaments formany temples, their rapaciousness could collect only an implificable booty amidst ruins and desolation. Guatimozin. was of his impending fate, had ordered what remained of the inher smalled by his ancestors to be thrown into the lake. The latine suziliaries, while the Spaniards were engaged in conflict with the enemy, had carried off the most valuable part of the field. The furn to be divided among the conquerors was for imil, that many of them disclaimed to accept of the pittance which fell to their share, and all murmured and exclaimed; some against Cortes and his confidents, whom they suspected of laving secretly appropriated to their own use a large portion of the riches which would have been brought into the common Ack; others against Guatimozin, whom they accused of obstimy, in refuting to discover the place where he had hidden his treasure.

Arguments, intreaties, and promises, were employed in meder to foothe them, but with so little effect, that Cortes, from folicitude to check the growing spirit of discontent, gave my to a deed which stained the glory of all his great actions. Without regarding the former dignity of Guatimozin, or feeling reverence for those virtues which he had displayed, he Miched the unhappy monarch, together with his chief favourto torture, in order to force from them a discovery of the mal treasures, which it was supposed they had concealed, Sutinozin bore whatever the refined cruelty of his tormentors mild inflict, with the invincible fortitude of an American varior, His fellow-sufferer, overcome by the violence of the muith, turned a dejected eye towards his master, which seemdisimplore his permission to reveal all he knew. But the prince, darting on him a look of authority minwith scorn, checked his weakness, by asking, " Am I now spring on a bed of flowers?" Overawed by the reproach, persevered in his dutiful filence, and expired. Cortes, ped of a scene so horrid, rescued the royal victim from hands of his torturers, and prolonged a life reserved for rindignities and fufferings.

The gold and filver, according to Cortes, amounted only to one hundred believe thousand pelos, a fum far inferior to that which the Spaniards had breaky divided in Mexico.

different properties and the of a committee property and the

all is more over want very rided bases to an amount of the art and WE now enter upon the description of that part of the globe, where the human mind will be successively surprised with the sublime and aftonishing works of Nature; where rivers of amazing breadth flow through beautiful and widely. extended plains, and where lofty mountains, whole fummits we covered with eternal fnow, intercept the course of the cleuds, and hide their heads from the view of mortals. In some parts of this extensive region, nature hath bountifully bellowed her treasures, and given every thing necessary for the convenience and happiness of man. We have only to regret, that a fet of avaricious men have successively drenched with innocent blood these plains, which are so beautifully formed and enriched by the hand of Nature; and that the rod of MANISH DESPOTISM has prevented the population of a counby which might have supported millions of beings in affluence.

DIVISIONS.

South-America, like Africa, is an extensive peninsula, connected with North-America, by the isthmus of Darien, and divided between Spain, Portugal, France, Holland, and the Aborigines, as follows:

Spanish Dominions,

Portuguese, . . Brazil,
French, . . . Cayenne,
Dutch, . . . Surinam,
Aborigines,

Aborigines,

Terra Firma,
Paraguay.
Chili,
Paraguay.
Brazil,
Cayenne,
Surinam,
Amazonia,
Patagonia.

Of these countries we shall treat in their order,

SOUTH-AMERICA.

TERRA FIRMA, ox CASTILE DEL ORO.

attender and

TERRA FIRMA is fituated between 60° and 82° west longitude, and the equator and 12 degrees north latitude; ill length is one thousand four hundred miles, and its breadth seven hundred: it is bounded on the north by the Atlantic ocean (called there the North sea;) on the east by the Atlantic ocean and Surinam; on the south by Amazonia and Peru; and on the west by the Pacific ocean. It is divided into two grand divisions, North and South; these are again subdivided into provinces.

The northern divition containing, 1. Darien, or Terra Firma Proper: 2. Carthagena: 3. St. Martha: 4. Venezamia: 5. Comana: 6. Parta, or New-Andalusia.

The fouthern division containing, 1. NEW-GRANADA: 2. PQ PAYAN.

DARIEN, OR TERRA FIRMA PROPER.

Darien is the narrow isthmus, or neck of land, that, properly speaking, joins North and South-America together, but is gene rally reckoned as part of the latter. It is bounded on the north by the North sea, on the south by the South sea, on the east by the gulph or river of Darien, and on the west by another par of the South sea and the province of Veragua. It lies in th form of a bow, or crescent, about the great bay of Panama is the South sea, and is three hundred miles in length and fixty is breadth. This province is not the richest, but is of the greates importance to Spain, and has been the scene of more action than any other in America. The wealth of Peru is brough hither, and from hence exported to Europe. This has induced many enterprising people to make attempts on Panama, Porto BeHo, and other towns of this province, in hopes of obtaining a rich.

se made his profession the instrument of indulging it, by to the new western world, under pretence of converting dians to the religion of the old. In his courses there, he sequainted with Capt. Dampier and Mr. Wafer, who wide published, the one his Voyages and the other his in the region where the separation is narrowest bethe Atlantic and the South seas; and both of whom, pary the first, appear by their books to have been men of rable observation. But he got much more knowledge who could neither write nor read, by cultivating the statice of some of the old Buccaneers, who, after survivir glories and their crimes, still, in the extremity of age fortune, recounted with transport the ease with which id passed and repassed from the one sea to the other, somea hundreds together, and driving strings of mules before saded with the plunder of friends and of foes. Paterson. examined the places, satisfied himself, that on the isthmus jen there was a traft of country running acrois from the ie to the South fea, which the Spaniards had never poland inhabited by a people continually at war with them; posithe coast, on the Atlantic fide, there lay a string of realled the Sambalocs, uninhabited, and full of natural and forests, from which last circumstance one of them fled the Island of the Pines; that the fees there were filled

to the country from whence they went; but by to to to the sample protection of the protection of the time of the t

Columbia.

Paterion's original intention was to offer his project to Engm the benefit common to all nations, of shortening the length voyages to the East-Indies, but by the effect which it would we had to connect the interests of her European, West-Indian, merican, African and East-Indian trade. But Paterson hav-I few acquaintance, and no protection in London, thought drawing the public eye upon him, and ingratiating himfelf a monied men and with great men, by affisting them to model project, which was at that time in embryo, for erecting the of England. But that happened to him which has hapsed to many in his fituation; the persons to whom he applied de use of his ideas, took the honour of them to themselves, we civil to him for a while, and neglected him afterwards. therefore communicated his project of a colony only to a w persons in London, and these few discouraged him. He next made offer of his project to the Dutch, the Hamighers, and the elector of Brandenburgh; because, by means the passage of the Rhine and Elbe through their states, he

Piterson, on his return to London, formed a friend with Mr. Fletcher of Salton, whole mind was inflamed wathe level of pulsac good, and all of whole ideas to procure -I of a ful-limity in them. Fletcher brought Paterson dow Southed with him, prefented him to the Marquis of Tweed then consiler for Sporland; and then, with that power with 🛥 vehement ipieit al veys peileiles over a diffident one, perfus of the Morques by arguments of public good, and the horawhich would redound to his administration, to adopt the p p.d. Lord 5% a col Mr. Johnston, the two secretaries Thite, petronilled that subdities in Paterion which they possess in themselves; and the lord advocate, Sir James Stuart, t - A tome man who had alpaied the Prince of Orange's declaratio at the revolution, whole for was married to a niece of Lor "d Stair, went inturally along with his connections, pm: ns. in June 1505, procured a statute from parliamens. and afterwards a chatter from the crown in terms of it, for creating a trading company to Africa and the new world, with power to plant colonies and build forts, with confent of the inhibitants, in places not possessed by other European nations.

Pat iffen, now finding the ground firm under him, and that Ite was supported by almost all the power and talents of his country, the character of Pletcher, and the function of an act of purliment and joyal charter, threw his project boldly upon the public, and opened a tableription for a company. The Irenzy of the Scotch nation to fign the folemn league and concerns, never exceeded the rapidlay with which they ran to fubicible to the Darien company. The noblity, the gentry, the merchants, the people, the royal burghs without the exception of one, and most of the other public bodies, subcribed. Young women them their little fortunes into the flock; widows is detheir yentimer to get the command of money for the fame perpose. Almost in an instruct four handred thousand p unds were a delegated in Scotland, although it be now known, to to three was not at that time above eight hundred thousand planeds of caffe in the bon, I made The famous Mr. Law, then a routh, dierozols confired, that the facility with which he i w the parties of appealation communicate itself from all to all, far sfield blin of the polibility of producing the fame effects from the time caute, but upon a larger scale, when the Duke of Orleans, in the year of the Miffethppi, engaged him against his will to term his bank into a bubble. Paterion's project, which had been received by Rrangers with fears when opened

to them in private, filled them with hopes when it came to them upon the wings of public fame: for Col. Erthine, fon to Lord Cardrofs, and Mr. Hildane, of Gleneagler, the one a gracious branch of a generous ftem, and the other a country grademen of fortune and charafter, having been deputed to receive fubscriptions in England and on the continent, the Laglift subscribed three hundred thousand pounds, and the Dutch and Hamburghers two hundred thousand pounds more.

In the mean time the jealoufy of trade, which has done More mischief to the trade of England than all other causes put together, created an alarm in England; and the Houses of Lords and Commons, without previous inquiry and reflection, on the 13th of December, 1695, concurred in a joint address to the king against the establishment of the Darien company, as detrimental to the interest of the East-India company. Soon after, the Commons impeached some of their own countrymen for being instrumental in creeting the company; and allo some of the Scotch nation, one of whom was a peer, Lord Belhaven; that is to fay, they arraigned the subjects of another country, for making use of the laws of their own. Among fix hundred legislators, not one had the hippy ray of · genius to propose a committee of both parliaments, to inquire into the principles and confequences of the establishment; mif these should, upon inquiry, be found, that the benefit of it should be communicated, by a participation of rights to both nations. The king's answer was, "That he had been ill-advised in Scotland," He soon after changed his Scottish ministers, and fent orders to his resident at Humburgh to pre-Lent a memorial to the senate, in which he disowned the company, and warned them against all connections with it. The feate fent the memorial to the affembly of merchants, who returned it with the following spirited answer: " We look spon it as a very strange thing, that the King of Britain should offer to hinder us, who are a free people, to trade with whom please; but are amazed to think, that he would hinder us from joining with his own subjects in Scotland, to whom he had lately given fuch large privileges, by to telemn an accord paliment." But merchants, though mighty prone to palificat, the eatily intimidated. The Dutch, Hamourgh, and London metchants, withdrew their fableriptions.

The Scotch, not discouraged, were rather animated by this specifion; for they converted it into a proof of the envy of the English, and of their confeignfiness of the great advantages

which were to flow to Scotland from the colony. pany proceeded to build fix ships in Holland, from thirty-lin to fixty guns, and they engaged twelve hundred men for the colony; among whom were younger fons of many of the noble and most ancient families of Scotland, and fixty officers whee had been disbanded at the peace, who carried with them well of their private men generally railed on their own, or the estates of their relations, as they knew to be faithful and brave : and most of those were Highlanders. The Scotch parliaments on the 3th of August, 1698, unanimously addressed the king to support the company. The lord president, Sir Hugh Dal rymple, brother to Lord Stair, and head of the bench, and the and of the bar, jointly drew lord advocate, Sir Jamemorials to the king, of argument, information and arrangement: in t lesended the rights of the company upon the n onstitutional and of public law. And neighbor with a mixture of furprile and respect, saw the m of Europe fending forth the most gallant and the rous colony that had ever gone from the old to th

On the 26th of July, or the year 1698, the whole city of Edinburgh poured down upon Leith to see the colony depart, amidft the tears, and prayers and praifes of relations and friends, and of their countrymen. Many feamen and foldiers, whole fervices had been refuled, because more had offered themfelves than were needed, were found hid in the fhips, and when ordered afhore, clung to the ropes and timbers, imploring to go without reward with their companions. Twelve hundred men failed in five flout thips, and arrived at Darien in two months, with the lots of only fifteen of their people. At that time it was in their power, me it of whom were well born, and all of them hardily bred, and insied to the fatigues and dangers of the late war, to have gone from the northmost part of Mexico to the fouthmost of Chili, and to have overfurned the whole empire of Spain in the South feas: but modeff, respecting their own and their country's character, and afind of being accused that they had plunder, and not a fettiement, in view, they began with purchasing lands from the natives, and lending melliges of amity to the Spanish governors within their reach; and then fixed their itation at Acta, calling it New St. Andrew, from the name of the tutcher faint of Scotland, and the country itieff New-Calcdonia. One of the ficies of the harbour being formed by a long narrow neck of land which ran into the lea, they cut it across to as to join the

the religion to all nations. This himinous idea-

atch East-India company having pressed the king, susurence with his English subjects, to prevent the setment at Darien, orders had been fent from England to the espors of the West-Indian and American colonies, to issue dimitions sgainst giving affishance, or even to hold corresdence with the colony, and these were more or less harshly refled, according to the tempers of the different governors. Scotch, trusting to far different treatment, and to the lies which they expected from those colonies, had not ght provisions enough with them, they fell into diseases bed food and from want of food. But the more generous s, by hunting and fishing for them, gave them that relief 1 fellow Britons refused. The lingered eight months, mg, but in vain, for affishance from Scotland, and almost them either died or quitted the settlement. Paterson, had been the first that entered the ship at Leith, was the ho went on board at Darien.

ring the space of two years, while the establishment of olony had been in agitation, Spain had made no complaint igland or Scotland against it: the Darien council even in their papers, which are in the Advocates Library, he right of the company was debated before the king, in ace of the Spanish ambassador. before the colony left

counts, not meeting with all the attention they expertise higher, they paid court to the inferior ranks of the and by that means threw divitions into the colony,

to the council abroad. Or

The last party that joined the second colony at Dar it had been three months fettled, was Captain Co I mab, with a company of the people of his offate. had commanded in Flanders, and whom he carried to his own ship. On their arrival at New St. Andrew, t intelligence had been lately received, that a Spanish fixteen hundred men, which had been brought from it the South fea, lay encamped at Tubucantee, waiting a Spanish squadron of cleven ships which was expectarrive, when they were jointly to attack the fort. tary command was offered to Captain Campbell, in co to his reputation and to his birth, who was deteended families of Breadalbane and Athol. In order to preve attack, he refolved to attack first; and therefore, on ti day after his arrival, he murched with two hundr Tubucantee, before his arrival was known to the enemy the camp in the night-time, diffipated the Spanish s much fluighter, and returned to the fort the fifth defound the Spanish ships before the harbour, their troo and almost all hope of help or provision cut oil; ye a fiege near fix weeks, till almost all the officers were

TERRA FIRMA, OR CASTILE DEL ORO.

say by their approaches had cut off his wells, and his balls no to far expended, that he was obliged to melt the pewter his of the garrifon into balls. The garrifon then capitulated, I obtained not only the common honours of war and fecurity the property of the company, but, as if they had been continuous, exacted hostages for performance of the conditions. Jaim Campbell alone defined to be excepted from the capituling laying, he was fure the Spaniards could not forgive him thickhief which he to lately had done them. The brave, by becoming, often escape that death which they seem to profix: Captain Campbell made his escape in his vessel, and, paping no where, arrived safely at New-York, and from ence to Scotland, where the company presented him with a ld medal, in which his virtue was commemorated, to instance is said with the love of heroic actions.

A harder fate attended those whom Captain Campbell lest at nim. They were so weak in their health as not to be able weigh up the anchors of the Riling Sun, one of their ships, ith carried fixty guns; but the generous Spaniards affished in going out of the harbour she ran aground: the prev Impting, and to obtain it, the Spaniards had only to stand and look on; but shewed that mercy to the Scotch in mi, which one of the countrymen of those Scotch, General ing returned to the posterity of the Spaniards at the end of hie configration at the fiege of Gibraltar. The Darien "being leaky and weakly manned, were obliged in their to take shelter in different ports belonging to Spain and and. The Spaniards in the new world showed them kindis the English governments showed them none; and in one to one of their ships was seized and detained. Of these Companie Compbell's ship and another small one were saved: Royal Sun was lost on the bar of Charleston, and of the my, not more than thirty, faved from war, shipwreck or wer law their country again.

heren, who had stood the blow, could not stand the reline of misfortune: he was seized with a lunacy in his passplane after the ruin of the first colony, but he recovered hown country, where his spirit, still ardent and unbroke, stand a new plan to the company, sounded on the idea of William, that England should have the joint dominion of tankement with Scotland.

furvived many years in Scotland, pitied, respected, but

reparation of his losses from the equivalent-money England to the Darien company, but got nothing, grant to him from a public fund would have been only human ty, not a political job.

Thus ended the colony of Darien. Men look works of poets for subjects of fatire, but they are n to be found in the records of history. The application Dutch to King William against the Darien company the fureft of all proofs, that it was the interest of th islands to General it. Fordand, by the imprudence of that fettl portunity of gaining and co to herfe mercial empire that proba will be se treated with Scotland, in of the c ny, for a joint possession of nion of the kingdoms, w tlement, overeign to them, that possession c . Had she treated with tainly h relinguish , or at least to give a palfa

the isthmus, upon receiving duties so high as to overba the chance of loss by a contraband trade, she had prob tained either the one or the other. Had she broke wit for the fake of gaining by force one of thole favours, ?! have loft far less than she afterwards did by carrying a that country for many years, to force a king upon the S against their will. Even a rupture with Spain for Dari had proved fuccetsful, would have knit the two natio ther by the most folid of ties, their mutual interest; English must then have depended upon Spain for the s. their caravans by land, and the Spaniards upon England fafety of their fleets by fea. Spain and England wou been bound together as Portugal and England have ion and the Spanish treasures have failed, under the wings of navies, from the Spanish main to Cadiz, in the same ma the treasures of Portugal have failed under the same profacred and untouched, from the Brazils to Lisbon.

Panama is the capital city of this province, where the fures of gold and filver, and the other rich merchan Peru, are lodged in magazines till they are fent to Europe is fituated west longitude 820 154, north latitude 89 57

When Guzman first touched at this place in 1514, fisted entirely of fishermen's huts. Orius d'Avila se colony here in a few years after, and in 1521 it was con a city by the emperor Charles V, with the proper pri

TERRA FIRMA, OR CASTILE DEL ORO.

In 1670, it was facked and burnt by John Morgan, an English adventurer, who had the preceding year taken Porto Bello, This misfortune induced the inhabitants to remove the city to as prefent fituation, distant about a league from the place where d before. For the greater fecurity the new city was inclosed by a free-stone wall, and the houses were built of stone and brick. Since that time feveral bastions have been added, and now there is always a complete garrison maintained, and the walls are mounted with large cannon. But all these precautions could not fave this city from another misfortune; it was entirely confurmed by fire in the year 1737. After this accident it was again rebuilt, in the manner as it now stands, with near elegant houses, but not magnificent. The inhabitants are rather independent in their fortunes than rich; there are few of them copulent, and scarce any in a state of poverty. As to the harbour it is convenient, and well fecured against storms by a number of furrounding islands, and is capable of containing the bigelt fleets. Here the royal audience is feated, at which the governor of Panama relides; for which reason the city is commonly deemed the capital of the province.

This place, a little while after it was founded, became the capital of the kingdom of Terra Firma. Some hopes were at first entertained from the three provinces of Panama, Darien, and Veragua, which composed it, but this prosperity vanished inflantaneously. The savages of Darien recovered their independence, and the mines of the two other provinces were found to be neither sufficiently abundant, nor of an alloy good enough to make it worth while to work them. Five or fix small boroughs, in which are seen some Europeans quite naked, and a very small number of Indians who have come to reside there, form the whole of this state, which the Spaniards are not shamed of honouring with the great name of kingdom. It is in general barren and unwholesome, and contributes nothing to take but pearls.

The pearl fishery is carried on in the islands of the gulph. The greatest part of the inhabitants employ such of the negroes in it as are good swimmers. These slaves plunge and re-plunge in the sea in search of pearls, till this exercise has exhausted their strength or their spirits.

Every negro is obliged to deliver a certain number of oysters. if it is mit in which there are no pearls, or in which the pearl is not firely formed, are not reckoned. What he is able to find

Var. IV.

Ņ

boy and the itipulated obligation, is confidered as his indisputable property; he may fell it to whom he pleases, but commontly he called it to his mafter at a moderate price.

Sea month is, which abound more about the islands where you'll are found than on the neighbouring coasts, render this to my differents. Some of these devour the divers in an inflant. The monta sish, which derives its name from its figure, surrounds them, relis them under its body, and suffocates them. In order to disturb the month fuch enemies, every diver is armed with a possibility the moment he perceives any of these workeious fish, he estacks them with precaution, wounds them, and drives them away. Notwithstanding this, there are always some sisherous destroyed, and a great number crippled.

The pearls of Panama are commonly of a very fine water. Some of them are even remarkable for their fize and figure; those were formerly fold in Europe. Since art has imitated them, and the patilon for diamends has entirely superfeded, or prodigiously distabilised the use of them, they have found a new mart more advant goods than the first. They are carried to Peru, where they are in great estimation.

This branch of trade has, however, infinitely lefs contributed to give report if in to Panama, than the advantage which it hath long enjoyed or being the mart of all the productions of the country of the Incis that are deflined for the old world. There riches, which are brought hither by a small fleet, were carried, some on mules, others by the river Chagre, to Porto Eello, that is situated on the northern coast of the isthmus, which separates the two seas.

CARTHAGENA.

Carthagena is one of the mest considerable provinces in this territory, on account of the great trade carried on by the capital, for the country itself is neither sertile, rich, nor populous. The capital city, called likewise Carthagena, is situated in west-longitude 77°, and north latitude 11', on a sandy island, by most writers called a penintula; which forming a narrow passage on the south-west, opens a communication with that called Tierra Bendia, as far as Bocco Chica. The little island which now joins them was formerly the entrance of the bay, but it having been filled up by orders of the court, Bocco Chica became the only entrance; this, however, has been filled up since the attempt of Vernon and Wentworth, and

the old passage again opened. On the north fide the land is so mirrow, that before the wall was begun, the distance from fea to fea was only thirty-five toiles; but afterwards mlarging, it forms another island on this fide, so that excepting these two places, the whole city is entirely furminded by falt water. To the eastward it has a communicetien, by means of a wooden bridge, with a large fuburb, Mid Xemani, built on another island, which is also joined to the continent by a bridge of the same materials. The femilications both of the city and fuburbs are built after the noten manner, and lined with free-stone; and in time of peace, the garrison confifts of ten companies, of seventyfeven men each, besides militia. The city and suburbs are well laid out, the fireets firait, broad, uniform, and well pared. All the houses are built of stone or brick, only one they high, well contrived, neat, and furnished with balconits and lattices of wood, which is more durable in that climite than iron, the latter being foon corroded by the acrimonious quality of the atmosphere. The climate is exceedingly unhealthy. The Europeans are particularly subjed to the terrible difeafe called the black vomit, which fweeps off multitudes annually on the arrival of the galleons. It feldom continues above three or four days, in which time the patient is either dead or out of danger, and if he recovers, is never subject to a return of the same distemper. This disease has hitherto foiled all the arts of the Spanish styficians, as has also the leproly, which is very common here. At Carthagena, likewife, that painful tumour in the legs, occasioned by the entrance of the discurrentus, or guiaca-worm, is very common and troublefome. Another diferder, peculiar to this country and to Peru, is occasioned by a little infect called nigua, to extremely minute, as france to be visible to the naked eye. This infect breeds in the dult, infimutes itself into the loles of the feet and the legs, piercing the fkin with fuch labelety, that there is no being more of it, before it has made its way to the fleth. If it I perceived in the beginning, it is extracted with little pain; but having once lodged its head, and pierced the ain, the patient must undergo the pain of an tacdien, without which a nodus would be formed, and a mulimude of miects. engendered, which would foon overspread the foot and leg. One species of the nigua is venomous, and when it enters the toe, an inflammatory fivelling takes place in the groun.

St. MARTHA.

St. Manha is bounded on the north, by the North fea; on the cast, by Rio de la Hache; on the south, by New-Granada; and on the west, by Carthagena. It is three hundred milesin length, and two hundred in breadth, is a mountainous country, and the land very high. Here begins the famous ridge of mountains called the Cordilleras des los Andes, which run from north to fouth the whole length of the continent of South-America; it is extremely hot on the fea coaft, but cold in the internal parts, on account of the mountains; it abounds with the fruits proper to the climate, and there are mines of gold and precious stones, as also salt-works. The Spaniards pollels but one part of this province, in which they have built Martha the capital. The air about the town is wholelome, and is feated near the fea, having a harbour furrounced with high mountains. It was formerly very confiderable when the galleons were fent thither, but is now come almost to nothing. West longitude 74° 11', north latitude 11º 20%

VENEZUELA.

The province contiguous to St. Martha on the east was first vilited by Alonso de Ojeda, in the year 1409; and the Spaniards, on their landing there, having obterved some huts in an Indian village built upon piles, in order to raife them above the stagnated water which covered the plain, were led to bestow upon it the name of Venezuela, or Little-Venice, by their usual propensity to find a resemblance between what they discovered in America, and the objects which were familiar to them in Europe. They made tome attempts to tettle there, but with little friccels. The final reduction of the province was accomplished by means very different from those to which Spain was indebted for its other acquisitions in the New World. The ambition of Charles V. often engaged him in operations of such variety and extent, that his revenues were not fufficient to defray the expense of carrying them into execution. Among other expedients for impriving the deficiency of his funds, he had borrowed large fums from the Vellers of Augiburgh, the most opulent merenants at that time in Europe. By way of retribution for thele, . to in hopes perhaps, of obtaining a new loan, he beltowed upon

then the province of Venezuela, to be held as an hereditary lef from the crown of Castile, on condition that within a limited time they should render themselves masters of the country, and establish a colony there. Under the direction of fuch performs, it might have been expected, that a fettlement would have been established on maxims very different from the of the Spaniards, and better calculated to encourage he useful industry, as mercantile proprietors might have limin to be the most certain source of prosperity and opulene: but unfortunately they committed the execution of their plen to some of those soldiers of fortune with which Gemany abounded in the fixteenth century. These adventurers, impetient to amass riches, that they might speedily abaden a station which they soon discovered to be very untemfortable, instead of planting a colony in order to cultivate and improve the country, wandering from diffrict to diffed in fearch of mines, plundering the natives with unfeeling rapacity, or oppressing them by the imposition of intolerible tasks. In the course of a few years, their avarice and existions, in comparison with which those of the Spaniards were moderate, defolated the province fo completely, that it could hardly afford them subsistence; and the Velsers relinquifted a property from which the inconfiderate conduct of their seents left them no hope of ever deriving any advantage.* When the wretched remainder of the Germans deferted Veneands, the Spaniards again took possession of it : but notwithflanding many natural advantages, it is one of their most languishing and unproductive settlements,

PARIA AND COMANA.

9000 C/J =

These provinces are bounded on the north by the North fea, on the cast by Surinam, on the west by New-Granada, and on the fouth by Guiana; its produce is various, but in relating the origin and operations of the mercantile company, in which an exclusive right of trade with them has been velted, we shall hereafter have occasion to consider their state and productions in a more ample manner.

Civedo y Bagnos Hift. de Venezuela, p. 11, &c.

form of a Span

NEW-GRANADA AND POPAYAN,

The provinces fometimes known as the new kingdom e Granada, is entirely an inland country of great extent. The important addition was made to the dominions of Spain about the year 1536, by Sebastian de Benalcazar and Gonzalo Ximene de Quesada, two of the bravest and most accomplished offices employed in the conquest of America. The former, who con manded at that time in Quito, attacked it from the fouth; the latter made his invation from Santa Martha on the none As the original int region were farther advanced in improvement America but the Mexican and Peruvians, mselves with great resolution and good conduc nd perseverance of Benalcaur and Quesada su ofition, though not without encountering mans reduced the country into the

fa. ated above the level of the fea-The provinces that though they approach almost to the equator, the climate is remarkably temperate. The fertility of the vallies is not inferior to those of the richest districts in America, and the higher grounds yield gold and precious stones of various kinds. It is not by digging into the bowels of the earth that this gold is found, it is mingled with the foil near the furface, and feparated from it by repeated washing with water: this operation is carried on wholly by negro flaves; for though the chill fubterranean air has been discovered, by experience, to be to fatal to them, that they cannot be employed with advantage in the deep filver mines, they are more capable of performing the other species of labour than Indians. As the natives are exempt from that fervice, which has wasted their race so rapidly in other parts of America, the country is still remarkably populous. Some diffricts yield gold with a profusion no less wondersul than in the vale of Cineguilla, and it is often found in large pepitas, or grains, which manifest the abundance in which it is produced. On a rifing ground near Pamplona, fingle labourers have collected in a day what was equal in value to a thouland pelos. A late governor of Santa Fe brought with him to Spain a lump of pure gold, estimated to be worth seven hundred and forty pounds fterling. This, which is perhaps the largest and fineit specimen ever found in the new world, is now deposites in the royal cabinet of Madrid. But without founding and calculation on what is rare and extraordinary, the value 4.

is the east is little known, and imperfectly occupied by paniards.

(i36)

HISTORY OF

PERU.

PERU is fituated between the equator and 25° fouth latitude and 60° and 81' west longitude;* its length is eighteen hun dred miles, and its breadth, according to some authors, three hundred and ninety, and others fix hundred + miles; but the latest and most authentic accounts state it at about five hundred It is bounded on the north by Terra Firma, on the west by the Pacific Ocean, on the South by Chili, and on the cal by the mountains called the Andes. The bounds of ou work will not permit us to enter into the ancient history q this country before its conquest by the Spaniards; we can therefore, only in brief observe, that the empire of Peru, a the time it was subdued, extended along the South sea, from the river of Emeralds to Chili, and on the land fide to Popayan according to some geographers. It contained within its ex tent that famous chain of mountains which rifes in the Terr Magellanica, and is gradually loft in Mexico, in order to unite, as it should seem, the southern parts of America with the northern.

It is now divided into three grand divisions or audiences
1. QUITO: 2. LIMA, or Los REYES; and, 3. Los CHARCOS
As to its climate, mines, soil and produce, they differ greatly
in different parts of the country.

QUITO.

The extensive province of Quito is bounded on the north by Popayan, and includes a part of that government; also by

The compilers of the Encyclopædia Britannica thate the fituation of Penbetween 1 deg. 40 min. north, and 26 deg. 10 min. fouth latitude, and 56 and 81 deg. weft longitude, and make its length eighteen hundred, and its breadth as above, three hundred and ninety miles.

⁺ Guthrie.

Jun Fé de Bogots; on the fouth by the governments of Piura and Chachapoyas; on the east it extends over the whole goterement of Maynas and the river of the Amazons to the metion, which divides the Spanish from the Portuguese domialens; and on the well it is bounded by the South fea; turnding, according to Antonio de Ulloa, fix hundred leagues is leagth, and about two hundred in its greatest breadth; but his greatly exceeds the computation of all other geographers. He however observes, that it must be owned a great part of that vali dominions are either inhabited by nations of Indians, or have not hitherto been fufficiently peopled by the Spaniards, if indeed they had been thoroughly known; and that all the purts that can properly be faid to be peopled, and actually fubthe to the Spanish government, are those intercepted by the two Cordilleras of the Andes, which, in comparison to the extent of the country, may be termed a firest or lane, fifteen legies, or fametimes more, from east to well; to this mast be and several detached governments, separated by the very extentive tracts inhabited by free Indians.

The climate of Quito differs from all others in the same parild, fince even in the center of the forrid zone, or although meer the equinoctial, the heat is not only very tolerable, but een in some places the cold is painful; while others enjoy all the advantages of a perpetual tpring, the fields being constantly towered with verdure, and enamelled with flowers of the most evely colours. The mildness of the climate, free from the extremes of heat and cold, and the constant equality of the ay and night, render this country, which, from its firuation, might be thought to be parched by the constant heat of the and scarcely inhabitable, both pleasant and fertile; for Nature has here dispensed her bleffings with so liberal a hand, that this country in leveral respects surpasses those of the temposte zones, where the viciffitudes of winter and fummer, and the change from heat to cold, cause the extremes of both to be more fensibly felt. However, in different parts of the country, the air is very different; in one part are mountains of a flusendous height and magnitude, with their fummits covered web loow. The plains are temperate, the valleys hot, and, secording to the high or low fituation of the country, are found the variety of gradations in temperature possible to be consaved between the extremes of heat and cold.

Quito, the capital, in oo 13' fouth latitude, and 77° 50'

the chinate, foil, and aspect of this ent to render it the most enviable of posed to be the most elevated, if, which inhabitants were not harassed continual danger: for here tremendalightning prevail, which are sufficier whilst earthquakes sequently spreamd sometimes bury cities in ruins.

The distinction of winter and si minute difference; the interval betw ber and those of April, May or June feation, and the other months comp former feafon the rain chiefly prevail: habitants frequently enjoy whole d whenever the rains are discontinued inhabitants are in the utmost constern are offered up for their return. On t continue a short time without intern vail, and the churches are again crow obtain fine weather; for a long dre difeafes, and a continual rain, with destroys the fruits of the earth. The enjoys one peculiar advantage in being other troublesome insects, such as she except the nigua or plane soldiel. I

Leives begin to change their colour, fresh leaves blossom, and from are seen in their proper gradation, in fize and ripeness on she time tree. The fame incellant fertility is confpicuous in the torn, both reaping and fowing being carried on at the we time; fo that the declivities of the neighbouring hills cabbit all the beauties of the four feafons in one affemblage, Lough all this is generally feen, yet there is a fettled time for the grand harvast ; yet sometimes the most favourable season for flwing in one place is a month or two after that of another, shough their dittance does not exceed three or four leagues, Thus in different spots, and sometimes in one and the same, fixing and reaping are performed throughout the whole year, the forwardness or retardment naturally arising from the diffirm atuations, fuch as mountains, rising grounds, plains and ralleys; and the temperature being different in each, the but times for performing the feveral operations of hulbandry muft also differ,

The chirimoya is confidered as one of the most delicious fres in the world; its dimensions are various, being from one to five inches in diameter; its figure is imperfectly round, fatted towards the falk, where it forms a kind of navel, but all the other parts are nearly circular : it is covered with a thin for thell, which adheres to closely to the pulp as not to be separated from it without a knife; the outward coat is green, vinegated with prominent veins, forming all over it a kind of net-work : the pulp is white, and contains a large quantity of Juce relembling honey, of a fweet talle, mixed with a gentle and of a most exquisite slavour, The feeds are formed in eversl parts of the pulp, and are fomewhat flat. The tree is high and tufted, the ftem large and round, but with fome requilities, full of elliptic leaves, terminating in a point. The blottom differs little from the colour of the leaves, which is a darkish green; and though far from being beautiful, is renurkable for its incomparable fragrance,

The granadilla in its shape relembles an hen's egg, but is larger; the outfide of the shell is smooth, glosfy, and of a funt carnation colour, and the infide white and foft; the shell tontains a viscous liquid substance full of very small and delirate grains, lefs hard than those of the pomegranate. This sedullary fubflance is separated from the shell by a fine and tansparent membrane, Its fruit has a delightful fweeiness besided with ecidity, very cordial and refreshing, and so wholelame, that there is no danger of eating to excels.

pumber of daughters, without one women enjoy a better state of hea may be owing in some measure to particularly to the early intemperan the other sex.

has may be faid to toil and scheme to lay up wealth, to enable feir seccessors to lavish honours upon a body insenable of all agentry.

. The commerce of the province of Quito is chiefly carried by Europeans lettled nere, and others who occasionally mire. The manufactures of this province are only cottons. white and striped baize, and cloths, which meet with market at Lima, for supplying the inward provinces then. The returns are made partly in filver, and partly in ages made of gold and filver thread, and wine, brandy, oil, supper, tin, lead, and quickfilver. On the arrival of the pileons at Carthagena, these traders refort thither to purchase European goods, which, at their return, they confign to their correspondents all over the province. The coasts of New-Spin supply this province with indigo, of which there is a very large confumption at the manufactures, blue being univerfilly the colour which this people adopt for their apparel. They also import, by way of Guayaquila, iron and steel, both from Europe and the coast of Guatimala.

The disposition of the Indians in the province of Quito is esteemely remarkable, and they appear to have no resemblance to the people found there by those who first discovered the Country. They at present possess a tranquility not to be disturbed either by fortunate or unfortunate events. In their mean appared they are as contented as a prince clothed in the possible splendid robes. They show the same disregard to riches; and even the authority and grandeur within their reach is so little the object of their ambition, that to all appearances it seems to be the same to an Indian whether he be created an staide, or obliged to person the office of a common executions.

Men to work. Whatever, therefore, is necessary to be done, what to the Indian women, who are much more active; they is and make the half shirts and drawers which form the only travel of their husbands; they cook the provisions, grind travel, and brew the beer called chicha, while the husband sits tenting on his hams, the asual posture of the Indians, looking at his busy wite. The only domestic service they do is to sough their little spot of land, which is sowed by the wife. Then they are once seated on their names, no reward can induce them to stir; so that if a traveller has both his way, and happens to succe to one of their cottages, they charge their wives to say that they are not at home. Should the passenger alight and

married, and Indian young men before contract matrimony, are never guilty, of maxim among them, that drunkenness is but masters of families, who; when they; of themselves, have others to take care of

The women present the chicha to t bashes, till rheir spirits are raised, then and tabor, while others dance. Some of the Indian women sing songs in their own who do not dance, squat down in the usual to their turn. When tired with intemp down together, without regarding whethe wife of another or their own sister or day vitiles sometimes continue three or four decoming among them, throws away all the clathe Indians, lest they should procure more.

Their funerals are likewise solemnized wing. The house is filled with jugs of the of the mourners and other visitors; the latt the streets, and invite all of their nation by, to come in and drink to the honor This ceremony lasts four or five days of them.

which they confider as a certain indication of her personal ntions. After a young man has made choice of a woman, wilk her of her father, and having obtained his confent, they bein to collabit together as man and wife, and affift the fatherlaw in cultivating the land. At the end of three or four what, and frequently of a year, the husband leaves his bride wile, without any ceremony, and perhaps expollulates with his fither-in-law for endeavouring to deceive him, by impoling upon him his daughter, whom nobody elie had thought worthy if mking a bedfellow. But if no difgust arises in the man on fins account, or any other, after passing three or four months in this commerce, which they call amanarle, or to habituate one's tal, they then marry. This cuftom is still very common, though the whole body of the clergy have used all their endersons to put a flop to it. Accordingly they always thillre them of that fin before they give them the nuptial bentdiction.

It has been observed, that the dependencies of the jurisdictions of Quito are seated between the two Cordilleras of the Andes, and that the air is more or less cold, and the ground more or less sterile, according to the height of the mountains. Tacks barren tracks are called defarts; for though all the Cordileras are dry, some are much more so than others, and the tentinual snow and frosts render some parts of them incapable of producing a single plant, and consequently they are uninhabitable by man or beast.

Some of these mountains, which appear to have their bases thing on other mountains, rise to a most astonishing height, the teaching far above the clouds, are here, although in the most of the torrid zone, covered with perpetual snow. From teperiments made with a barometer on the mountain of Cotopun, it appeared that its summit was elevated six thousand two handred and sifty-two yards above the surface of the sea, something above three geographical miles, which greatly exceeds the bright of any other mountains in the known world,

Cotopasi became a volcano about the time when the Spiniards for arrived in this country. A new eruption happened in 1223, which had been for some days preceded by a continual perfor rumbling noise; after which an aperture was made in a summit, as also three others near the middle of its declivity; these parts, when the eruption commenced, were buried under midgleous milles of snow. The ignited substances which were perfected, being mingled with a considerable quantity of snow and

GENERAL DESCRIPTION

ice, melting amidst the flames, were carried down with amazing rapidity, that the plain from Callo to Latacung everslowed, and all the houses, with their wretched inhab were swept away in one general and inflantaneous deltra The river of Latacunga was the receptacle of this de good, till becoming fwollen above its banks, the torrent over the adjacent country, continuing to fweep away houf cattle, and rendered the land near the town of the fune as the river, one vast lake. Here, however, the inhabitan inflicient warning to fave their lives by flight, and retres a more clevated at ome listance. During three day volcano ejected . torrents of lava with melu and Inow, pour des of the mountain. The t on continued for longer, accompanied with to Toatings of the through the eraters which been opened. Lan as quiet, and neither fmok fire were to be feer, until May, 1744, the flames for paffage through feveral other irts on the fides of the mou is that in clear nights the frame, being reflected by the tr rent ice, exhibited a very grand and beautiful illumination. the 13th of November following, it ejected fuch pred quantities of fire and lava, that an inundation, equal to the mer, foon enfued, and the inhabitants of the town of Lata for some time gave themselves over for loft.

The most fouthern mountains of the Cordillers is t Mecas or Sangay, which is of a prodigious height, and t greatest part of it covered with snow; yet from its summit a continual sire, attended with explosions which are p heard at forty leagues distance. The country adjacent to volcino is entirely barren, being covered with cinders e from its mouth. In this mountain rises the river Sangay, being joined by the Upano, forms the Payra, a large river discharges itself into the Maranon.

Pichinchi, though famous for its great height, is one the two hundred and teventy-eight yards lower than the perpediar height of Cotopaxi, and was formerly a volcano, be mouth or crater on one of its fides is now covered with fan calcined matter, to that at prefent neither (moke nor fire from it. When Don George Juan and Don Actomo dewere feationed on it for the purpose of making astronomic fervations, they found the cold on the top of this mountainmely intente, the wind violent, and they were frequenced in to thick a fog, or, in other words, a cloud

on shirt at fix or eight paces diffance was fearcely differnible. The in grew clear by the clouds moving nearer to the earth, and on all fides furrounding the mountain to a valt diffance, regretenting the few with the mountain standing like an island in When this happened, they heard the dreadful noise of the tempel's that discharged themselves on Quito and the Michouring country. They faw the lightning iffue from the deds, and heard the thunder roll far beneath them. While waver parts were involved in tempelts of thunder and rain, my moved a delightful ferenity; the wind was absted, the by their, and the enlivening rays of the fun moderated the freely of the cold. But when the clouds role, their thickness rescued respiration difficult; snow and hail fell continually, in the wind returned with all its violence, fo that it was impublic entirely to overcome the fear of being, together with they but, blown down the precipice on whose edge it was built, a of being buried in it by the constant accumulations of ice and how. Their fears were likewise increased by the fall of enormous fragments of rocks. Though the smallest crevice visible in their hut was stopped, the wind was so piercing that it peneinted through; and though the hut was fmall, crowded with inhibitints, and had feveral lamps conflantly burning, the cold was to great, that each individual was obliged to have a chafingth of coals, and feveral men were conflantly employed every soming to remove the fnow which fell in the night. By the ferences of fuch a climate their feet were twelled, and to tender, that walking was attended with extreme pain, their hands covered with childrains, and their lips to fwelled and chopt, that retty motion in speaking drew blood,

LIMA, OR LOS REYES.

The next divition of Peru is the audience of Lima, which is bounded on the north by Quito; on the caff, by the Cordilleras the Andes; on the fouth, by the audience of Los Charcos; and on the west, by the Pacific ocean; it being about leven to deed and seventy miles in length from north to fouth, but of a unequal breadth.

The climate and foil of this country is uncommonly various; in some places it is exceedingly hot, in others insupportably me, and in the city of Lima, where rain never falls, it is says temperate. The seasons vary within the compass of a

-- which nit the atmosphere duri and the fun, to the great joy of the inh and the country then begins to revive, w of his rays, had continued in a state of ceeded by fummer, which, though hot direction of the fun's rays, is far from b heat, which, indeed, would otherwise b derated by the fouth winds, which alwa though with no great force. Winter bes June or the beginning of July, and cont December, when the south wind begin to produce a certain degree of cold, not in the countries where the ice and fnow that the light dreffes are laid by, and clo worn. During the winter the earth is a fog, as totally to intercept the rays winds, by blowing under the shelter of particles they contracted in the frozen zor the vapours dissolve into a very small deequally moistens the earth; by which me during the other parts of the year offer n rocks and wastes, are clothed with verdi flowers of the most beautiful colours. in such quantities as to impair the roads veller; a very thin fluff will not foon ! milest spinnand tempests of thunder and lightning are as frement as at Quito,

aliket shough the capital is freed from the terror of these thought, it is subject to what is much more dreadful. Earthmi happen here to frequently, that the inhabitants are r: sontinual apprehensions of their being, from their sudmanufa and violence, buried in the ruins of their own houses; thele earthquakes, though so sudden, have their presages, smaf the principal of which is a rumbling noise in the bowels af the earth, about a minute before the shocks are felt, that Jeens to pervade all the adjacent subterraneous part; this is followed by difinal howlings of the dogs, who seem to presage the approaching danger. The beafts of burden passing the freets ftop, and by a natural instinct spread open their legs, the better to secure themselves from falling. On these portents the terrified inhabitants fly from their houses into the streets with such precipitation, that if it happens in the night, they in suppear quite maked; the urgency of the danger at once banishing all sense of delicacy or shame. Thus the streets exhibit is such odd and fingular figures as might afford matter of diversion, were it possible to be diverted in so terrible a moment. This infinden concourse is accompanied with the cries of children saking out of their sleep, blended with the lamentations of women, whose agonising prayers to the saints increase arthe common fear and confusion. The men are also too much Affected to refrain from giving vent to their terror, so that the whole city exhibits a dreadful scene of consternation and ... horror,

.. The earthquakes that have happened at the capital are very mmerous. The first fince the establishment of the Spaniards mas in 1582, but the damage was much lets confiderable than in ki, some of the succeeding. Six years after, Lima was again visited , by another earthquake, so dreadful that it is still solemnly commein monted every year. In 1609 another happened, which overturnmany houses. On the 27th of November, 1630, such prodious damage was done in the city by an earthquake, that in inowledgement of its not having been entirely demolished, fellival on that day is annually celebrated. Twenty-four after, on the 3d of November, the most stately edifices the city, and a great number of houses, were destroyed by parthquake, but the inhabitunts retiring, few of them perifh-Another dreadful one happened in 1678; but one of the per terrible was on the 28th of October, 1687. It began at in the morning, and destroyed many of the finest publi-

buildings nd houses, in which a great number of the tants peanhed; but this was little more than a prelude followed, for two hours after the shock returned w impetuous concussions, that all was laid in ruins, and bitants felt themselves happy in being only spectator general devastation, by having faved their lives, thou the loss of all their property. During this second shales retiring considerably, and then returning in mou waves, er tirely overwhelmed Callao, which is at fi distance from Lima, and all the adjacent country, togeth the milerat rom that time, fix eart have happe ious to that of 1746. was on the 2km t half an hour after ten a when the co with fuch violence, that more than ne greatest part, if not buildings ! troyed, burying under the thole inh t made fusficient hafte i Arcets and places of fafety. At len , JIKO, C horrid effects of the nric ir bek cealed, but the tra was of short duration, the concustions swiftly succeedi other. The fort of Callao also sunk into ruins; but fullered from the earthquake in its building was inconfi when compared to the dreadful cataltrophe which to for the fee, as is usual on such occasions, receding to fiderable distance, returned in mountainous waves, with the violence of the agitation, and luddenly buriet and the neighbouring country in its flood. This, he was not entirely effected by the field fwell of the war the fea retiring farther, returned with full greater impe and covered both the wells and other buildings of the so that what even had escaped the first inundation, was overwhelmed by those succeeding mountainous waves. ty three ships and vessels, great and finall, were then Embour, nineteen of which were fank, and the other among which was a frigate named St. Lermin, were can the force of the waves to a confiderable diffunce up the c This terrible inordation and earthquake extended to parts on the coaff, and feveral towns underwent the fa as the city of Lima, where the number of perfons who p within two days after it begin, amounted, according to : ares found, to one thousand three hundred, befides it en and wounded, many of whom lived only a facil to gmat forture.

The country of Lima enjoys great fertility, producing all inds of grain, and a prodigious variety of fruit. Here inastry and art supply that moisture which the clouds withhold. Because I Incas of Peru caused small canals to be formed, worder to conduct the waters of the rivers to every part of the country. The Spaniards, finding these useful works excited to their hands, had only to keep them in order, and by these are watered spacious fields of barley, large meadows, plantisms, vineyards and gardens, all yielding uncommon plenty. It is differs from Quito, where the fruits of the earth have no determined season, for here the harvest is gathered in, and the tree drop their leaves in the proper season.

Although the summer here is hor, yet venomous creatures are unknown; and the same may be said of the territory called Valles, though here are some ports, as Tumbez and Piura, where the heat is almost as great as that of Guayaquil. This singularity can therefore proceed from no other cause than the situral drought of the climate.

The audience of Lima is divided into four bishoprics. Truxib, Guamanga, Cusco and Arequipa. The diocese of Truxib ies to the north of the archiepiscopal diocese of Lima, and ike all the others is divided into several jurisdictions. The try of Truxillo is seated in 8° 6' south latitude, in a pleasant section, though in a sandy soil.

which the diocese of Guamanga is a rich quicksilver mine, from which the inhabitants of a neighbouring town procure their whole subsistence; the coldness of the air in that place checking the growth of all kinds of grain and fruit, so that they are obliged to purchase them from their neighbours. The quicksilver mines wrought here supply all the filver mines in Peru with that necessary mineral, and notwithstanding the proligious quantities already extracted, no diminution is perceived.

Cuico, which gives name to another discele, is the most section city in Peru, being of the tame date with the empire of the Incas, and was founded by them as the capital of the castre. On the mountain contiguous to the north part of the castre. On the mountain contiguous to the north part of the castre, whence it spears, that their design was to inclose the whole mountain with a prodigious wall of such construction as to remarked absolutely impracticable to an enemy, in order to all approach to the city. This will was entirely of and strongly built, some of the stones being of a to

magnitude. The city Culco is nearly equal to that Lima,

In this bishopric are several mines of gold and filver are extremely rich.

The fourth diocese of the audience of Lima is Area which contains the city of the same name, one of the la in all Peru: and it is delightfully feated in a plain, the he are well built of stone, and generally lofty, commodious, for decorated on the out-fide, and neatly furnished within. temperature of the air is extremely agreeable, the cold i never excellive, nor troublefome, fo that the ! are always clothed with e, and enamelled with flow as in a perpetual thefe advantages are allaye its being frequently dreadful earthquakes, for thefe convultions of r nas been four times laid in ri The city is, however populous, and among its in tants are many noble ! the street sale.

In this bithopric are teveral gold and filver mines, an fome parts are large vineyards, from which confiderable of tities of wine and brandy are made. Among the other protions is Guinea pepper, in which the jurifdiction of Africathis diocefe carries on a very advantageous trade, the and produce of these plantations bringing in no less than sethousand dollars per annum. The pods of this pepper about a quarter of a yard in length, and when gathered dried in the sun and packed up in bags of rushes, each containing an aroba or a quarter of a hundred weight, and to they are exported to all parts. Other places of this jurished are samous for vast quantities of large and excellent olives, exceeding the finest produced in Europe, they being not the fize of a hen's egg.

LOS CHARCOS.

The audience of Charcos, the last division of Peru, is ec in extent to that of Lima, but many of its parts are not well inhabited, some being full of vast deserts and impenetra forests, while others have extensive plains intercepted by suppendous height of the Cordilleras: the country is inhabit only in such parts as are free from those inconveniences. I bounded on the north by the diocete of Cusco, and read fouthward to Buones Ayres: on the east it extends to Bra and on the west it reposes to the Pacific ocean, particularly Atacama. The remainder of the province borders on the kindom of Chili.

h, This audience is divided into the archbishopric of Plata and five bishoprics: We shall begin with the former.

The famous mountain of Potofi is known all over the commercial world for the immense quantity of filter ... are propared: The discovery of this amazing treature happened at the prime treatment of the year 1545, by a more accident, which would mention afterwards. At a small distance from it me the the medicinal baths, called Don Diego, whither some resection health, and others for diversion.

7. At the time when the first conquests were made, when emigitions were most frequent, the country of the Incas had a strict greater reputation for riches than New-Spain, and, in reality, for a long time much more considerable treatures were brought away from it. The define of partaking of them must necessarily draw thither, as was really the case, a greater number of Castilians. Though almost all of them went over thouser with the hope of returning to their country to enjoy the fortune they might acquire, yet the majority settled in the colony. They were induced to this by the softness of the climate, the shibitty of the air, and the goodness of the provisions. Mexico presented not the same advantages, and did not give them realizate expect so much independence as a land infinitely more likibite from the mother country.

The Culto attracted the conquerors in multitudes: they found the capital built on a ground that was very irregular, and divia into as many quarters as there were provinces in the em-Each of the inhabitants might follow the utiges of his thitive country, but every body was obliged to conform to the Worthip established by the founder of the monarchy. There was no edifice that had any grandeur, elegance or convenience, because the people were ignorant of the first elements of architesture. The magnificence of what they ed the "palace of the fovereign, of the princes of the blood, and of the great of his empire," confisted in the profusion of the metals were lavished in decorating them. The temple of the Sun diffinguished above all other edifices; its walls were inwhiled or sheathed with gold and silver, ornamented with divers and loaded with the idols of all the nations whom the ipies had enlightened and subdued.

As it was not a folicitude for their own prefervation which desipted the Spaniards at first, they had no sooner pillaged the matter riches which had been amassed at Cusco for four century and the second se

from the extremity of their country, bec little. Paita, Truxillo, Callao, Pisca and which the Spaniards deemed most convensication they intended to establish among the mother country. The different position determined the degree of their prosperity.

Those which were afterwards built in the country were: erected in regions which precopious harvests, excellent pastures, a mild mate, and all the conveniences of life. T. had hitherto been fo well cultivated by a nun ing people, were now totally difregueded. hibited only a deplorable picture of a horri wildness must have been more melancholy an dreary aspect of the earth before the origin traveller, who was led by accident or curiofit late plains, could not forbear abhorring t bloody authors of fuch devastations, while he was not owing even to the cruel illusions of fanaticism of conquest, but to the stupid a gold, that they had facrificed fo much more fo numerous a population.

This infatiable thirst of gold, which neith fiftence, fafety nor policy were all

with the liquors or with the food of the people they had tabdued. They imported vines from the old world, which foon multiplied fufficiently in the fands of the coasts at Ica, Pifca, Malea, Moqueque, and Truxillo, to furnish the colony with the sine and brandy it wanted. Olives succeeded still better, and yielded a great abundance of oil, which was much superior to that of the mother country. Other fruits were transplanted with the same success. Sugar succeeds so well, that none of any other growth can be compared to that which is cultivated in thase parts, where it never rains. In the inland country wheat and barley were sown; and at length all the European quadrupeds were soon found grazing at the foot of the mountains.

This was a confiderable step, but there still remained much more to be done. After they had provided for a better and a puter choice of subsistence, the next care of the Spaniards was to have a dress more commodious and more agreeable than that of the Peruvians. These were, however, better clothed than any other American nation. They owed this superiority to the advantage which they alone possessed, of having the lama and pacos, domestic animals, which served them for this use.

After the conquest, all the Indians were obliged to wear clothes. As the oppression under which they groaned did not allow them to exercise their former industry, they contented themselves with the coarser cloths of Europe, for which they were made to pay an exorbitant price. When the gold and silver which had escaped the rapacity of the conquerors were tabusted, they thought of re-establishing their national manufactures. These were some time after prohibited, on account of the desciency which they occasioned in the exports of the mother country. The impossibility which the Peruvians sound of purchasing foreign stuffs, and paying their takes, occasioned permission to be given at the end of ten years for their re-establishment. They have not been discontinued since that time, and have been brought to as great a degree of perfection as it

With the wool of the vicuna, a species of wild pacos, they make, at Cusco and its territory, stockings, handkerchiefs and tears. These manufactures would have been multiplied, if the spirit of destruction had not fallen on animals as well as on men. The same wool, mixed with that of the sheep imported

draffelt located to

thither from Europe, which have exceedingly degenerated, ferves for curpets, and makes also tolerably fine cloth. Pleece of inferior quality are employed in ferges, druggets, and in all kinds of coarse stuffs.

The manufactures subservient to luxury are established a Arcquips, Cuico and Lima, In thefe three towns is mide prodigious number of gold toys and plate, for the use of private persons, and also for the churches. All these manufactures are but coarlely wrought, and mixed with a great deal of comper. We feldom discover more taste in their gold and silver lacen and embroideries, manufactures also produce. regard to their lace, which, This is not altogether looks very beautiful. This while maked with tha he hands of the nuns, who half manufacture is common I the young meltees of the employ in a the Peruvian towns, who for the most ore marriage, pals fome years in the convent.

Other hands are e ed in painting and gilding leather for reast, in making with wood and ivory pieces of inlaid work and accure, and in drawing figures on the marble that is found at Cucuca, or on linen imported from Europe. These differentworks, which are almost all manufactured at Cusco, serve for ornaments for houses, palaces and temples; the drawing of them is not bad, but the colours are neither exact non permanent. If the Indians, who invent nothing, but are excellent imitations, had able masters and excellent models, they would at least make good copysits. At the close of the last century, some works of a Peruvian painter, named Michael de St. Jacques, were brought to Rome, and the connocitous discovered marks of grams in them.

Though the Peruviens were unacquainted with coin, they knew the ate of gold and filver, for they employed them in different kinds of aranments. Independent of what the torrents and accident produced them of these metals, fome mines had been opened of lattle depth. The Spinnards have not translatited to us the manner in which there inch productions were drawn from the beiom of the curb. Their pride, which has deprived us of to much uteful knowledge, undoubtedly made the high, that, in the inventors of a people whem they called by parents, there was nothing that was weathy to be recorded.

The difference as to the manner in which the Peruviant ked their mines, did not extend to the mines themselves.

onguerous council them on all fields. At first the gold

minum tempted the averice of the greater number. Fatal exparisates discouraged those whom passion had not blinded: they
clindy faw, that, for some enormous fortunes raised in this
manner, great numbers who had only moderate fortunes, were
teasly initiated. These mines sunk into such discredit, that, in
each to prevent them from being abandoned, the government
wasphiged to take the twentieth part of their produce, instead
of the fifth, which it at first received.

The mines of filver were more common, more equal, and richer. They even produced filver of a fingular species, rarely found elsewhere. Towards the sea-coast great lumps of this metal are found in the sands.

There are a great number of other mines which are infinitely more important, and are found in the rocks and on the mountains. Several of them gave false hopes; such, in particular, was that of Ucuntaya, discovered in 1713: this was only an incression of almost massly silver, which at first yielded several millions, but was soon exhausted.

Others which were deeper have been alike deserted: their produce, though equal to what it was originally, was not sufficient to support the expense of working them, which augmented every day. The mines of Quito, Cusco and Arequip, have experienced that revolution which awaits many of the rest.

: There are greater numbers of very rich mines which the waters have invaded. The disposition of the ground, which somethe fummit of the Cordilleras goes continually shelving to the South sea, must necessarily render these events more common at Peru than in other places. This inconvenience, which with greater care and skill might often have been prevented or diminished, has been in some instances remedied.

Joseph Salcedo, about the year 1660, had discovered, not far from the town of Puna, the mine of Laycacota: it was so the first they often cut the filver with a chizel. Prosperity had so elevated the mind of the proprietor, that he permitted the Spaniards, who came to seek their fortune in this part the new world, to work some days on their own account, whom weighing or taking any account of the presents he had them. This generosity drew around him an infinite table, and the love of money made them quarrel with each ther, and the love of money made them take up arms and fall them one another; and their benefactor, who had neglected no appelient to prevent and extinguish their sanguinary conten

tions was hanged as being the author of them. Whill he in prison, the water got possession of his mine. Superstit from made it imagined, that this was a punishment for horrid ast they perpetrated against him. This idea of Div vengeance was revered for a long time; but at list, in 17. Diego de Bachna affociated with other opulent people to aver the springs which had deluged so much treasure. The laboration which this difficult undertaking required were not simisfied a 1754. The mine yields as much now as it did at first. I mines still richer than this have been discovered; such, example, is that of him was found in the same control of Porco.

An Indian, n 1545, pursuing some deer, order to climb certain neep tocks laid hold of a buff, the re rth, and brought to view of which loofened from the d recourse to it for his or ingot of filver. The Indian uie, and never failed to return to his treasure every time to his wants or his defires folicited him to it. The change the happened in his fortune was remarked by one of his country men, and he discovered to him the secret. The two frien could not keep their council and enjoy their good fortun they quarrelled; on which the indicrect confident dife vered the whole to his master, Villaroell, a Spaniard who w fettled in the neighbourhood. Upon this the mine becar known, and was worked, and a great number of them we found in its vicinity; the principal of which are in t morthern part of the mountain, and their direction is for north to fouth. The most intelligent people of Peru har observed, that this is in general the direction of the rich mines.

The fame of what was passing at Potosi soon spread abroa and there was quickly built at the foot of the mountain town consisting of fixty thousand Indians and ten thousan Spaniards. The steribity of the soil did not prevent its bein immediately peopled. Corn, fruit, slocks, American stuff European luxuries, arrived there from every quarter. Industry, which every where follows the current money, could be search for it with so much success as at its source. It evidently appeared, that in 1738 their mines produced annual near nine hundred and seventy-eight shousand pounds, without reckoning the silver which was not registered, and what his been carried off by fraud. From that time the produce his been to much diminished, that no more than one eighth part the coin which was formerly struck is now made.

At the mines of Potoli, and all the mines of South-America, the Somiards, in purifying their gold and filver, use mercury, with which they are happlied from Guanca Velica. The extense opinion is, that this mine was discovered in 13642 like trade of mercury was then still free; it became an exclusive trade in 1371; at this period all the mines of mercury were that, and that of Guanca Velica alone was worked, the property of which the king referred to himself. It is not found to diminish. This mine is dug in a prodigiously large montain, fixty leagues from Lima. In its profound abyls are from fixets, squares, and a chapel, where the mysteries of religion on all sessions are ecceptated; millions of flambeaux are continually kept to enlighten it.

Fixed people, at their own expense, work the mine of Gunta Vehea. They are obliged to deliver to government, at slipulated price, all the mercury they extract from it.

It was not they have procured the quantity which the demands one year require, the work is suspended. Part of the mercury is sold on the spot, and the rest is sent to the royal magazines throughout all Peru, from whence it is delivered out at the same price it is sold in Mexico. This arrangement, which has occasioned many of the mines to drop, and prevented others from being opened, is inexcusable in the Spanish system; the court of Madrid, in this respect, merits the same represents as a ministry in other countries would incur, that would be blind enough to lay a duty on the implements of agriculture.

The mine of Guanca Velica generally affects those who work in it with convulsions: this and the other mines, which are not less unhealthy, are all worked by the Peruvians. These information victims of an insatiable avarice are crowded all lighter and plunged naked into these abysses, the greatest proof which are deep, and all excessively cold. Tyranny in invented this resinement in cruelty, to render it impossible from thing to escape its restless vigilance. If there are any writtens who long survive such barbatity, it is the use of continuous that preserves them.

In the Cordilleras, near the city of Paz, is a mountain of remriable height, called Illimani, which doubtless contains mente riches; for a crag of it being fome years ago severed by a Rash of lightning, and falling on a neighbouring mountain such a quantity of gold was found in the fragments, that for some time that metal was sold at Paz for eight pieces of eight per ounce; but its summit being perpetually covered.

HILL is fituated between 25° and 45° fouth latitude, and 55° and 85° west longitude; its length is one thousand two hundred and fixty miles, and its greatest breadth five hundred aid eighty; it is bounded on the north, by Peru; on the east, y Paragua or La Plata; on the fouth, by Patagonia; and on the the, by the Pacific ocean. It lies on both fides of the Andes; Chili Proper lies on the west, and Cuyo or Cutio, on the east.

The principal towns in the former are St. Jago and Baldivia; in te latter, St. John de Frontiera.

The first attempt of the Spaniards upon this country was made Almagro in the year 1535, after he and Pizaro had completed econquest of Peru. He set out on his expedition to Chili a confiderable body of Spaniards and auxiliary Indians. For two hundred leagues he was well accommodated with every ***Estary by the Indians, who had been subjects of the Emperors Feru; but reaching the barren country of Charcos, his troops became discontented through the hardships they suffered, which demined Almagro to climb the mountains called Cordilleras, in order to get the sooner into Chili; being ignorant of the inblubble mines of Potosi, contained in the province of Charcos, where he then was. At that time the Cordilleras were covered flow, the depth of which obliged him to dig his way frough it. The cold made such an impression on his raked Line, that it is computed no less than ten thousand of them prihed on these dreadful mountains, one hundred and fifty with Spaniards sharing the same fate, while many of the surfirers loft their fingers and toes through the excess of cold. At ster encountering incredible difficulties, Almagro reached *fac, temperate, and fertile plain on the opposite side of the Contillers, where he was received with the greatest kindness the natives. These poor savages, taking the Spaniards for deputies of their god Virachoca, immediately collected I an offering of gold and filver, worth two hundred an thouland ducets; and foon after brought a prefent to worth three hundred thouland more. Thele offerings termined him to conquer the whole country as foon as The Indians, among whom he now was, had acknowled authority of the Peruvian Incas, or Emperors, and confe gave Almagro no trouble. He therefore marched imm against those who had never been conquered by the Pe

and inhabited the fouthern parts of Chili. These swage with great . in five mon they mall is little time, of a comm In 1540.

The squark writers up a that the neighbourh

ed eighty thousand inhabitants of a peaceable disposition, o were even fo tame as to fuffer Valdivia to parcel out ads among his followers, while they themselves remained e of inactivity. About fixteen leagues to the castward erial, the Spanish general laid the foundations of the city i Rica, so called on account of the rich gold mines he But his ambition and avarice had now involved lifficulties from which he could never be extricated: he ended his conquests beyond what his strength was capamaintaining. The Chilesians were still as desirous as ever vering their liberties. The horses, fire-arms, and armour Spaniards, indeed, appeared dreadful to them; but ts of endless slavery were still more so. In the course war they had discovered that the Spaniards were vulneramortal men like themselves; they hoped, therefore, by superiority in numbers, to be able to expel the tyrannipers. Had all the nations joined in this resolution, the ds had certainly been exterminated; but some of them a pacific disposition, while others considered servitude reatest of all possible calamities. Of this last opinion e Aracceans, the most intrepid people of Chili, and who en Valdivia the greatest trouble. They all rose to a man, see Capaulican, a renowned hero among them, for their

Valdivia, however, received notice of their revolt than they intended he should, and returned with all ion to the vale of Araccea; but before he arrived, fourruland of the Chilesians were there affembled under the ; of Capaulican; he attacked them with his cavalry, and them to retreat into the woods, but could not obtain a e victory, as they kept continually fallying out and g his men. At last Capaulican having observed, that with such a number of undisciplined troops, only served ribute to the defeat and confusion of the whole, divided les into bodies of one thousand each. These he directed k the enemy by turns, and though he did not expect fingle thousand would put them to flight, he directed make as long a stand as they could, when they were to eved and supported by another body, and thus the Spawould be at last wearied out and overcome. The event sowered his expectations. The Chilefians maintained a w leven or eight hours, till the Spaniards, growing faint at of refreshment, retired precipitately. Valdivia ordered

paly adopted up the nature of the climate, as well as to the in-

in the cliente of Chili is one of the most wholesome in the ala Iwould.: The vicinity of the Cordillarus gives it such a temperature so could not otherwise be expedied in that latitude. Though gold mines are found in it, their richnels he been too much extolled; their produce never exceeds two hundred and eighteen thousand seven hundred and fifty pounds per may The foil is prodigiously fertile. All the European mits have improved in that happy climate. The wine would pe excellent if pattite wete borberly affitted ph art; and the com basselt is reckened a had one when it does not wield a hundred fold. With all those advantages, Chili has no diseas interporte with Spain; their trade is confined to Peru, Parasad the lavages on their frontiers. With these last they grehange their less valuable commodities for oxen, horses, and their ener children, whom they are ready to part with for the mest triding things. This province supplies Peru with shat plenty of hides, dried fruit, copper, falt meat, horses, hempi lard, wheat, and gold; in exchange it receives tobacco, ther, cocoa, earthen ware, woollen cloth, linen, hats, made Muito, and every article of luxury brought from Europe. The thips fent from Callao on this traffic were formerly bend to Conception bay, but now come to Valparaifo. The merce between this province and Paraguay is carried on by though it is a journey of three hundred leagues, forty of which lie through the snows and precipices of the Cordilleras; if it was carried on by sea, they must either pass tho its of Magellan, or double cape Horn, which the Spaniards mays avoid as much as possible. To Paraguay are sent some ollen stuffs called ponchos, which are used for cloaks: b wines, brandy, oil, and chiefly gold; in return they rewax, a kind of tallow fit to make loap, European goods, egroes.

The latter has no authority except when a governor who which case he may appoint one in his room for a time, which case he may appoint one in his room for a time, their names a successor. If on some occasion the viceroy fered in the government of Chili, it was when he either authorised by a particular trust reposed in him court, or by the deference paid to the eminence of a or when he has been actuated by his own ambition

PARAGUAY, OR LA PLATA.

ARAGUAY is fituated between 12° and 37° fouth latitude, and 50° and 75° west longitude; its length is one thousand sive hundred miles, and its breadth one thousand. It is bounded on the north, by Amazonia; on the east, by Brasil; on the south, by Patagonia; and on the west, by Chili and Peru.

It is divided into fix provinces, viz. PARAGUAY, PARANA, Graffa, URAGUA, TUCUMAN, and RIO DE LA PLATA.

This country, besides an infinite number of small rivers, is watered by three principal ones, the Paragua, Uragua, and Parana, which, united near the sea, form the famous Rio de la Plata, or Plate river, and which annually overslow their lanks; and on their recess, leave them enriched with a slime, that produces the greatest plenty of whatever is committed to it.

This vast tract is far from being wholly subdued or planted to the Spaniards. There are many parts in a great degree

* The grand river La Plata deserves a particular description. A Modenese this, by the name of P. Cattanco, who failed up this river, speaks in the being language concerning it: " While I refided in Europe, and read in boks of history or geography that the river de la Plata was one hundred and my miles in breadth, I confidered it as an exaggeration, because in this hemiwe have no example of fuch vast rivers. When I approached its mouth, Ind the most veheusent desire to ascertain the breadth with my own eyes, and The found the matter to be exactly as it was represented. This I deduce partrainly from one circumstance when we took our departure from Monte Viedo, the formed more than one hundred miles from the mouth of the river, and is breadth is confiderably diminished, we sailed a complete day before selfcwered the land on the opposite side of the river; and when we were in middle of the channel, we could not discover land on either side, and saw but the fky and water, as if we had been in fome great ocean. Indeed, hald have taken it to be fea, if the fresh water of the river, which was the the Po, had not fatisfied us that it was a river."

unknown to them, or to any other people in Europe, T principal province of which we have any knowledge, is the which is called Rio de la Plata, towards the mouth of t above-mentioned rivers. This province with all the edjace parts, is one continued plain for feveral hundred miles, tremely fertile, and producer cotton in great quantities; to co, and the valuable herb called paraguay, with a variety fruits, and the prodigious rich pastures, in which are bred s herds of cattle, that it is faid the hides of the beafts are that is properly bought, the carcase being in a manner given ime ago might be bought for to the bargain.

dollar, and the ufual two or three hundren, the general nature woods. The air of La Plata are e

ed the town of Buenes . so called on account of the excellence of the air, on the fou fide of the river, fifty leagues within its mouth, where it is fe ven leagues broad. This is one of the most considerable towns is South-America, the capital of this country, and the only place of traffic to the fouth of Brafil. Here we meet with the meet chants of Europe and Peru, but no regular fleet comes hithe as to the other parts of South-America; two, or at most time register ships make the whole of their regular intercourse with Europe; their returns are very valuable, confishing chiesy the gold and filver of Chili and Peru, sugar and hides. The who have carried on a contraband trade to this city, have four it more advantageous than any other. The benefit of this co traband is now wholly in the hands of the Portuguele, wit keep magazines for that purpole in such parts of Brasil as 1 near this country.

Buenos Ayres is regularly built, its streets are wide, el houses are extremely low, and each of them is accommodate with a garden. The public and private buildings which, fix years ago, were all made of earth, are of more folid and coi modious construction, since the natives have learned the of making brick and lime. The number of inhabitants about thirty thousand. One fide of the town is defended by fortress with a garrison of six or seven hundred men; the same get to it by falling up a river that wants depth, is full of illame shoals, and rocks, and where storms are more frequent more dreadful than on the osean. It is necessary to ance every night on the spot where they come to, and on the most conderate days a pilot must go to found the way for the ship; after having surmounted these difficulties, the ships are obliged, the distance of three lesgues from the town, to put their goods on board some light vessel, and to go to resit, and to wait for their cargoes at Incunado de Barragan, situated seven or eight leagues below.

Purgus fends annually into the kingdom of Peru as many as one thousand five hundred, or two thousand mules. They travel over dreary deserts for the distance of eight or nine hundred leagues. What is not man capable of doing, when necessary, resolution, and avarice are united? neither deep and may swamps, nor summits of losty mountains covered with esernal snow, can bar his progress. The province of Tucaran surnishes annually, sixteen or eighteen thousand oxen, and four or five thousand horses, brought forth and reared upon in own territory. Paragua sends several articles of commerce usespain, but they are all brought from neighbouring districts. The only article it furnishes from its own territory is hides, all these are sent to Europe from Buenos Ayres.

We cannot quit this country without mentioning that extraonlinery species of commonwealth which the Jesuits erected in the interior parts, and concerning which these crafty priests

have endeavoured to keep strangers in the dark.

About the middle of the last century, those fathers reprelented to the court of Spain, that the want of success in their millions was owing to the scandal which the immorality of the Spaniards never failed to give, and to the hatred which their infolent behaviour caused in the Indians. They infinuated, that were it not for those obstacles, the empire of the gospel might, by their labours, have been extended into the most unknown parts of America; and that all those countries might be subdued to his Catholic majesty's obedience, without expense, and without force. This remonstrance met with success, the sphere of their labours was marked out, and the governors of the adjacent provinces had orders not to interfere, not to laffer any Spaniards to enter into this pale, without licences from the fathers; they, on their part, agreed to pay a certain espitation tax, in proportion to their flock, and to fend a certa n number to the king's works whenever they shall be demanded, and the missions should become populous enough to supply them.

On these terms these Jesuits gladly entered upon the scene of action and opened their spiritual campaign. The began by

in exchange for Saint Sacrament, to make the Uragua dary of their possessions, the Jesuits resused to comply a division, or to suffer themselves to be transferred hand to another, like cattle, without their own conce were informed by the Spanish Gazette, that the stitually took up arms; but notwithstanding the exact-beir discipline, they were easily, and with considering deseated by the European troops who were quell them; and in 1767, the Jesuits were removed erica, by royal authority, and their late subjects were the same sooting with the rest of the inhabitants of try.

I respect to the islands belonging to the Spanish mon this part of the globe, we shall notice them in slace; but in order to afford a more particular view panish interest in her South-American colonies, as f the policy pursued by her with respect to them, we reassened additional general remarks on the government, real establishment, and system of trade carried on with

thanding the rapid depopulation of America, a very ble number of the native race still remains both in and Peru, especially in those parts which were not exthe first sury of the Spanish arms, or desolated by the s of their industry, still more rumous. In Guntimals, Vicaragua, and the other provinces of the Mexican emch stretch along the South sea, the race of Indians is rous; their settlements in some places are so populous, wit the name of cities. In the three audiences into sew-Spain is divided, there are, as we have before

inferior stations in society. As the inhabitants both of Market and Peru were accustomed to a fixed residence, and to a cartain degree of regular industry, less yrolence was requisite in brianging them to some conformity with the European modes of early life. But wherever the Spaniards settled among the sympatribes of America, their attempts to incorporate with them have been always fruitless, and often stall to the natives. Impatient of restraint, and dittaining labour as a mark of semiality, they either abandoned their original seats, and sought for impations, or persisted when reduced to a state repugnant to Englance ancient ideas and habits. In the districts adjacent to Carthage and to Pananic, and to Buenos Ayres, the desolation is more great than even in those parts of Mexico and Peru, of which the Spanial of have taken most full possession.

But the establishments of the Spaniards in the new world, though fatal to its ancient inhabitants, were made at a period when that monarchy was capable of forming them to the best advantage. By the union of all its petty kingdoms, Spain become a powerful state, equal to to great an undertaking. In monarchs having extended their prerogatives far beyond the limits which once circumscribed the regal power in every kingdom of Europe, were hardly subject to controul, either time concerting or in executing their measures.

Such was the power of the Spanish monarchs, when were called to deliberate concerning the mode of establishment their dominion over the most remote provinces which ever been subjected to any European state. In this deliberation they felt themselves under no constitutional restraint, and as independent masters of their own resolves, they might the edicts requisite for modelling the government of the colonies, by a mere act of prerogative.

This early interpolition of the Spanish crown in orderegulate the policy and trade of its colonies, is a paculia which distinguishes their progress from that of the colonies ary other European nation. When the Portugueie, the girth, and French, took pollession of the regions in American, that their colonies were suffered to struggle throughout infancy, almost without guidance or protection from parent state. But gold and silver, the first productions the Spanish settlements in the new world, were more alluring and immediately attracted the attention of their monarce.

Though they had contributed little to the discovery, and almost sufficient to the conquest of the new world, they instantly assisted the function of its legislators, and having acquired a specific of dominion formerly unknown, they formed a plan for therefore, to which nothing similar occurs in the history of little of the second
*The fundamental maxim of Spanish jurisprudence with respect WAMerica, is to confider what has been acquired there as vested Me crown, rather than in the state. By the bull of Alexan-27. VI. on which, as its great charter, Spain founded its right, the regions that had been, or should be discovered, were be-Attend as a free gift upon Ferdinand and Isabella. They and their streetfors were uniformly held to be the univertal proprictors of the vast territories which the arms of their subjects conquered in the new world. From them all grants of land diese slowed, and to them they finally returned. The leaders conducted the various expeditions, the governors who presided over the different colonies, the officers of justice, and the ministers of religion, were all appointed by their authority, and removeable at their pleasure. The people who composed Mant settlements were entitled to no privileges indepenthat of the sovereign, or that served as a barrier against the power of the crown. It is true, that when towns were built, and formed into bodies corporate, the citizens were per-"totted to elect their own magistrates, who governed them by hws which the community enacted. Even in the most despotic thes, this feeble spark of liberty is not extinguished; but the cities of Spanish America, this jurisdiction is merely Minicipal, and is confined to the regulation of their own inte-The commerce and police. In whatever relates to public go-Winnent, and the general interest, the will of the sovereign is kw; no political power originates from the people; all centers hite crown, and in the officers of its nomination.

the conquests of the Spaniards in America were comties, their monarchs, in forming the plan of internal policy
their new dominions, divided them into two immense golike viceroy of Peru; the jurisdistion of the former extended
the viceroy of Peru; the jurisdistion of the former extended
the American continent; under that of the latter, was
thended whatever she possessed in South-America. This
ment, which, from the beginning, was attended with
inconveniencies, became intolerable when the remote
swinces of each vice-royalty began to improve in industry

and population. As a remedy for those evils, a third vi royalty has been established in the present century at Santa de Bogotz, the capital of the new kingdom of Granada, jurilarition of which extends over the whole kingdom There Firme and the province of Quito. Those viceroys only represent the person of their sovereign, but possels regal prerogatives within the precincts of their own gove ments, in their utmost extent. Like him, they exercise preme authority in every department of government, civil, http://audictimmal. They have the fole right of nominaments the perions who hold many offices of the highest importantee and the coon had privilege of hipplying thote which, we sae they become vecant by death, are in the royal gift, until fuccetion appointed by the king thall arrive. The external pomp of their government is fuited to its real dignity and power. Their courts are formed upon the model of that a Madrid, with horse and foot guards, a houshold regularly establifted, numerous attendants, and enfigns of command, difplays ing such magnificence as hardly retains the appearance of delegated authority.

But as the vicerous cannot discharge in person the functions of a supreme magistrate in every part of their extensive jurisdifficient they are aided in their government by officers and tribunals fimilar to those in Spain. The conduct of civil affairs in the various provinces and districts, into which the Spanish dominions in America are divided, is committed to magistrates of various orders and denominations; some appointed by the king. others by the viceroy, but all subject to the command of the latter, amenable to his jurifdiction. The administration of justice" is vested in tribunals, known by the name of Audiences, and formed upon the model of the court of chancery in Spain. Their are eleven in number, and dispense justice to as many diffricts, into which the Spanish dominions in America are divided. The number of judges in the court of Audience is various, according to the extent and importance of their jurifdifferen. The flation is no lefs honourable than lucrative, Both civil and criminal causes come under their cognizance, and for eich peculiar judges are fet apart. The Spanish viceroys have siten attempted to intrude themselves into the feat of justice. and with an ambition which their diffance from the controll of a superior rendered boild, have aspired at a power which even their mafter does not ventue to affaire. In order to check an uterpation which must have annihilated justice and security

Spanish colonies, by subjecting the lives and property of be will of a fingle man, the viceroys have been prohiin the most explicit terms, by repeated laws, from interin the judicial proceedings of the courts of Audience, s delivering an opinion, or giving a voice with respect to int lifigated before them. In some particular cases, in any question of civil right is involved, even the political ions of the viceroy may be brought under the review of part of Audience, which, in those instances, may be dan intermediate power placed between him and the as a constitutional barrier to circumscribe his juril-But as legal restraints on a person who represents the sign, and is clothed with his authority, are lattle fuited to inius of Spanish policy, the hesitation and reserve with it confers this power on the courts of Audience are reble. They may advile, they may remonstrate; but, in ent of a direct collision between their opinion and the will viceroy, what he determines must be carried into execund nothing remains for them but to lay the matter before ng and the council of the Indies. Upon the death of a 7, without any provision of a successor by the king, the power is vested in the court of Audience resident in ntal of the vice-royalty, and the senior judge, assisted by thren, exercises all the functions of the vicercy while ce continues vacant. In matters which come under the ince of the Audiences, in the course of their ordinary tion, as courts of justice, their sentences are final in every m concerning property of less value than fix thousand but when the subject in dispute exceeds that sum, their as are subject to review, and may be carried by appeal the royal council of the Indies.

his council, one of the most considerable in the monarchy nity and power, is vested the supreme government of all possesses in America. It was first established by the in the year 1511, and brought into a more perfect y Charles V. in the year 1524. Its jurisdiction extends y department, ecclesistical, civil, military and commercial laws and ordinances relative to the government and of the colonies originate there, and must be approved the thirds of the members, before they are allied in the the king. All the offices, of which the nomination is to the crown, are conferred in this council. To start a semployed in America, from the vicercy downwards, their terviews their conduct, rewards their services.

and inflifts the punishments due to their malversations: turfore it, is laid all the intelligence, either public or fecret, retrieved from America, and every scheme of improving the administration, the police, or the commerce of the colonies, is submitted to its consideration. From the first institution of the council of the Indies, it has been the constant object of the catholis monarchs to maintain its authority, and to make such additions from time to time, both to its power and its splendor, as might render it formidable to all their subjects in the new world. Whatever degree of public order and virtue still remains in that country, where so many circumstances conspire to relax the former, and to corrupt the latter, may be ascribed in a great measure to the wise regulations and vigilant inspection of this respectable tribunal.

As the king is supposed to be always present in his council of the Indies, its meetings are held in the place where he relides. Another tribunal has been instituted, in order togulate such commercial affairs as required the immediate and pertonal inspection of those appointed to superintend them? this is called Cafa de la Contratacion, or the house of trade; and was established in Seville, the port to which commerce with the new world was confined, as early as the year a501. It may be confidered both as a board of trade and as a court of judicature: in the former capacity, it takes cognizance of what! ever relates to the intercourse of Spain with America; it regulates what commodities should be exported thither, and has the infpection of such as are received in return : it decides concerning the departure of the fleets for the West-Indies, the freight and burden of the ships, their equipment and destinate tion: in the latter capacity it judges with respect to every question, civil, commercial, or criminal, arising in confequence of the transactions of Spain with America; and in both thele departments, its decisions are exempted from the review of any court but that of the council of the Indies.

Such is the great outline of that tystem of government which Spain has established in her American colonies. To enumerate the various subordinate boards and officers employed in the administration of justice, in collecting the public revenue, and in regulating the interior police of the country; to describe their different functions, and to inquire into the mode and established of their operations, would prove a detail no less intricate that; minute, and uninteresting.

The first object of the Spanish monarchs was to secure: the productions of the colonies to the parent state, by an absolute

tion of any interconfletwith foreign nations. They took ellen of America by right of conquest, and, conscious not of the feebleness of their infant fentements, bur aware of difficulty in ellablishing their dominion over regions fo exice, or in retaining to many reluctant nations under the yoke, evirended the intrafion of firangers; they even fluored their then, and endeavoured to keep them at a diffance from coults: This spirit and jealouty and exclusion, which at liftwas natural, and perhaps necessary, augmented as their poshave in America extended, and the value of them came to be more felly understood: in confequence of it, a fyllem of colotill swis introduced, to which there had hitherto been nothing familie among mankind. In their American fettlements, the Spunia munarchs took what was peculiar to each, and fludied to nestion. By fending colonies to regions to remote, by effabbilling in each a form of interior policy and administration, wer diffinel governors, and with peculiar laws, they disjoined refuse the mother country. By retaining in their own back the rights of legislation, as well as that of imposing taxes. logether with the power of nominating the persons who filled thery department of executive government, civil or military, by secured their dependence upon the parent state. Happily pash, the fituation of her colonies was fuch, as rendered it polable to reduce this new idea into practice. Almost all the countries which the had discovered and occupied lay within the tropies. The productions of that large portion of the globe are. different from those of Europe, even in its most southern pro-Vinces. The qualities of the climate and of the foil naturally turn the industry of fuch as fettle there into new channels. When the Spaniards first took policition of their dominious in America. the precious metals which they yielded were the only object that attracted their attention. Even when their efforts began to the a better direction, they employed themselves almost wholly a roung fuch peculiar productions of the climate, as, from their may on value, were of chief demand in the mother country. allowed by wift profpects of immediate wealth, they diffiained walle their industry on what was less lucrative, but of hipemoment. In order to render it impossible to correct this to, and to prevent them from making any offerts in industry the might interfere with those of the mother country, the this diment of feveral species of minufactures, and even the there of the vine, or olive, are prohibited in the Spanish comies, under fevere penalties. They mult trust entirely to the

Bids are ved , alleft intra- A and

OBSERVATIONS ON THE

mother country for the objects of primary necessity. Their clothes, their furniture, their inftruments of labour, their luxuries, and even a combilerable part of the provisions which they contume, were imported from Spain. During a great part of the fixteenth century, Sp.in. policiling an extensive commerce. and flourishing manufactures, could supply with eafe the growing. demands of her colonies from her own ltores. The produce of; their mines and plantations was given in exchange for thefer bet all that the colonies received, as well as all that they gave, was conveyed in Spanish bottoms; no vessel belonging to the colonies was over permuted to carry the commodities of America to Europe : even the commercial intercourse of one colony with another was either abtolutely prohibited, or limited by many jealous restrictions. All that America yields flows into the ports of Spain; all that it confumes must iffue from them, No foreigner can enter its colonies without expreis permission ; no velfel of any foreign nation is received into their harboures and the pains of death, with confitcation of moveables, are denounced against every inhabitant who presumes to trade with them. Thus the colonies are kept in a flate of perpetual pus pillage; and by the introduction of this commercial dependence, a refinement in policy, of which Spain let the first example to the European nations, the supremacy of the parent state hath been maintained over remote colonics during more than two centuries and a half.

Such are the maxims to which the Spanish monarchs feem to have attended in forming their new tettlements in America; but they could not plant with the same rapidity that they had defitioned; and, from many concurring causes, their progress hap been extremely flow in filling up the immense void which their d-vastation had occasioned. Migration and population has been formuch damped, that fixty years after the discovery of the new world, the number of Spaniards, in all its provinces, is computed not to have exceeded lifteen thousand.

The mode in which property was diffributed in the Spanish colonies, and the regulations effablished with respect to the transmission of it, whether by descent or by sale, were extremely inflavourable to population. In order to promote a rapid increde of people in any new lettlement, property in land englit to be divided into small shares, and the alienation of it should be rendered extremely easy. But the rapaciousness of the Spanish conquerors of the new world paid no regard to this landamental maxim of policy; and, as they possessed

which enabled them to gratify the utmost extravigance of their wishes, many seized districts of great extent, and held them at encouneradar. By degrees they obtained the privilege of converting a part of these into mayorasgos, a species of sief, introdicted into the Spanish system of seudal jurisprudence, which the meither be divided nor alienated. Thus a great portion of indeed property, under this rigid form of entail, is withheld some circulation, and descends from father to son unimproved, and of little value either to the proprietor or to the community.

To this we may add, that the support of the enormous and expensive fabric of their ecclesiastical establishment has been a burden on the Spanish colonies, which has retarded the progress of population and industry. The payment of tythes is a heavy tax on industry; and if the exaction of them be not regulated addeirosmicribed by the wisdom of the civil magistrate, it becomes intolerable and ruinous: but, instead of any restraint on the claims of ecclesiastics, the inconsiderate zeal of the Spanish legislators admitted them into America in their full extent, and a once imposed on their instant colonies a burden which is in no sight degree oppressive to society, even in its most improved size.

By the famous regulations of Charles V. in 1542, the high pretentions of the conquerors of the new world, who binfidered its inhabitants as flaves, to whose service they had equired a full right of property, were finally abrogated. From that period the Indians have been reputed freemen, and entitled to the privileges of fuljeas. When admitted into this rank, it deemed just, that they should contribute towards the support improvement of the fociety which had adopted them as imbers. But as no confiderable benefit could be expected hom the voluntary efforts of men unacquointed with regular sidultry, and averfe to labour, the court of Spain found it neces-By to fix and fecure, by proper regulations, what it thought restonable to exact from them. With this view, an annual tox impoled upon every male from the age of eighteen to fifty; at the same time, the nature as well as the extent of the ferwices which they might be required to perform, were afterand with precision. This tribute varies in different pro-Wikes; but if we take that paid in New-Spain as a medium, its minal amount is nearly four shillings a head. Every Indian is ther an immediate valid of the crown, or depends upon some Thist to whom the district in which he relides has been granted "for a limited time, under the donomination of an entermination

١

In the former case, about three-fourths of the tax is parties the royal treasury; in the latter, the same proportion belongs to the holder of the grant.

The benefit arising from the services of the Indians either to the crown, or to the holder of the encommenda, ing to the same rule observed in the payment of tribute fervices, however, which can now be legally exacted, an different from the talks originally imposed upon the I The nature of the work which they must perform is and a recompence is granted for their labour. The st The ftat vices deman lians may be divided int branches: the" aployed in works of prima ceffity, withe ety cannot fublist comforta are compel e mines, from which the value and importance. In colonies d quence of re obliged to affift in the cu maize and ecessary consumption; in cattle; in t public utility; in building and in forming high roads; but they cannot be confirming labour in railing vines, clives and fugar-canes, or any fpe cultivation, which has for its object the gratification of c. commercial profit. In confequence of the latter, the ! are compelled to undertake the more unpleafant talk, of a ing ore from the lawels of the earth, and of refining it coffive precedes, no lets unwholesome than operofe.

The mode of explicing both thele fervices is the fame Indians are called out successively in divisions, termed and no perton can be compelled to go but in his turn. In the number called out must not exceed the seventh part inhabitants in any diffrict. In New-Spain, where the are more numerous, it is fixed at four in the hundred. what time the labour of such Indians as are employed i culture continues, we have not been able to learn: but in each mita, or division, desirned for the mines, remains tix mentles; and while engaged in this tervice, a l never receives less than two thehitigs a day, and ofter more than double that tum. No Indian, refiding at a cultance than thirty miles from a mine, is included in th de divilien employed in working it; nor are the inhi of the low country compelled to remote from that wa mate to the cold clavated regions where minerals abor

The Indians who live in the principal towns are entirely finded to the Spanish laws and magistrates, but in their own williges they are governed by casiques, some of whom are The descendants of their ancient lords, others are named by the Spanish viceruys. These regulate the petty affairs of the people under them, according to maxims transmitted to them by mudition from their ancestors. A certain portion of the referred fourth of the annual tribute is deftined for the falary of the exciques and protectors; another is applied to the mainsemice of the clergy employed in the instruction of the Indians, Answer part feems to be appropriated for the ule of the Indam themselves, and is applied for the payment of their tribute in years of famine, or when a particular diffrict is affilled by any extraordinary local calamity. Befides this, province is made by various laws, that holpitals shall be foundof in every new fettlement for the reception of Indians. Such lowuls have accordingly been erected, both for the indigent od infirm, in Lima, in Cuzco, and in Mexico, where the ladans, on the whole, may be faid to be treated with tendernel's and humanity. Such are the leading principles in the jurisprudence and policy by which the Indians are now governed in the provinces belonging to Spain.

Together with the form of civil government in the Spanish colonies, the peculiarities in their ecclefialtical constitution tent confideration. Notwithstanding the superstitious venemion with which the Spaniards are devoted to the holy (ee, the vigilint and jealous policy of Ferdinand early prompted to take precautions against the introduction of the papal common into America. With this view, he folicited Alexuder VI. for a grant to the crown of the tythes in all the tewly-discovered countries, which he obtained on condition of Mamking provision for the religious instruction of the natives. Son after Julius II. conferred on him, and his fuccessors, the ment of patronage, and the absolute disposal of all ecclesiastical business there. In consequence of those grants, the Spanish monitchs have become in effect the heads of the American thurch: in them the administration of its revenues is vested, and their nomination of persons to supply vacant benefices is instantly confirmed by the pope. Thus, in all Spanish America, authority of every species centers in the crown: there no collision is known between spiritual and temporal jurisdiction; the king is the only superior, his name alone is heard of, md no dependence upon any foreign power has been introduced.

with its full train of archbished in the same form as in Spains with its full train of archbisheps, bishops, deans and other dignitaries. The inferior clergy are divided into three classes under the denomination of cutas, destriners and missioneres. The first are parish pricits in those parts of the country where the Spaniards have tertled; the second have the charge of such districts as are inicipated by Indians subjected to the Spanish government, and living under its protection; the third are exampleyed in infirmting and converting those forcer tribes which distant tubin short to the Spanish yoke, and live in remote or insection, they one, to which the Spanish arms have not penetrated. So numerous are the excelesialities of all those various orders, and so that the spectate liberaity with which many of them are endewed, that the revenues of the church in America are immerate.

In viewing the flate of colonies, where not only the number but influence of ecolefialties is to great, the character of this powerful body is an of just that morns particular attention. confiderable part of the fecular clergy in Mexico and Peru are natives of Spain. As perfore long accustomed, by the cir education, to the accommend and indeferee of scademic life more incepable of aftive enterprise, and left dilpoled to ftr cuinto new paths, thin any order of men, the ecclefiaftical advturers by whom the Arcelian church is recruited, are commotuch es, from morat or rank in life, have little protpett faceels in their own country. Accordingly, the fecular pri in the new world are full less dritinguished, than their breth in spain for Lierary accomplishments of any species; and thous - " be the ample possinin which has been made for the Ameri 🔼 🦈 charch, many of its members ergoy the cafe and independer w is are law mable to the calculation of reience, the box 4-3 of the articles whose bandly, during two centuries and a hard produced one corbin whose works convey such afeful infa * 1 more a, or policle fath a degree of merit, as to be rank # " and my thefoll which at tack the attention of calightened nation -Ber the grovell part of the ecclefullies in the Spanish fets # 7 ments are 10, 3 to. They are almost the Spanish ecclesiastics from whom we have received any its, either of the civil or natural history of the various ices in America.

n this brief furvey, some idea may be formed of the r Rate of the Spanish colonies. The system of commertercourse between them comes next in order to be ex-1. If the dominions of Spain in the new world had of fuch moderate extent, as bore a due proportion to the state, the progress of her colonizing might have been ed with the laine benefit as that of other nations: but in less than half a century, her inconsiderate rapacity zed on countries larger than all Europe, her inability to :h vast regions with a number of inhabitants sufficient ecultivation of them, was to obvious, as to give a wrong on to all the efforts of the colonists. They did not ompact tettlements, where industry, circumscribed withper limits, both in its views and operations, is conwith that fober, perfevering spirit, which gradually rts whatever is in its possession to a proper use, and derives the greatest advantage. Instead of this, the Spaniards, I he the houndless prospect which opened to them di-

184 OBSERVATIONS ON THE

Of all the methods by which riches may be acquired attack of learching for the precious metals is one of the most inviting to men, who are either unaccustomed to the regular assiduity with which the culture of the earth and the operations of commerce must be carried on, or who are so enterprising and rapacious as not to be latisfied with the gradual returns of profit which they yield. Accordingly, as foon as the feveral countries in America were subjected to the dominion of Spain, this was almost the only method of acquiring wealth which occurred to the adventurers by whom they were conquered. Such provinces of the continent as did not allure them to fettle, by the prospect of their affording gold and filver, were totally negli ed. Those in which they met with a disappointment of sanguine expectations they had formed were abandoned. Even the value of the islands, the first fruits of their discoveries, and the first object of their attention, sunk so much in their estimation, when the mines which had been opened in them were exhausted, that they were deserted by many of the planters, and left to be occupied by more industrious possessors. All crowded to Mexico and Peru, where the quantities of gold and filver found among the natives, who fearched for them with little industry and less skill, promised an unexhausted flore, as the recompence of more intelligent and perfevering efforts.

During feveral years, the ardour of their refearches was kept up by hope rather than success. At length, the rich filver mines of Potofi, in Peru, were accidentally discovered in the year 1545, by an Indian, as he was clambering up the mountain in pursuit of a llama which had strayed from his flock. Soon after the mines of Sacotecas, in New-Spain, little inferior to the other in value, were opened. From that time, successive discoveries have been made in both colonies, and filver mines are now to numerous, that the working of them, and of fome few mines of gold in the provinces of Tierra Firmé, and the new kingdom of Granada, has become the capital occupation of the Spaniards, and is reduced into a lystem no less complicated than interested. To describe the nature of the various ores, the mode of extracting them from the howels of the earth, and to explain the feveral preceffes by which the metals are separated from the substances with which they are mingled, either by the action of fire, or the attractive powers of mercuty, is the province of the natural philosopher or chymist, rather than of the historian.

The exceptant profusion with which the mountains of the hew world poured forth their treasures astenished mankind, who and been hitherto accustomed to receive a penurious supply of the precious metals, from the more feanty stores contained in he aines of the ancient hemisphere. According to principles Computation, which appear to be extremely moderate, the wantity of gold and filver that has been regularly entered in be ports of Spain, is equal in value to four millions sterling anully, reckoning from the year 1192, in which America is discovered, to the present time. Immense as this sum is, e Spanish writers contend, that as much more ought to be ed to it, in confideration of treasure which has been extrasted from the mines, and imported fraudulently into Spain without gying duty to the king. By this account, Spain has drawn the new world a supply of wealth, amounting to more itwo thousand millions of pounds stelling.

The mines, which have yielded this amazing quantity of palare, are not worked at the expense of the crown, or of public. In order to encourage private adventurers, the palon who discovers and works a new vein is entitled to the reperty of it. Upon laying his claim to fuch a discovery fore the governor of the province, a certain extent of land measured off, and a certain number of Indians ellected him, miler the obligation of his opening the mine within a limited se, and of his paying the cultomary duty to the king for what it shall produce. Invited by the facility with which such ments are obtained, and encouraged by fome striking examples I faccefs in this line of adventure, not only the tanguine and e bold, but the timid and dufident, enter upon it with aftothing ardour. The charms of this pursuit, like the rage for tep play, are to bewitching, and take fuch full peticifion of the mind, as even to give a new bent to the natural temper, finder its influence the cautious become enterprising, and the sectors profuse. Powerful as this charm naturally is, its force sugmented by the arts of an order of men known in Peru by east name of fearthers: these are commonly persons of del-Esse fortunes, who availing themselves of some skill in mineplays accompanied with the intenuating manner and confident preparations peculiar to projectors, address the wealthy as if the goldous: by plaufil le descriptions of the appearances which by have discovered of rich veins hitherto unexplored; by priving, when require, specimens of promiting ore; by affraing, with an impufing attorence, that success is contain, and

that the expense must be tristing, they seldom fail to persuade; an association is someti, a small sum is advanced by each comportner, the mine is opened, the searcher is entrusted with the sole direction of every operation, unforeseen difficulties occur, new demands of money are made, but amidst a succession of mappenini cuts and deless, hope is never extinguished, and the argour of expectation builds abates.

Such is the ignit that must be formed, wherever the active expire is of any tocative re-chiefly employed in working mines of gold and flavor. No ignit is more adverte to tach improvement in against our commerce, as render a nation really equal int.

But in the Spanish colonies, government is Rudious to cherific a sport which it should have laboured to depress, and by the function of its approbation, augments that inconfiderate credulity which has turned the aftive industry of Mexico and Peruinto such an improper channel. To this may be imputed the stander progress which Spanish America has made during two contains and a half, either in uteful manufactures, or in those furnative branches of cultivation which furnish the colonies of other nations with their staple commodities.

As the activity and enterprite of the Spaniards originally took this direction, it is now to difficult to bend them a different way, that aithough from various cautes, the gain of working mines is much decreased, the falcination continues, and almost every perion who takes any active part in the commerce of New-Spain or Peru, is fall engaged in tome adventure of this kind.

But though mines are the chief object of the Spaniards, and the precious metals which there yield form the principal article in their commerce with America, the fertile countries which they pollers there abound with other commodities of fuch value or leaventy, as to attract a confiderable degree of attention; Cochineal is a production almost peculiar to New-Spain; of luch demand in commerce, that the fale is always certain, and it yields tuch profit as amply rewards the labour and care employed in coaring the curious inletts of which this valuable drug is composed, and preparing it for the market. Quinquina, or Jeffert's back, the most calutary simple, perhaps, and of most reitorative virtue, that Previdence has made known unto man, is found only in Pero, to which it affords a lucrative branch of commerce. The indigo of Guatimala is imperior in quality to that of any province in America, and cultivated to a confiderable extent. Cacoa, though not peculiar to the Spanish colo-

ses, attains to its highest flate of perfection there, and from the great confinmation of chocolate in Europe, as well as in Anetics, as a valuable commodity. The tobacco of Cuba, of mesquifite flevour than any brought from the new world; the legar raised in that island, in Hispaniola, and in New-Spain, syther with drugs of various kinds, may be mentioned among the tatural productions of America, which enrich the Spanish nerce. To these must be added, an article of no inconsiand execute, the exportation of hides, for which, as well as for many of those enumerated, the Spaniards are more indotted to the wonderful fertility of the country than to their can leselight and industry. The domestic animals of Europe, particulty horned cattle, have multiplied in the new world with appidity which almost exceeds belief. A few years after the Speniards fettled there, the herds of tame cattle became fo auteous, that their proprietors, as we have before observed, rataed them by thousands. Less attention being paid to them they continued to increase, they were suffered to run wild, and presiling over a country of boundless extent, under a mild climite, and covered with rich pasture, their number became mmenfe. They range over the vast plains which extend from Buenos Ayres towards the Andes, in herds of thirty or forty thouland; and the unlucky traveller who once falls in among them, may proceed several days before he can disentangle himled from among the crowd that covers the face of the earth, and feems to have no end. They are hardly less numerous in New Spain, and in feveral other provinces; they are killed merely for the fake of their hides; and the flaughter at certain fealous is fo great, that the stench of the carcales which are left with field would infeft the air, if large pocks of wild dogs, and walt flocks of gallinazos, or American vultures, the most toncious of all the feathered kind, did not inflantly devour them. The number of those hides exported in every fleet to Europe is very great, and is a lucrative branch of commerce.

Almost all these may be considered as staple commodities poculiar to America, and different, if we except that last menbaned, from the productions of Spain.

When the importation into Spain of those various articles from her colonies first became active and considerable, her interior industry and manufactures were in a state so prosperous, that with the product of these she was able both to purchase the commodities of the new world, and to answer its growing demands. Under the reigns of Ferdinand and Isabella, and

Charles V. Spain was one of the most industrious consisteres in Europe: her manufactures in wool, and flax, and filk, were for extensive, as not only to furnish what was sufficient for herown confumption, but to afford a furplus for exportation. When a market for them, formerly unknown, and to which the alone had access, opened in America, the had recourfe toher domestic store, and found there an abundant supply." This new employment must naturally have added vivacity to the spirit of industry; nourithed and invigorated by it, the manufactures, the population, and wealth of Spain might have gone on increasing in the same proportion with the growth of her colonies; but various causes prevented this. The fample thing happens to nations as to individuals. Wealth, which 'flows in gradually, and with moderate increase, seeds and nourishes that activity which is friendly to commerce, and calls it = forth into vigorous and well-conducted exertions; but when opulence pours in juddenly, and with too full a fiream, it overturns all lober plans of industry, and brings along with it and tafte for what is wild and extravagant, and daring in bufiness 1 or in action. Such was the great and fudden augmentation of power and revenue that the possession of America brought into-Spain; and fome lymptoms of its permicious influence upon the political operations of that monarchy foon began to appear.

When Finlip II. atcended the Spanish throne, with talents far inferior to those of his father, and remittances from the colimies became a regular and confiderable branch of revenue, the fatal operation of this rapid change in the state of the kings". dom, both on the monarch and his people, was at once conspicuous. Philip, possessing that spirit of unceasing affiduity, which often characteriles the ambition of men of moderate talents, entertained fuch an high opinion of his own refources, that he thought nothing too arduous for him to undertake; thut up himself in the solitude of the escurul, he troubled and annoyed all the nations around him. He waged open war with the Dutch and English; he encouraged and aided a rebellious fection in France; he conquered Portugal, and maintimed aimies and garriions in Italy, Africa, and both the Indies. By fuch a multiplicity of great and complicated operations, purioed with ardour during the course of a long reign, Spain was drained both of men and money. Under the weak administration of his successor, Philip III, the vigour of the nation continued to decreate, and funk into the lowest decline, when the inconfiderate bigotry of that monarch expelled at once

the ships which attempted to carry it on, were be plundered by enemies whom she once despised, culture, the primary object of industry in every profate, was neglected, and one of the most fertile countriope hardly raised what was sufficient for the support minhabitants.

portion as the population and manufactures of Spain the demands of her colonies continued to increase, miards, like their monarchs, intoxicated with the thich poured in annually upon them, deserted the industry, to which they had been accustomed, and with eagerness to those regions from whence this issued. By this rage of emigration, another drain ed, and the strength of the colonies augmented by exthat of the mother country.

thinned of people, and decreating in industry, was supply the growing demands of her colonies; she had to her neighbours; the manufactures of the Low of England, of France, and of Italy, which her ited into existence, or animated with new vivacity, in abundance whatever she required. In vain did amental law, concerning the exclusion of foreigners e with America, oppose this innovation. Necessity, verful than any statute, defeated its operations, and

try correct added to simpley, every emigras a conzent to 3 to the community, as all the benefit of aroweing his demand internal due of Spain from the close of and fuch her inability to supply the g

colonics.

The fatal effects of the disproportion b and her capacity of answering them, have by the mode in which Spain has endeas intercourse between the mother country is from her idea of monopolizing the trac debarring her subjects there from any foreigners, that all her jealous and fyst have ariten; thefe are to fingular in their na ces, as to merit a particular explanation. the monopoly at which the simed. Spain d with her colonies in an exclusive compar been adopted by nations more commercial, a mercantile policy was an object of greater : to have been better understend. The I whole trade with their colonies, both in t Indies, to exclusive companies. The Engli the Dines, have intrated even

of the commodities which it brought faould the fame board, before it could be permitted to In consequence of this regulation, all the trade of with the new world centered originally in the port of t, and was gradually brought into a form, in which it meandacted with little variation from the middle of the th century, almost to our own times. For the greater y of the valuable cargoes tent to America, as well as for ere easy prevention of fraud, the commerce of Spain, he colonies, was carried on by fleets which failed under convoys; their fleets confifted of two iquadions, one wished by the name of the galleons, the other by that of sta, are equipped annually. Formerly they took their ure from Seville, but as the port of Cadiz has been More commodious, they have failed from it lince the 720.

sigulleons destined to supply Terra Firma, and the biss of Peru an Chili, with almost every article of luxury sistary consumption that an opulent people can demand, first at Carthagena, and then at Porto Bello; to the for-thic merthants of Santa-Martha, Garaccas, the new kings Granada, and several other provinces resort; the latter be great mart for the rich commerce of Peru and Chili. to feason when the galleons are expected, the product of all

with that simplicity of transaction and dence which accompanies extensive comits course to Vera Cruz. The treasured at Puebla de los Angeles, in expect carried thither, and the commercial optonducted in the same manner with the inserior to them only in importance as as soon as they have completed their rendezvous at the Havannah, and re Europe.

The trade of Spain with her colonies and restricted, came necessarily to be confirit, and upon the same principles as company. Being confined to a single thrown into a sew hands, and almost gradually engrossed by a small number of merly in Seville and now in Cadiz. I which they can easily form, may altogethe tition which preserves commodities at the by acting in concert, to which they as mutual interest, they may raise and lost pleasure; in consequence of this, the goods in America is always high, and

mier, whole overgrown monopolitis endervour to check the populs of every one whole incroachments they dread. This front of the American commerce to one port, not only affects to domestic flate, but limits its foreign operations. A monopolil may acquire more, and certainly will hazard less by a conhed trade which yields exorbitant profit, than by an extensive conserve in which he receives only a moderate return of gain. his often his interest not to enlarge, but circumscribe the iphero of his aftivity, and inflead of calling forth more vigorous extrime of commercial industry, it may be the object of his atthen to check and fet bounds to them. By some such maxim De accentile policy of Spain feems to have regulated its interconie with America. Inflered of furnishing the colonies with Empen goods in fuch quantity as might render both the price and the profit moderate; the merchants of Seville and Cadiz hen to have supplied them with a sparing hand, that the eagermu of competition amongst customers obliged to purchase in a tanty market, might enable the Spanish factors to dispose of their cargoes with exorbitant gain. About the middle of the Mentury, when the exclusive trade to America from Seville was in its most flourishing state, the burden of the two united foundrons of the galleons and flota did not exceed twenty-feven wind five hundred tons. The supply which such a fleet foold carry, must have been very inadequate to the demands of thele populous and extensive colonies, which depended upon it for all the luxuries, and many of the necessaries of life.

Spain early became fensible of her declension from her former properity, and many respectable and virtuous citizens employed that thoughts in devising methods for reviving the decaying intulty and commerce of their country. From the violence of the remedies proposed, it is evident how desperate and fatal the malady appeared.

believe wild projects, many schemes, well digested and benetich were suggested; but under the sceble monarchs with whom the reign of the Austrian line in Spain closed, incaracity adminderision are conspicuous in every department of governtic. Instead of taking for their model the active administratical Charles V. they affected to imitate the cautious procrastanting wildom of Philip II. and destitute of his talents, they described perpetually, but determined nothing. No remedy

Smith's Inquiry, ii. 171

and nown as the monitoring optained q throne, they discerned this change in the and took advantage of it. It was the fir: to suppress an innovation which had crep of the war, and had overturned the whole commerce with America. The English ar periority in naval power, having acquired fea, as to eut off all intercourse between S Spain, in order to furnish her subjects i necessaries of life, without which they co the only means of receiving from thence a fure, departed fo far from the usual rigou open the trade with Peru to her allies th chants of St. Malo, to whom Louis XIV. of this lucrative commerce, engaged in it ried it on upon principles very different frniards. They supplied Peru with Europ moderare price, and not in flinted quantit they imported were conveyed to every America in such abundance as had never former period. If this intercourse had exportation of European commodities fro ceased, and the dependence of the cold

country have been at an end. The most powere therefore iffued, probibiting the adm

speace, which France and Spain defired with equal ardour, Philip V. not only conveyed to Great-Britain the Afficiate, or contract for supplying the Spanish colonies with negatives, which had formerly been enjoyed by France, but granted it the more extraordinary privilege of fending annually to the fair : of Porto Bello, a ship of five hundred tons, laden with Eusepen commodities. In confequence of this, Emilifi factories were established at Carthagena, Panama, Vera Citiz, Buenes Ayres, and other Spanish, settlements. The veil with which Spain had hitherto covered the state and transactions of fer colonies was removed. The agents of a rival nation, refiding in the towns of most extensive trade, and of chief refort, had the best opportunities of becoming acquainted with the interior condition of the American provinces, of observing their stated and occasional wants, and of knowing what commodities might be imported into them with the greatest advantage. In consequence of information to authentic and expeditious, the mershorts of Jamaica and other English colonies who traded to the Spanish main, were enabled to affort and proportion their sarges to exactly to the demands of the marker, that the contriband commerce was carried on with a facility, and to an extent unknown in any former period. This, however, was set the most fatal consequence of the Assiento to the trade of Spain. The agents of the British South lea company, under cover of the importation which they were authorited to make by the ship fent annually to Porto Bello, poured in their commodities on the Spanish continent, without limitation or multaint. Instead of a ship of five hundred tons, as stipubited in the treaty, they usually employed one which exseeded nine hundred tons in burden; she was accompanied by two or three smaller vessels, which mooring in some seighbouring creek, supplied her clandestimely with fresh tales of goods, to replace fuch as were told. The infpectors af the fair, and officers of the revenue, gained by exorpitant presents, connived at the fraud. Thus, partly by the operasiens of the company, and partly by the activity of prisime interlopers, almost the whole trade of Spanisi-America ingroffed by foreigners. The immense commerce of the follows, formerly the pride of Spinn, and the envy of sigher nations, funk to nothing, and the iquadion itielr reauced from fifteen thousand to two tneurand tons, served hardly any purpose but to fetch home the royal revenue is siling from the fifth on filver.

factive, that the merchants in the tomed to confider it almost as at carried mornaus and complain measure, and rendered more interacts of violence committed by

guarda custas, precipitated Greatin consequence of which the latte the Assente, and was left at libert her colonies, without being restrai a foreign power. As the formidable increachments

tican trade had nifeovered to the tion of European goods in their consideration of European goods in their in advantage of accommodating their in demand of the various provinces, it of the tion that goods of the various provinces, it from that ancient one, of fending that mode of communication had the mode of communication had the times retarded by various accidents, a water which triged in Europe; but for to be ill adapted to afferd America and what it wanted. The feateity of Span challettements from their constants.

clients and flota fail, by merchants in Seville or Cadiz, upon examing a licence from the council of the Indies, for which they pay a very high premium, and are deftined for those ports in America where any extraordinary demand is foreseen or examinated. By this expedient, such a regular supply of the commodities, for which there is the greatest demand, is conveyed to the American market, that the interloper is no longer allared by the same prospect of excessive gain, or the people in the colonies urged by the same necessity to engage in the hazard-our adventures of contraband trade.

In proportion as experience manifelled the advantages of carrying on trade in this mode, the number of register ships increased, and at length, in the year 1748, the galleons, after bwing been employed upwards of two centuries, were finally and sinde. From that period there has been no intercourse with Chiliand Peru but by fingle fhips, difpatched from time to time # occasion requires, and when the merchants expect a profitable market will open. These ships fail round cape Horn, and convey directly to the ports in the South fea the productions and manufactures of Europe, for which the people fettled in thole countries were formerly obliged to repair to Porto Bello or Panama. These towns, as has been formerly observed, must modully decline when deprived of that commerce to which they owed their prosperity. This disadvantage, however, is more than compensated by the beneficial effects of this new Arangement, as the whole continent of South-America receives Dew supplies of European commodities with so much regularity, and in fuch abundance, as must not only contribute greatly to the happinels, but increase the population of all the colohies fettled there. But as all the register ships destined for the outh feas must still take their departure from Cadiz, and are bliged to return thither, this branch of the American comerce, even in its new and improved form, continues subject he restraints of a species of monopoly, and feels all the ernicious effects of it.

Among the new tastes which the people of Europe have quired, in consequence of importing the productions of ofe countries which they conquered in America, that for occlate is one of the most universal. The use of this liquor, de with a paste formed of the nut or almond of the cococa, compounded with various ingredients, the Spaniards first area from the Mexicans; and it has appeared to them, and the other European nations, so palatable, so nourishing, and so wholesome, that it has become a commercial article of

.. ... imail illands of (the coast of Caraccas, gradually en of the cocoa trade. The traffic wi this valuable commodity cealed almo the supine negligence of the Spaniard commercial arrangements, that they from the hands of foreigners this colonies at an exorbitant price. In orc less difgraceful than pernicious to h the year 1728, granted to a body o right to the commerce with Caraccas at of their employing, at their own expe of armed vessels to clear the coast of ciety, distinguished sometimes by the of Guipuícoa, from the province of Spa bliffied, and fometimes by that of the from the district of America to which on its operations with fuch vigour and recovered an important branch of con fuffered to be wrested from her, and is p an article of extensive consumption at only the parent state, but the colony of great advantages from this institution. M. Bristan. D. .

ļ

In confequence of this, there is such a competition, that, both with respect to what the colonies purchase, and what they sell, the price teems to be fixed at its natural and equitable rate. The company has not the power of raising the former, or of degrading the latter at pleasure; and accordingly, since it was established, the increase of culture, of population, and of live stock, in the province of Caraccas, has been very confiderable.

While Spain adhered with rigour to her ancient maxims conterning her commerce with America, she was so much atraid of spening any channel, by which an illicit trade might find semilion into the colonies, that fhe almost shut herfelf out from any intercourse with them, but that which was carried on by her annual fleets. There was no establishment for a regular communication of -ither public or private intelligence between the mother country and its American fettlements. From the want of this necessary institution, the operations of the flate, well as the business of individuals, were retarded or condufted unskilfully, and Spain often received from foreigners her fielt information with respect to very interesting events in her own colonies. But though this defect in police was fenfiby felt, and the remedy for it was obvious, that jenlous spirit with which the Spanish monarchs guarded the exclusive trade, refrained them from applying it. At length Charles III. furmounted those considerations which had deterred his predetellors, and in the year 1764 appointed packet-boots to be dipatched on the first day of each month from Corunna to the Havingah or Porto Rico. From thence letters are conveyed in fmaller veffels to Vera Cruz and Porto Bello, and transmitted by post through the kingdoms of Terra Firma, Granada, Peru and New-Spain. With no lets regularity packet-boats fail once in two months to Rio de la Plata, for the accommodation of the provinces to the east of the Andes. Thus provision is made for the speedy and certain circulation of intelligence throughout the valt dominions of Spain, from which equal advantages must redound to the political and mercantile interest of the kingdom. With this new arrangement, a scheme of extending commerce has been more immediately connected. Ech of the packet-boats, which are veffels of tome confiderable burden, is allowed to take in half a loading of fuch commodihies as are the product of Spain, and most in demand in the ports whither they are bound. In return for these they may bring home to Corunna an equal quantity of American produftions. This may be confidered as the first relaxations of departure. He releated them from the nufive duties imposed on goods exported to place of the whole subfituted a moderate hundred on the commodities sent from Southern to return either to the same port, or to they might hope for a more advantageous to enter the homeward cargo, on payment. This ample privilege, which at once broktences which the jealous policy of Spain has for two centuries and a half, to throw row intercourse with the new world, was soo to Louisiana, and to the provinces of a peachy.

Still, however, the commercial regulation respect to her colonies, are too rigid and a carried into complete execution. The legituade with impositions too heavy, or fetters too severe, descats its own intention, and is the inducements to violate its statutes, and premium to encourage illicit traffic. The S Europe and America, being circumscribed intercourse by the jealousy of the crown, o exactions, have their invention continually or to elude its edicts. The viglance and instance and instance of the colors of the colors of the colors.

to be defrauded, by various artifices, of more than one-half of the revenue which he ought to receive from America; and as log as it is the interest of so many persons to skreen those anacces from detection, the knowledge of them will never reach the throne.

Before we close this account of the Spanish trade in America, there remains one detached, but important branch of it, to be scationed. Soon after his accession to the throne, Philip II. larsed a scheme of planting a colony in the Philippine islands, which had been neglected fince the time of their discovery; and he accomplished it by means of an armament fitted out from New-Spain. Manilla, in the ifland of Luconia, was the fation thosen for the capital of this new establishment. From it in affive commercial intercourse began with the Chinese, and s confiderable number of that industrious people, allured by the prospect of gain, settled in the Philippine islands under the anish protection: they supplied the colony so amply with all me valuable productions and manufactures of the East, as enabled to open a trade with America, by a course of navigation the longest from land to land on our globe. In the infancy of this trade it was carried on with Callao, on the coast of Peru; but aperience having discovered the impropriety of fixing upon that as the port of communication with Manilla, the staple of the commerce between the east and west was removed from Callao to Acapulco, on the coast of New-Spain.

After various arrangements, it has been brought into a regalar form : one or two ships depart annually from Acapulco, which are permitted to carry out filver to the amount of five handred thousand pelos, but they have hardly any thing else of tilue on board; in return for which, they bring back spices, drugs, china and japan wares, callcoes, chintz, muslins, filks, and every precious article, with which the benignity of the clime, or the ingenuity of its people, has enabled the East to supply the rest of the world. For some time the merchants of Peru were admitted to participate in this traffic, and might fend maually a thip to Acapulco to wait the arrival of the veffels from Manilla, and receive a proportional share of the commodries which they imported. At length, the Peruvians were excluded from this trade by most rigorous edicts, and all the commodities from the East reserved solely for the consumption of New-Spain.

In consequence of this indulgence, the inhabitants of that

are poured into the markets of New-2 arrives at Vera Cruz from Europe, it the people already supplied by cheal commodities.

There is not, in the commercial arra circumstance more inexplicable than the between New-Spain and the Philippines its fundamental maxim of holding the co - pendence on the mother country, by prol intercourse that might suggest to them t supply of their wants from any other qua must appear still more extraordinary, i Spain Erself carries on no direct trade v the Philippines, and grants a privilege to colonies, which she denies to her subjet probable, that the colonists who original the Philippines, having been sent out from this intercourse with a country which some measure, as their parent state, before was aware of its consequences, or could a order to prevent it. Many remonstrances "sgainst this trade, as detrimental to Spai another channel a large portion of that tr "flow into the kingdom, as tend!

PORTUGUESE SETTLEMENTS

1 N

SOUTH-AMERICA.

BRASIL.

LHIS territory is fituated between the equator and 35° fouth latitude, and 60° west longitude; it is about one thousand five landred and fixty miles in length, and one thousand in breadth; but, measuring along the coast, it is two thousand miles long, and is bordered with mountains that open from time to time, and form good harbours where vessels may lie in safety.

It is bounded by the mouth of the river Amazon and the Atlantic ocean on the north; and by the same ocean on the set; on the south by the river Plata; on the west by morasses, been, torrents, rivers, and mountains, which separate it from Amazonia and the Spanish possessions. On the coast are three seal islands, where ships touch for provisions on their voyage the South seas, viz. Fernando, St. Barbaro and St. Catherine's.

It was accidentally discovered by the Portuguese in 1500. Install, king of Portugal, had equipped a squadron of thirtia sail, carrying twelve hundred soldiers and sailors destined for the East-Indies, under the conduct of Peter Alvarez Cabral. This admiral, quitting Lisbon on the 9th of March 1500, struck to sea to avoid the coast of Guinea, and steered his course such as the might the more easily turn the cape of Good stabbanerica, which he judged to be a large island at some stabbanerica, which he judged to be a large island at some stabbanerica, which he judged to be a large island at some stabbanerica, which he judged to be a large island at some stabbanerica to send a boat on shore, and was associated to conserve the inhabitants entirely different from the Africans,

in scatures, hair and complexion. It was found, however, impracticable to seize upon any of the Indians, who retird with great celerity to the mountains on the approach of the Portuguese; yet, as the failors had discovered a good harour, the admiral thought proper to come to an anchor, and called the bay Puerto Seguro. Next day he sent another boat on shore, and had the good fortune to lay hold on two of the natives, whom he clothed and treated kindly, and then dismissed to make a proper report to their countrymen. The strategies had the desired effect. The Indians, having heard the relation of the prisoners, immediately crowded to the shore, singing dancing, and sounding horns of different kinds; which induced Cabral to land, and take solemn possession in the name of his Portuguese majesty.

As foon as the court of Lifbon had ordered a furvey to be taken of the harbours, bays, rivers and coasts of Brahl, and was convinced that the country afforded neither gold nor filter, they held it in such contempt, that they sent thither none but condemned criminals and abandoned women. Two ships were sent every year from Portugal, to carry the resuse of the kingdom to this new world, and to bring home parrots, and woods for the dyers and cabinet-makers. Ginger was afterwards added, but soon after prohibited, lest it should interfere with the sale of the same article from India.

In 1548, the Jews, many of whom had taken refuge in Portugal, beginning to be perfecuted by the inquisition, were stripped of their possessions, and banished to Brasil. Here, however, they were not entirely forfaken: many of them found kind relations and faithful friends; others, who were known to be men of probity and understanding, obtained money in advance from merchants of different nations, with whom they had formerly had transactions. By the affishance of some enterprifing men they were enabled to cultivate fugar-canes, which they first procured from the island of Madeira. Sugar, which till then had been used only in medicine, became an article of luxury; princes and great men were all eager to procure themfelves this new species of indulgence. This circumstance proved favourable to Brafil, and enabled it to extend its fugar plantations. The court of Lifbon, notwithstanding its prejudices, began to be fenfible, that a colony might be beneficial to the mother country, without producing gold or filver; and this fettlement, v been wholly left to the management of the colomists, ight to deferve fome kind of attention; and ac

endingly! Thomas de Souza was sent thither, in 1549, to re-

This able governor began by reducing these men, who had always lived in a state of anarchy, into proper subordination, and bringing their scattered plantations closer together; after which he applied himself to acquire some information respectmethe natives, with whom he knew he must be necessarily estaiged either in traffic or war. This it was no easy matter traccomplish. Brasil was full of small nations, some of which inhabited the forests, and others lived in the plains and along the rivers: some had settled habitations, but the greater numbes of them led a roving life, and most of them had no intercourse with each other. It is not to be supposed, that such a people would be at all disposed to submit to the yoke which the Portuguese wanted to put upon them. At first they only declined all intercourse with these strangers; but finding themselves pursued in order to be made slaves, and to be employed in the labours of the field, they took the resolution to murder and devour all the Europeans they could seize upon. The friends and relations of the savages that were taken prisoners allo ventured to make frequent attempts to rescue them, were fometimes successful; so that the Portuguese were feeced to attend to the double employments of labour and WAT.

Souza, by building San Salvador, gave a center to the colony; but the honour of fettling, extending, and making it really useful to the mother country, was reserved for the Mais who attended him. These men, who for their arts of anstion and address have been equalled by none, dispersed melves among the Indians. When any of the missionaries were murdered, they were immediately replaced by others; feeming to be inspired only with sentiments of peace and charity, the Indians, in process of time, grew not only funifier but passionately fund of them. As the missionaries yere too few in number to transact all the business themselves. they frequently deputed some of the most intelligent Indians in their stead. These men, having distributed hatchets, baives, and looking-glasses, among the savages they met with, presented the Portuguese as a harmless, humane, and good lent of people.

The prosperity of the colony of Brasil, which was visible to all Europe, excited the envy of the French, Spaniards and Durch successively: the latter, indeed, bid fairest for the conquest of the whole; their admiral Henry Lonk arrived, in the

beginning of the year 1630, with forty-fix men w war; on the coast of Fernambucca, one of the largest and best foreified eaptainships of these parts. He reduced it after several obstance engagements, in which the was always victorious. The acceptant he lest behind subdued the captainships of Termaraca, Pareibe, and Rio Grande, in the years 1633, 1634, and 1635. Thefe, as well as Fernambucca, furnished annually a large quantity of fugar, a great deal of wood for dying, and other commodition; The Hollanders were so elated with the acquisition of this wealth, which flowed to Amsterdam instead of Lisbon, that they determined to conquer all the Brahls, and intrusted Mrsrice of Nallau with the conduct of this enterprise. That general reached the place of his destination in the beginning of the year 1637: he found the foldiers to well disciplined, the come manders such experienced men, and so much readiness in all: to engage, that he directly took the field. He was successively oppoied by Albuquerque, Banjola, Lewis Rocca de Borgiajt and the Brahlian Cameron, the idol of his people, patterns ately fond of the l'ortuguele, brave, active, cunning, and whole wanted no qualification necessary for a general, but to have learned the art of war under able commanders. These severals chiels exerted their utmost essorts to defend the possessions that were under their protection; but their endeavours proved inessectual. The Dutch seized upon the captainships of Siarre Scregippe, and the greater part of that of Bahia. Seven of the fifteen provinces which composed the colony had already submitted to them, and they stattered themselves that one of two campaigns would make them mafters of the rest of theif enemics possessions in that part of America, when they were fuddenly checked by the revolution happening on the banish ment of Philip IV. and placing the duke of Braganza on the throne. After this, the Portuguese recovering their spirits. foon drove the Dutch out of Brafil, and have continued matters of it ever fince.

The country of Brasil is divided into the following provinces, or captainships, as they are called, viz. Paria, Maragnanos Siara, Rio Grande, Pareiba, Tamarica, Fernambucca, Seregip pr., Bahia, Porto Seguro, Esperito Santo, Rio de Janeiro, Aisgra, St. Vincent, and Del Rey.

The harbours of Brasil are Panambuco, All Saints, Rio Jameiro, the port of St. Vincent, the harbour of Gabriel, and the port of St. Salvador; and with respect to rivers, there are a great number of noble streams, which unite with the rivers Amazon and Plata, besides others which fall into the Atlantic ocean.

The climite of Brafil his been deferibed by two eminent mundins, Pilo and Margrave, who observed it with a philoliphical accuracy, to be temperate and mild, when compared win that of Africa; they alcribe this chiefly to the refreshing wind which blows continually from the fee. The air is not saly cool, but chilly through the night, fo that the natives bodie a fire every evening in their huts. As the rivers in this toucky annually overflow their banks, and leave a fort of flime toes the lands, the foil here must be in many places amazingly rich; and this corresponds with the best information upon the bed. The vegetable productions are Indian corn, fugar times, tobacco, indigo, hides, ipecacuana, balfam, Brafit wood, which is af a red colour, hard and dry, and is chiefly used in cying, but not the red of the best kind. Here is also the yellow fuffic, of use in dying yellow, and a beautiful piece of tackled wood, made use of in cabinet work. Here are five different forts of polin trees, some curious ebony, and a great tuitty of cotton trees. This country abounds in horned tusle, which are hunted for their hides only, twenty thousand fent annually into Europe. There is also a plenty of dens, hares, and other game. Amongst the wild beasts found bee, are tigers, porcupines, janouverss, and a fierce animal, Locwhat like a greyhound; monkeys, floths, and the topimion, and a creature between a bull and an ais, but without bens, and entirely harmless, the flesh is very good, and has the favour of beef. There is a numberless variety of fowl, wild and tame, in this country; among these are turkeys, fine while hens and ducks. The remarkable birds are the humming bid; the lankima, fometimes called the unicorn bird, from its lung a horn, two or three inches long, growing out of its behead; the guira, famous for often changing its colour, being black, then ash-coloured, next white, afterwards tearlet, a last of all crimson: which colours grow richer and deeper elonger the bird lives. Among the abundance of fish with * the feas, lakes, and rivers of this country are flored, is be globe fish, so called from its form, which is so befet with roca like a hedgehog, that it bids defiance to all fish of prey. the most remarkable creature is the fea bladder, fo called traufe it greatly refembles one, and fwims on the furface of waves; the infide is filled with air, except a finall quantity water, that ferves to poile it. The fkin is very thin and beforent, and like a bubble railed in the water reflects all the ours of the fky. Brafil breeds a great variety of ferpents venomous creatures, among which are the Indian falamander, a four-legged infest, the sting of which is mortal; the ibivaboca, a species of serpent, about seven yards long, in half a yard in circumference, whose posson is instantaneously fatal; the rattle-snake, which there attains an enormous sing the liboyd, or roe-buck snake, which authors inform or at capable of swallowing a roe-buck whole with his horns, being between twenty and thirty feet in length, and two yards in circumference. Besides those, there are many other unless me serpents of a dangerous and venomous nature.

The gold and diamond mines are but a recent discovery they were first opened in the year 1681, and have fince we ed above five millions sterling annually, of which sum a fit belongs to the crown. So plentiful are diamonds in this coun try, that the court of Portugal has found it necessary to refin their importation, to prevent too great a dimunition of the value. They are neither so hard nor so clear as those of the Esst-Indies, nor do they sparkle so much, but they are white The Brafilian diamonds are fold ten per cent, cheaper than the Oriental ones, supposing the weights to be equal. The lan diamond in the world was fent from Brafil to the king Portugal; it weighs one thousand fix hundred and e carats, or twelve ounces and a half, and has been value fixty-fix millions feven hundred and eighty-feven thoula five hundred pounds. Some skilful lapidaries, however a of opinion that this supposed diamond is only a topse, which case a very great abatement must be made in its val The crown revenue arising from this colony amounts to two millions sterling in gold, if we may credit some late writers, be fides the duties and customs on merchandife imported from the quarter. This, indeed, is more than a fifth of the precise metal produced by the mines, but every other confequent ad vantage confidered, it probably does not much exceed the truth

The extraction of gold is neither very laborious nor diagnous in Brafil. It is sometimes on the surface of the soil, and this is the purest kind, and at other times it is necessary to dig for it eighteen or twenty seet, but seldom lower. It is some in larger pieces upon the mountains and barren rocks than in the valleys, or on the borders of the river. Every man who discovers a mine, must give notice of it to the government. If the vein be thought of little consequence by persons appointed to examine it, it is always given up to the public; if it has declared to be a rich vein, the government reserve a portion of it to themselves; another share is given to the commandant, and two shares are secured to the discontinuous.

. :

The miners are obliged to deliver to the king of Portugal h part of all the gold which is extrafted.

. Salvador is the capital of Rafil. This city has a nable, one and commedians harbour, is built on a high and fleep having the fea upon one fide, and a lake forming a creicent cother. The fittation makes it in a manner impropulse ture, and the Partogacte have befides added to it very fortifications; it is populous, magnificent, and beyond arifon the most gay and equient in all Brafil.

etrade of Brail is very great, and increases every year. Portuguese have opportunities of supplying themselves with a for their several works, at a much cheaper rate than any r European power that has fettlements in Ame ico, they the only European nation that has established colonies in a, from whence they import as many as forty thousand es annually.

texcessive confluence of people to the Brafil colonies, is from other countries as from Portugal, not only enlarges aports of gold, diamonds, fugar, tobacco, hides, drugs and rines, but what is of infinitely more importance to Europe neral, the expertation of the manufictures of this hamifs of which the principal are the following: Great-Britain woollen manufactures, such as fine broad medley clotler, fine th cloths, fearlet and black cloths, forges, duroys, druggets, iles, shalloons, camblets, and Morwich shaffs, black Coltr bays, fays, and perpetuanas, called long ells, hats, flockand gloves. Holland, Germany, and France, chiefly exine hollands, bene her, and fine thread; filk manufratures, ir, lead, block till, and other articles, are 1.0 fent from ent colonies. Belisles the particulars already specified, and likewife trades with Portugal, for the ute of the Brailly, pper and brafs, wrought and unwrought pewier, and all of bardware; all which artishs have to enlarge I the Pig-Carried a chair to Break the color of the color of the contract of the

january; the fleet to Bahia, or bruary; and the third ficet, to March.

The native Brasilians are abou not so flour. They are subject to lived. They wear no cloathing; tremely long, the men cut their's lets of bones of a beautiful wh some; the women paint their fac-The food of the Brafilians is very fish by the sea side, along the rive by hunting; and when these fail other roots. They are extremel amusements, and these amusement worship of a Supreme Being, for nor is their tranquillity disturbed of which they have no idea. The cians, who, by ftrange contoutions dulity of the people, as to throw If the impostures of these magicia mediately put to death, which fer the spirit of deceit. Every Brasii chooses, and puts them away when the women lie in, they keep their the mother, hanging the of the st

natives, before they were corrupted by an intercourse with the Europeana.

With respect to the religion of Brasil, though the king of Portugal, as grand mafter of the order of Christ, is felely in poffellon of the titles; and though the produce of the crusade belogs entirely to him, yet in this extensive country, fix bishoptio have been fuccessively founded, which acknowledge for their superior the archbishop of Bohia, established in the year 1352. The fortunate prelates, most of them Europeans, who fill these honourable sees, live in a very commodious manner, upon the emoluments attached to the function of their ministry, and upon a pension of from fifty to one thousand two hundred and ally pounds per ann, granted to them by the government. Among the inferior clergy, none but the missionaries who are fortled in the Indian villages are paid, but the others find fufficient resources in the superstition of the people. Besides an annual tribute paid by every family to the clergyman, he is antilled to two fhillings for every birth, for every wedding, and terry burial. Though there is not absolutely an inquisition in * Bafil, yet the people of that country are not protected from the outnges of that barbarous and infernal institution.

The government of Brasil is in the viceroy, who has two councils, one for criminal, the other for civil affairs, in both of which he presides; but there is no part of the world where the lawyers are more corrupt, or the chicanery of their profession more practised.

Only half of the captainships, into which this country is divided, belong to the crown, the rest being siefs made over to some of the nobility, in reward of their extraordinary services, who do little more than acknowledge the sovereignty of the king of Portugal.

SOUTH-AMERICA.

CAYEN,NE.

"YENNE is bounded north and cast, by the Atlantic ocean is, by the Amazonia; and west, by Guina, or Surinam. Is attends two hundred and forty nales along the coast of Guiana and nearly three hundred in less within land, lying between the equator and the 5th degree of north latitude.

The lend along the coaft is low, and very fubject to inundations during the roiny featons, from the multitude of rivers such rafit down from the mountains with great impetuofity. Here the atmosphere is very hot, moift and unwholedome, especially where the woods are not cleared a vay; but on the higher parts where the trees are cut down, and the ground laid out in plantations, the air is more healthy, and the heat great, mitigated by the sea breezes. The foil in many parts is very fertile, producing loger, tobacco, Indian corn, fruits, and other necessaries of late.

The French have taken pelicolom of an iffind upon this coaft, a flexible Cayerne. This fettler int was regain in 1635. A report had prevented for fome time before, that in the interior parts of Gana, there was a country brown by the name of del Darado, which contained immente riches an gold and precious flows, more than ever Cortes and Peterro had found in Mexico and Pero, and this finde had fined the inequation of my nation in Europe. It is imposted that this was the commutated of which Su Walter Poleigh what on loss taken ages.

as the French were not behind their neighbours in their avours to find out fo defirable a country, fome attempts for purpose were likewise made by that nation much about the time, which at last coming to nothing, the adventurers up their residence on the island of Cayenne. In 1643, merchants of Rouen united their stock, with a defign pport the new colony, but committing their affairs to one ca de Bretigny, a man of a ferocious disposition, he deed war both against the colonists and savages, in consequence which he was foon maffacred. This catastrophe entirely excolled the ardour of these associates; and in 1651 a new yany was established. This promised to be much more conendle than the former; and they fet out with fuch a capital as illed them to collect feven or eight hundred colonists in the of Paris itself. These embarked on the Seine in order to down to Havre de Grace, but unfortunately the Abbé de the undertaking, was drowned as he was stepping into his . Another gentleman who was to have afted as general, saffaffinated on his paffage; and twelve of the principal caturers who had promifed to put the colony into a flouung fituation, not only were the principal perpetrators of ad, but uniformly behaved in the fame atrocious manner. hit they hanged one of their own number, two died, three se banished to a desert island, and the rest abandoned themes to every kind of excels. The commandant of the del deferted to the Datch with part of his garrison. The ages, roused by numberless provocations, fell upon the renoder; fo that the few who were left, thought themselves my in escaping to the Leeward islands in a boat and two no, shandoning the fort, ammunition, arms, and merchanfifteen months after they had landed on the island,

In 1603, a new company was formed, whose capital amountonly to eight thousand seven hundred and sifty pounds.
The effishance of the ministry they expelled the Dutch, who
daken possession of the island, and settled themselves much
at comfortable than their predecessors. In 1667, the island
is taken by the English, and in 1676 by the Dutch, but
erwinds restored to the French, and since that time has never
in attacked. Soon after, some pirates, laden with the spoils
by had gathered in the South seas, came and fixed their
space at Cayenne, resolving to employ the treasures they
disquired in the cultivation of the lands. In 1688, Ducasse,
the learner, arrived with some ships from France, and

By a particular formation, uncommon in highest near the water side, and low in the land is so full of morasses, that all conthe different parts of it is impossible, we circuit. There are some small tracts of a found here and there; but the generality soon exhausted. The only town in the col covert way, a large ditch, a very good m bastions. In the middle of the town is eminence, of which a redoubt has been mastort. The entrance into the harbour is through, and ships can only get in at low water and reefs that are scattered about this pass.

The first produce of Cayenne was the produce of which, the colonists proceeded indigo, and lastly, sugar. It was the first colonies that attempted to cultivate coffee was brought from Surinam in 1721, by sc Cayenne, who purchased their pardon by twelve years after they planted cocoa; w account of the produce with respect to quant as the year 1752, there were exported from dred and fixty thousand five hundred and f arnotto, eighty thousand three hundred and of sugar, seventeen thousand nine hundred and

SURINAM, OR DUTCH GUIANA.

THIS province, the only one belonging to the Dutch on the continent of America, is fituated between 5° and 7° north thinde, having the mouth of the Oronoko and the Atlantic, on the north; Cayenne, on the east; Amazonia, on the south; and Terra Firma on the west.

The Dutch claim the whole coast from the mouth of Oropake to the river Marowyne, on which are situated their colonies of Essequibo, Demerara, Berbice, and Surinam. The presence of the property of the state of th

A number of fine rivers pass through this country, the principal of which are Essequibo, Surinam, Demerara, Berbice, Conya. Essequibo is nine miles wide at its mouth, and more than three hundred miles in length. Surinam is a stifful river, three quarters of a mile wide, navigable for largest vessels four leagues, and for smaller vessels fixty or seventy miles farther. Its banks, quite to the water's edge, are wered with evergreen mangrove trees, which render the singe up this river very delightful. The Demerara is about three quarters of a mile wide where it empties into the Surinam is navigable for large vessels one hundred miles; a hundred

dred miles farther are feveral falls of easy ascent, above wit divides into the south-west and south-east branches,

The water of the lower parts in the river is brackith, unfit for use; and the inhabitants are obliged to make us rain water, which is here uncommonly sweet and good, caught in eitherns placed under ground, and before drinking set in large earthen pots to settle, by which means it becovery clear and wholesome. These cisterns are so large numerous, that water is seldom scarce.

In the me
climate is un

air, where a fithe fea coaft.
The thermonicous r

October, and November, ly to strangers. The commercers, the dry belly-ach, es back from the sea, the ntry, a pure, dry, wholes ould not be disagreeable. All esome, the air damp and sale 75° to 90° through the years.

A north-east breeze never fails to blow from about nine o'd in the morning through the day, in the hottest seasons, the days and nights throughout the year are very nearly an equal length, the air can never become extremely heat nor the inhabitants so greatly incommoded by the heat, those who live at a greater distince from the equator. I seasons were formerly divided regularly into rainy and d but of late years so much dependence cannot be placed up them, owing probably to the country's being more clear by which means a free passage is opened for the air a vanours.

3

Through the whole country runs a ridge of cyfler fler nearly parallel to the coast, but three or four leagues from of a confiderable breadth, and from four to eight feet de compeled of fheils exocity of the same nature as those wh form the present coast: from this and other circumstant there is great reason to believe that the land, from that distribution in each, is all new land, rescued from the water by se revolution in nature, or other unknown cause.

On each fide of the rivers and creeks are fitnated the platitions, containing from five hundred to two thousand accase, in number about five hundred and fifty in the wholl it, producing at prefent annually about fixteen thousally about fixteen thousand pounds of cotton; all which articles, cotton excepts

have fallen off within fifteen years, at least one third, owing to bid management, both here and in Holland, and to other crufes. Of the proprietors of these plantations, not above eighty relide here. The fugar plantations have many of them water mills, which being much more profitable than others, and the fituation of the colony admitting of them, will probamy become general; of the rest, some are worked by mules, when by cattle, but from the lownels of the country none by the wind. The estates are for the greatest part mortgaged for u suck or more than they are worth, which greatly discounges my improvements which might otherwife be made. Was t me for the unfortunate fituation of the colony in this and other respects, it is certainly capable of being brought to a great height of improvement; dyes, gums, oils, plants for wond purpoles, &c. might, and undoubtedly will, at some future period, be found in abundance. Rum might be diftiled here; indigo, ginger, rice and tobacco, have been, and may be further cultivated, and many other articles. In the woods are found many kinds of good and durable timber, and fome woods for ornamental purposes, particularly a kind of minogany called copic. The foil is perhaps as rich and as Inxuriant as any in the world; it is generally a rich, fat, loamy eath, lying in some places above the level of the rivers at high witer, which rife about eight feet, but in most places below it. Whenever, from a continued course of cultivation for many Years, a piece of land becomes impoverished, for manure is not anown here, it is laid under water for a certain number of yun, and thereby regains its fertility, and in the mean time a The piece of wood land is cleared. This country has never experienced those dreadful scourages of the West-Indies, hurricames and droughts; from the lowness of the land it has not to fear, nor has the produce ever been destroyed by infects or by the blaft. In thort, this colony, by proper management, might become equal to Jamaica, or any other. Land is not wanting; it is finely interfected by noble rivers, and abundant steeks; the foil is of the best kind; it is well fituated, and the climate is not very unhealthy: it is certainly growing leter, and will continue so to do, the more the country is dered of its woods, and cultivated.

The rivers abound with fish, some of which are good; at certia testons of the year there is plenty of turtle. The woods abound with plenty of deer, hares, and rabbits, a kind of buffa218

loe, and two species of wild hogs, one of which, the peccar is remarkable for having its navel on the back.

The woods are infested with several species of tigers, but wi no other ravenous or dangerous animals. The rivers are re dered dangerous by alligators, from four to leven feet long, and man was a fhort time fince crushed between the jaws of a fill but its name is not known. Scorpions and tarantulas are for here of a large fize and great venom, and other infects with number, some of their very dangerous and troublesome. Paramaribo, fitu ies, north latitude the principal town in Surinam. It contains about two thouland

whites, one half of whom are Jews, and eight thousand slaves The houses are principally of wood, some few have glass windows, but generally they have wooden shutters. The streets at spacious and straight, and planted on each fide with orange of

tamarind trees.

About icventy miles from the sea, on the same river, is t village of about forty or fifty houles, inhabited by Jews. Thi village, and the town above mentioned, with the intervening plantations, contain all the inhabitants in this colony, which amount to three thousand two hundred whites, and forty-three thousand flaves. The buildings on the plantations are many of them costily, convenient, and airy. The country around is thir Iv inhabited with the native Indians, a harmless friendly raced beings. They are, in general, short of stature, but remarkable well made, of a light copper colour, fliaight black hair, withou beards, high check bones, and broad fhoulders. In their ear nofes, and hair the women wear ornaments of filver, &c. Bot men and women go naked. One nation or tribe of them t the lower part of the legs of the female children, when youn, with a cord bound very tight for the breadth of fix inches about the encle, which cord is never afterwards taken off but to pl on a new end, by which means the field, which should otherwi grew on that part of the leg, increales the calf to a great fiz and leaves the bone below nearly bare. This, though it mu ander them very weak, is reckoned a great beauty by them

The language of the Indians appears to be very foft. They are mortal enemies to every kind of labour, but nevertheless manufacture a few articles, such as very fine cotton hammorks, carthen water pots, baskets, a red or yellow dye called rouceu, and some other trifles, all which they exchange for such articles as they stand in need of.

They paint themselves red, and some are curiously signred with black. Their food consists chiesly of fish and crabs; and tasks, of which they plant great quantities, and this is almost the only produce they attend to. They cannot be said to be be bloutely wandering tribes, but their huts being merely a few cross sticks covered with branches, so as to defend them from the rain and sun, they frequently quit their habitations, if they see occasion, and establish them elsewhere. They do not shure the whites, and have been serviceable against the runaway negroes.

Dr. Bancroft observes, that the inhabitants of Dutch Guiana to either whites, blacks, or the reddish brown aboriginal native. The promiscuous intercourse of these different people are generated several intermediate casts, whose colours depend on their degree of confanguinity to either whites, blacks, negrees, or Indians,

The river Surinam is guarded by a fort and two redoubts at ficentrance, and a fort at Paramaribo, but none of them of any stength, so that one or two frigates would be inflicient to make themselves masters of the whole colony, and never was there a people who more ardently wished for a change of government can the inhabitants of this colony do at this time. The many pievances they labour under, and the IMMANSE BURTHEN OF TAXES, which threaten the ruin of the colony, make them existable in their general desire to change the Dutch for a French preriment. This is precisely the case in Europe, the taxes the following and the oppression of the Statholectian government so great, that we may venture to affert, that no human lower (and we cannot think a Divine one will interfere) can possibly prevent much longer a revolution from taking place.

The colony is not immediately under the States General, but hader a company in Holland, called the Directors of Surinam, recompany first formed by the States General, but now supplying its own vacancies; by them are appointed the governor and the principal officers both civil and military. The interior forment consists of a governor, and a supreme and inferior spaces; the members of the latter are choicen by the governor.

from a double nomination of the principal inhabitants, and those of the former in the lame manner. By these powers, and by a magistrate presiding over all criminal affairs, justice is executed, and laws are enacted necessary for the interior government of the colony; those of a more general and public naturare enacted by the directors, and require no approbation by the court.

The colony is guarded by about one thousand fix hundre regular troops, paid by the directors. These troops, together with a corps of about two hundred and fifty free negroes, pai by the Dutch other fmall corps of chaffeur and as many 1 thinks fit to order from the planters, from tr ispersed at posts placed at pro per distances on a ro anding the colony on the lan defend the distant plantation fide, in order, as f and the colony in he attacks of feveral dangero from very small beginning bands of run have, from th sy of the negro race, and i 201 continual addition of fresh fugitives, arrived at such a heig as to have cost the country very great sums of money, an much loss of men, without being able to do these negroes an cilettual injury.

The coupy was first possessed by the French as early as the year 16 to or 40, and was abandoned by them on account of a united by climate. In the year 1650 it was taken by some Englishmen, and in 1662 a charter grant was made of ith Chirles II. About this time it was considerably augmented to the settlement of a number of Jews, who had been driven of Cayetine and the Brasils, whose descendants, with oth jows, compose at present one half of the white inhabitants the colony, and are allowed great privileges. In 1667 it was here by the Dutch, and the English having got possession about the tame time of the then Dutch colony of New-York, early retained its conquest; the English planters most of the ratified to J mica, leaving their shaes behind them, whose last the first love in English, but so corrupted as not to be understo as first love in Englishman.

ABORIGINAL AMERICA,

OR THAT PART WHICH

THE ABORIGINAL INDIANS POSSESS.

AMAZONIA.

AMAZONIA is fituated between the equator and 20° fouth himsele; its length is one thousand four hundred miles, and its breadth nine hundred miles: it is bounded on the north by Terra Firma and Guiana; on the east by Brasil; on the south by Paraguay; and on the west by Peru.

The air is cooler in this country than could be expected, confidering it is fituated in the torrid zone. This is partly ewing to the heavy rains which occasion the rivers to overflow their banks one-half of the year, and partly to the cloudiness of the weather, which obscures the sun great part of the time the is above the horizon. During the rainy seaton the country is subject to dreadful storms of thunder and lightning.

The foil is extremely fertile, producing cocoa nuts, pine sples, bananas, plantains, and a great variety of tropical fauits; cedar, redwood, pak, ebony, logwood, and many other pris of dying wood; together with tobacco, fugar canes, cetton, potatoes, balfam, honey, &c. The woods abound with tigers, wild boars, buffaloes, deer, and game of various kinds. The rivers and lakes abound with fish. Here are also sea-cows and turtles; but the crocodiles and water serpents render fishing a dangerous employment.

The river Amazon is the largest in the known world. This river, so famous for the length of its course, this great vasfal of the sea, to which it brings the tribute it has received from many of its own tributaries, seems to be produced by innumerable torrents, which rush down with amazing impetuosity than the eastern declivity of the Andes, and unite in a spa-

1

cious plain to form this immense river. In its progress three thousand three hundred miles it receives the waters of prodigious number of rivers, some of which come from some and are very broad and deep. It is interspersed with an insimumber of islands, which are too often overslowed to admit culture; it falls into the Atlantic ocean under the equator, as is there one hundred and fifty miles broad.

The natives of this country, like all the other American are of a good stature, have handsome features, long black hi and copper complexions. They are faid to have a taffe for t init's imitative arts, and sculpture, and make go mechanics. Tuess de of the barks of trees, a their fails of cotton, marchets of tortoile shells or be stones, their chifels, puns a 1 wimbles, of the horns a teeth of wild beafts, and their c soes are trees hollowed. The fpin and weave cotton cloth, ld their houses with wood a clay, and thatch them wi ds, Their arms in general a darts and javelins, bows ... rrows, with targets of cane fish skins. The several nations are governed by their chiefs caziques; it being observable, that the monarchial form of g vernment has prevailed almost universally, both among ancie and modern barbarians, doubtless on account of its superic advantages with respect to war and rapine, and as requiring much less refined policy than the republican system, and ther fore best adapted for the savage state. The regalia, which di tinguish the chiefs, are a crown of parrots feathers, a chi of tygers teeth or claws, which hangs round the waift, and wooden fword, which, according to fome authors, were in tended for hieroglyphics.

As early as the time of Hercules and Theseus, the Greel had imagined the existence of a nation of Amazons; with the fable they embellished the history of all their heroes, not excepting that of Alexander; and the Spaniards, infatuated withins dream of antiquity, transferred it to America. The reported, that a republic of semale warriors assually existed in America, who did not live in society with men, and only admitted them once a year for the purposes of procreation. I give the more credit to this romantic story, it was reported not without reason, that the women in America were all I unhappy, and were treated with such contempt and inhumant by the men, that many of them had agreed to shake off the yorke of their tyrants. It was further said, that being accumend to follow the men into the forests, and to carry the

they must necessarily have been inured to hardships, ndered capable of forming so bold a resolution. Since my has been propagated, infinite pains have been taken I out the trath of it, but no traces could ever be red.

mind of a good man is pleased with the restection, ty part of South-America has escaped the ravages of can tyrants. This country has hitherto remained und; the original inhabitants, therefore, enjoy their native a and independence, the birthright of every human

PATAGONIA is fituated between 35° and 54° fouth l tude its length is eleven hundred miles, and its breadth th north by Chili and Parag hundred and fifeast by the A th by the straits of Magella west by the Par ich colder in this country th

The climate is faid to 1. in the north under the imputed to the Andes, whi with cternal fnow: it is ale would produce, as it is n The northern parts are covered with wood, among which an inexhaustible fund of large timber; but towards the four

arallels of latitude, which als through it, being cove impossible to say what the ill cultivated by the nativ

it is faid, there is not a fingle tree large enough to be use to mechanics. There are, however, good pastures, wh feed incredible numbers of horned cattle and horles first c ried there by the Spaniards, and now increased in an amaz degree.

It is inhabited by a variety of Indian tribes, among wh are the Patagons, from whom the country takes its name, Pampas and the Coffores: they all live upon fish and gas and what the earth produces spontaneously: their huts thatched, and, notwithstanding the rigour of the climate, the wear no other clothes than amantle made of feal skin, or fkin of some beast, and that they throw off when they in action: they are exceedingly hardy, brave and active, m ing use of their arms, which are bows and arrows headed w flints, with amizing dexterity.

Magellan, who first discovered the straits which bear name, and after him Commodore Byron, have reported, t there exists, in these regions, a race of giants; but oth who have failed this way contradict the report. Upon whole we may conclude, that this flory is, perhaps, like t of the female republic of Amizons.

The Spiniards once bailt a fort upon the straits, and let garrifor in it to prevent any other European nation paf that way into the Pacific occur; but most of the men peril by bonger, whence the place obtained the name of port Famine, and fince that fatal event, no nation has attempted to plant colonia in Paragonia. As to the religion or government of these favges, we have no certain information: fome have reported, the these people believe in invisible powers, both good and evil; and that they pay a tribute of gratitude to the one, and deprecate the wrath and vengeance of the other.

GENERAL OBSERVATIONS.

We have now traverfed the several provinces of that extenfive region, which is comprehended between the isthmus of Dates and the fifty-fourth degree of fouth latitude. We have taken a curfory view of the rivers, the foil, the climate, the productions, the commerce, the inhabitants, &c.

The hillory of Columbus, together with his bold and adven-"smus altions in the discovery of this country, we have but Digitly noticed in this account, as we had done this in a precoding part of this work,* His elevated mind fuggefted to him adeas superior to any other man of his age, and his aspiring gemiss prompted him to make greater and more noble efforts for Dew discoveries : he crossed the extensive Atlantic, and brought so view a world unheard of by the people of the ancient hemphere. This excited an enterprifing, avaricious, spirit among the inhabitants of Europe; and they flocked to America for the Purposes of plunder. In consequence of which, a scene of barbenty has been acted, of which South-America has been the Principal theatre, which shocks the human mind, and almost stag-Bers belief. No fooner had the Spaniards fet foot upon the merican continent, than they laid claim to the foil, to the mines, and to the fervices of the natives, wherever they came. Countries were invaded, kingdoms were overturned, innocence was attacked, and happiness had no asylum. Despotism and Stucky, with all their terrible feourges, attended their advances to every part : they went forth, they conquered, they ravaged, they dellroyed : no deceit, no crucky, was too great to be made whe of to fatisfy their avarice: justice was difregarded, and mercy formed no part of the character of these inhuman conquerors : they were intent only on the prolecution of tchemes woll degrading and most scandalous to the human character. In South-America, the kingdoms of Terra Firms, of Peru, of Chill, of Paragua, of Brafil, and of Guiana, fuccessively fell a facrifice their vicious ambition and avarice. The history of their

OF THE

WEST-INDIA ISLANDS.

The walt continent of America is divided into two parts.

Note and South, the narrow isthmus of Darien serving as a link to connect them together; between the Florida shore on the nothern peninsula, and the gulf of Maracabo on the southern, lie a multitude of islands, which are called the West-Indies, from the name of India, originally assigned to them by Columbus; though, in consequence of the opinions of some geographers of the fifteenth century, they are frequently known by the appellation of Antilia or Antilles: this term is, however, more often applied to the windward or Caribbean islands.

Subordinate to this comprehensive and simple arrangement, recessive or convenience has introduced more local distinctions:

That portion of the Atlantic which is separated from the main can to the north and east by the islands, though known the general appellation of the Mexican gulf, is ittelf roperly divided into three distinct parts; the gulf of Mexican that class of islands which bound this part of the ocean the east. Of this class, a group nearly adjoining to the stem side of St. John de Porto Rico is lakewise called the argunishes.* The name of Bahama islands is lakewise given, or

It may be proper to observe, that the old Spanish navigators, in speaking of the West-India islands, frequently distinguish them into two classes, by the terms Barloscato and Sostavento, from whence our Windward and Leeward islands, the Carabbean constituting, in strict propriety, the former class, and the stands of Cuba, Jamaico, Hilpaniola and Porto Rico the latter; but the Insish marines appropriate both terms to the Carabbean islands only, substanding them according to their fituation in the course of trade; the Windward islands, by their arrangement, terminating, I believe, with Martinico, and the Leeward commencing at Dominica and extending to Porto Rico. 1.4-2014 Hist. Vol. 1 p. 5.

∵:8

The climate in all the West-India islands is nearly the allowing for those accidental differences which the dituations and qualities of the lands themselves product they lie within the tropies, and the sun goes quite over hear's, passing beyond them to the north, and never retriather from any of them than about thirty degrees south, they would be continually subjected to an extreme

^{*} The whole group is called by the Spaniards Lucayos.

intelerable heat, if the trade winds, rifing gradually as the fungithess fixength, did not blow in upon them from the fea, and refresh the zir in such a manner, as to enable them to attend their concerns even under the meridian sun. On the other hand, as the night advances, a breeze begins to be perceived, which blows smartly from the land, as it were from the center, towards the sea, to all points of the compass at once.

By the same remarkable Providence in the disposition of things it is, that when the sun has made a great progress towards the tropic of Cancer, and becomes in a manner verticle, he draws after him such a vast body of clouds, which shield them from his direct beams, and dissolving into rain, cool the air and refresh the country, thirsty with the long drought, which commonly prevails from the beginning of January to the latter end of May.

The rains in the West-Indies are like sloods of water poured from the clouds with a prodigious impetuosity; the rivers suddenly rise; new rivers and lakes are formed, and in a short time all the low country is under water. Hence it is, that the rivers which have their source within the tropics, swell and overflow their banks at a certain season; but so mistaken were the ancients in their idea of the torrid zone, that they imagined it to be dried and scorched up with a continual and servent heat, and to be for that reason uninhabitable; when, in reality, some of the largest rivers of the world have their course within its limits, and the moisture is one of the greatest inconveniencies of the climate in several places.

The rains make the only distinction of seasons in the West-Jadies; the trees are green the whole year round; they have no cold, no frosts, no snows, and but rarely some hail; the storms of hail are, however, very violent when they happen, and the hailstones very great and heavy. Whether it be owing to this moisture, which alone does not seem to be a sufficient stude, or to a greater quantity of a sulphureous acid, which predominates in the air of this country, metals of all kinds that are subject to the action of such causes rust and canker in a very short time; and this cause, perhaps, as much as the heat itself contributes to make the climate of the West-Indies unfriendly and unpleasant to an European constitution.

It is in the rainy feason, principally in the month of August,

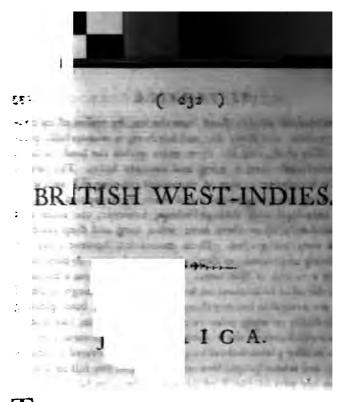

Wafer's Journey acrofs the Ishmus of Darien.

hurricanes, the most terrible calamity to which they are subject as well as the people in the East-Indies, from the climate; th destroys, at a stroke, the labours of many years, and profits the most exalted hopes of the planter, and at the the mo when he thinks himfelf out of danger. It is a fudden : violent from of wind, rain, thunder and lightning, atten with a furious fwelling of the leas, and fometimes with an ear quake; in short, with every circumstance which the element can assemble that is terrible and destructive. First, they see a prelude to the enfuing havor, whole fields of fugar-care whirled into the air, over the face of the country The strongest trees or the le e torn up by the roots, an driven about like stubble; t vindmills are fwept away in moment; their utenfils, the fir tures, the ponderous coppe boilers, and stills of several he idred weight, are wrenched from the ground and batt pieces; their houses are no at one blaft; whilft the rain protection: the roofs are which in an hour raifes the five feet, rushes in upon them with an irrefistible violence.

The grand staple commodity of the West-Indies is sugar; this commodity was not at all known to the Greeks and Romans, though it was made in China in very early times, from whence was derived the first knowledge of it; but the Portuguese were the first who cultivated it in America, and brought it into request, as one of the materials of a very universal luxmry in Europe. It is not determined, whether the cane, from which this fubflance is taken, be a native of America, or brought thither to their colony of Brafil by the Portuguele, from India and the coast of Africa; but, however that may be, in the beginning they made the most, as they still do the best, fogars which come to market in this part of the world. The juice within the fugar cane is the most lively, excellent, and the least cloving tweet in nature, which, sucked raw, has proved extremely nutritive and wholeleme. From the molalles rum is distilled, and from the scummings of the sugar a meaner spirit is procured. The tops of the canes, and the leaves which grow upon the joints, make very good provender for cattle, and the refule of the cane, after grinding, lerves for fi ere, fo that no part of this excellent plant is without it!

and m explosives pay the charges of the plantation, and the lugar of the charges of the plantation, and the lugar of the class gain. However, a man cannot begin a fugar plantage

in a cap, a shirt, a pair of breeches, and a blanket, and fit of their labour yields ten or twelve pounds annually, fice of men negroes, upon their first arrival, is from a fifty pounds, women and grown boys less: but such families as are acquainted with the butiness of the islands by bring above forty pounds upon an average one with and there are instances of a single negro man, expert basiness, bringing one hundred and sifty guineas; and alth of a planter is generally computed from the number es he possesses.

HIS issand, the largest of the Antilles, and the most weble, lies between 17° and 19° north latitude, and between and 79° west longitude, is near one hundred and eighty millength, and about fixty in breadth; it approaches in its figur an oval. The windward passage right before it hath the it of Cuba on the west, and Hispaniola on the east, and is a twenty leagues in breadth.

This island was discovered by Admiral Christopher Colur in his fecond voyage, who landed upon it May 5, 1494, and to much charmed with it, as always to prefer it to the re the illands; in consequence of which, his fon chose it fo dukedom. It was fettled by Juan d'Efquivel, A. D. 2509, built the town, which, from the place of his birth, he-c biville, and cleven leagues farther to the east stood Me Orifton was on the fouth fide of the island, leated on what is valled the Blue Fields river. All these are gone to decay St. Jago, now Spanish Town, is still the capital. The Span held this country one hundred and fixty years, and in their the principal commodity was cacoa; they had an immense ! of horles, affes, and mules, and prodigious quantities of a The English landed here under Penn and Venables, May 1674, and quickly reduced the island. Cacoa was also a rincipal commodity tall the old trees decayed, and the new end not thrave; and then the planters from Barbadoes intro of fugar canes, which hath been the great flaple ever fines.

he prospect of this island from the sea, by reason of its con-: verdure, and many fair and fafe bays, is wonderfully plea-The coast, and for some miles within the land, is low; removing farther, it rifes, and becomes hilly. The whole dis divided by a ridge of mountains running east and west, s shing to a great height; and these are composed of rock, a very hard clay, through which however, the rains that incessantly upon them have worn long and deep cavities, ch they call gullies. These mountains, however, are far a being unpleasant, as they are crowned even to their sumby a variety of fine trees. There are also about a hundred as that iffue from them on both fides; and though none of m are navigable for any thing but canoes, are both pleasing profitable in many other respects. The climate, like that of countries between the tropics, is very warm towards the fea, in marshy places unhealthy; but in more elevated situations er, and where people live temperately, to the full as wholeeas any part of the West-Indies. The rains fall heavy for at a fortnight in the months of May and October; and as rate the cause of fertility, are stilled seasons. Thunder is ty frequent, and fometimes showers of hail; but ice or s except on the tops of mountains, are never feen, but on , and at no very great height, the air is exceedingly cold. he most-eastern parts of this ridge are famous under the of the Blue Mountains. This great chain of rugged s defends the fouth fide of the island from those boisterous -west winds, which might be fatal to their produce. Their ne, though small, supply the inhabitants with good water, h is a great bleffing, as their wells are generally brackish. Spaniards were perfuaded that these hills abounded with but we do not find that they wrought any mines, or if did, it was only copper, of which they said the bells in harth of St. Jago were made. They have several hot which have done great cures. The climate was cerg more temperate before the great earthquake, and the island inpussed to be out of the reach of hurricanes, which fince itable severely felt. The heat, however, is very much tred by land and sea breezes, and it is afferted, that the time of the day is about eight in the morning. In the i, the wind blows from the land on all fides, fo that no i can then enter their ports.

tan island so large as this, which contains above five miltes acres, it may be very reasonably conceived that there punt variety of soils. Some of these are deep, black, and

the found, and feveral others. The north-west winds, which fometimes blow furiously on this coast, render the country on that fide lefs fit for canes, but pimento thrives wonderfully; and certainly many other staples might be raised in small plantations, which are frequent in Barbadoes, and might be very advantageous here in many respects.

The town of Port-Royal flood on a point of land running far out into the fea, narrow, fandy, and incapable of producing but of form the excellence of the port, the convenience of on thips of feven hundred tons coming close up to their fauls, and other advantages, gradually attracted inhabitants in fisch a manner, that though many of their habitations were built on piles, there were near two thousand houses in the town in throat fourishing state, and which let at high rents. The can quike by which it was overthrown, happened on the 7th of June, 1692, and numbers of people perished in it. This Enthquake was followed by an epidemic difease, of which upwirds of three thousand died; yet the place was rebuilt, but the greatest part was reduced to ashes by a fire that happened on The 9th of January, 1703, and then the inhabitants removed mostly to Kingston. It was, however, rebuilt for the third time, and was raising towards its former grandeur, when it was overwhelmed by the fea, August 28, 1722; there is, not with-Handing, a small town there at this day. Hurricanes since that time have often happened, and occasioned terrible devastation; one in particular, in 1780, which almost overwhelmed the little port town of Savannah la Mar,

The island is divided into three counties, Middlesex, Surry, and Cornwall, containing twenty parishes, over each of which Prefides a magistrate, styled a custos; but these parishes in point of fize are a kind of hundreds. The whole contains thirty-fix was and villages, eighteen churches and chapels, and about

exenty-three thousand white inhabitants.

The administration of public affairs is by a governor and Souncil of royal appointment, and the representatives of the People in the lower House of Assembly. They meet at Spanishtown, and things are conducted with great order and dignity. The lieutenant-governor and commander in chief has five thoufand pounds currency, or three thousand five hundred and eventy-one pounds eight shillings and fix-pence three faithings Errling, befides which, he has a house in Spanish-town, a pen or a farm adjoining, and a polink or mountain for provisions, a lecretary, an under fecretary, and a domestic chaplain, and other fees, which make his income at least eight thousand five acputy, one hundred and forty pounds; dred pounds.

The number of members returned by are, for Middlesex seventeen, viz. St. C rothy two, St. John two, St. Thomas in don two, Vere two, St. Mary two, St. sixteen, viz. Kingston three, Port-Royal t St. David two, St. Thomas in the East t George two: for Cornwall ten, viz. St. morland two, Hanover two, St. James tw

The high court of chancery confifts a vernor for the time being) twenty-five m twenty mafters extraordinary, a register, a tents, serjeant at arms, and mace-bearer, admiralty has a sole judge, judge surroughing's advocate, principal register, marsha shal. It must, however, be observed, that as many of the vessels aring for America and the foreign West-Indies make two more voyages in the year, it is usual, in computing the real mater of those vessels, their tonnage and men, to deduct one ind from the official numbers. With this correction the all to all parts is four hundred vessels, containing seventy-int thousand eight hundred and fixty-two tons, navigated by in thousand eight hundred and forty-five men.

The exports for the same year are given on the same authors, as follows:

But it must be noted, that a considerable part of the cotton, idigo, tobacco, manogany, dye-woods, and miscellaneous artiles, included in the preceding account, is the produce of the seeign West-Indies imported into Jamaica, partly under the see-port law; and partly in small British vessels employed in a matraband traffic with the Spanish American territories, payment of which is made chiefly in British manusactures and segroes; and considerable quantities of bullion, obtained by the same means, are annually remitted to Great-Britain of which no precise accounts can be procured.

The General Account of IMPORTS into Jamaica will fland nearly as follows, viz.

which they call the man of war, is faid to meet thips at twenty leagues from land, and their return is, to the inhabitants, a fue fign of the arrival of these ships. When the wind blows from the fouth and fouth-well, they have flocks of eurlews, ploves, fnipes, wild pigeons, and wild ducks. The wild pigeous are very fat and plentiful at fuch feafons, and rather larger than those of England. The tame pigeons, pullets, ducks, and poultry of all kinds, that are fired at Barbadoes, have also a fine flavour, and are accounted more delicious than those of Europe. The rabbits are fcarce; they have 'ares, and if they have deer of es. The infects of Barbadots any kind, they are kept as i their fnakes or their fcorpiers are not venomous, nor oublesome, and bite, but at ever fling. The m on the continent. Various more tolerable in other infects are found or nd, some of which are true than those that are produced blesome, but in no greater l. Barbadoes is well supplied by every warm fummer in with fifh, and some caugh ____ fea furrounding it are almost peculiar to itself, such as the parrot fish, inappers, grey civalia, terbonis, and coney fifth. The mullets, lobsters, and crabs caught here are excellent; and the green turtle is, perhaps, the greatest delicity that ancient or modern luxury can boaft of. At Birbarices this delicious shell fish seldom tells for less than a shilling a pound, and often for more. There is found in this island & land of land coab, which cats horbs wherever it can find them, and fhelters mielf in houses and hollow trees. According to report, they are a finell fish of passage, for in March they travel to the fee in great numbers.

The inhabitants may be reduced to three classes, viz. the masters, the winte servants, and the blacks. The former are either English, Soots, or Irish; but the great encouragement given by the great ment to the peopling of this and other West-Indian in ada, stated of time. Dutch, Lench, Portuguese, and Jews, tractile among them; by which, after a certain time, they account the relationship which, after a certain time, they account the relationship which are purchase, lead more easy lives trained as a black of a track of the water and when they come to be even and, their wayer and either all winces are considerable. The relationship of the walls inhabitants in general are the same as in track plates as at free contribus in Laupe. The capital of the observant.

1 the English, some time after the year 1625, first land-; they found it the most destitute place they had visited. It had not the least appearance of ever havs peopled even by favages. There was no kind of pasture or of prey, no fruit, no herb, no root sit for ng the life of man. Yet, as the climate was fo good, foil appeared fertile, some gentlemen of small fortune nd resolved to become adventurers thither. The trees large, and of a wood so hard and stubborn, that it was nat difficulty they could clear as much ground as was for their subsistence. By unremitting perseverance, ; they brought it to yield them a tolerable support; found that cotton and indigo agreed well with the foil, : tobacco, which was beginning to come into repute in , answered tolerably. These prospects, together with n between king and parliament, which was beginning out in England, induced many new adventurers to : themselves into this island. And what is extremely ale, so great was the increase of people in Barbadoes, ive years after its first settlement, that in 1650, it consore than fifty thousand whites, and a much greater of negro and Indian slaves. The latter they acquired s not at all to their honour; for they seized upon all shappy men, without any pretence, in the neighbourds, and carried them into slavery; a practice which lered the Caribbee Indians irreconcileable to us ever They had begun a little before this to cultivate sugar, oon rendered them extremely wealthy. The number therefore was still augmented; and in 1676 it is supnat their number amounted to one hundred thousand, together with fifty thousand whites, make one hundred r thousand on this small spot; a degree of population n in Holland, in China, or any other part of the world owned for numbers. At the above period, Barbadoes d four hundred fail of ships, one with another, of one and fifty tons, in their trade. Their annual exports , indigo, ginger, cotton, and citron-water, were above re thousand pounds, and their circulating cash at hom > hundred thousand pounds. Such was the increase (on, trade, and wealth, in the course of fifty years te that time this island has been much on the declin is to be attributed partly to the growth of the Free clonies, and partly to our own establishments in f uring isles. Their numbers at present are said ?

named after himself, but was never planniards: it is in reality the oldest of a in the West-Indies, and the common mand English settlements in the Carifold Spaniards: Warner, a respectable gent Capt. Warner, a respectable gent Capt. Worth in a voyage to Surinam, acquainted with a Capt. Painton, a ve who suggested to him the advantages of the West this issuad deserted by the out this as eligible for such an under returning to Europe in 1620, deterproject into execution. He accordingly party to Virginia, from whence he to Christopher's, where he arrived in the mand by the month of September follow crop of tobacco, which they proposed commodity.

Unfortunately, their plantations were end of the year by an hurricance; in calamity, Mr. Warner returned to Englipowerful patronage of the Earl of Carliff to be fitted out and laden with all kinds

remained with them on the island, from whence, by their united

After this exploit, these two leaders returned to their respedive countries to folicit succours, and bringing with them the name of conquerors, they met with every encouragement. Wamer was knighted, and, by the influence of his patron, fent back in 1626, with four hundred fresh recruits, amply furnished with necessaries of all kinds. D'Esnambuc obtained from Cardinal Richelieu, the then minister of France, the establishment of a separate company, to trade with this and some other illands. Subscriptions, however, did not come in very rapid, and the hips fent out by the new company were so badly provided, that of five hundred and thirty-two new fettlers, who failed from France in 1627, the greater part perished miserably at fee for want of food. The English received the survivors, and, to prevent contests about limits, the commanders of each nation divided the island as equally as possible among their respective followers. The island thus continued in the hands of the French and English until the peace of Utrecht, when it was finally ceded to Great-Britain. We are not, however, to suppose, that during this period harmony and good-will prevailed; on the contrary, the English were three times driven off the Mand, and their plantations laid waste: nor were the French much less sufferers. Such are the consequences of those cursed lyttems or maxims of government, which beget a spirit of enunity against all those who are of a different nation. After the Peace of Utrecht, the French possessions, a few excepted, were fold for the benefit of the English government; and in 1783, They thousand pounds of the money was granted as a marriage Portion to the Princess Anne, who was betrothed to the Prince of Orange. In 1782, it was attacked and taken by the French, but again ceded to Britain at the peace of 1783.

About one-half of this island is supposed to be unfit for cultivation, the interior parts consisting of many high and barren mountains, between which are horrid precipices and thick woods. The lostiest mountain, which is evidently a decayed volcano, as talled Mount Misery; it rises three thousand seven hundred and seven feet perpendicular height from the sea. Nature has, however, made a recompense for the sterility of the mountains by the sertility of the plains. The soil is a dark grey loam, very light and porous, and is supposed by Mr. Edwards* to be the production of subterraneous fires finely incorporated with a

[.] Vide Hiftory of West-Indies, vol. i p. 429.

111

pure loam or virgin mould; this foil is peculiarly favour the culture of fugar. In the fouth-west part of the isliful phureous springs are found at the foot of some of the tains: the air is, on the whole, salubrious, but the is subject to hurricanes.

St. Christopher's is divided into nine parishes, and c four towns and hamlets, viz. Balleterre, (the capital) point, Old road, and Deep bay; of thefe, Baffeterre and point are ports of entry established by law. The fortif on this island are Charles fort and Brimstone hill near point, th Heterre, one at Fig-tree bay, at Palmete e others of little importance. St. Ch. butes twelve hundred pour he support of the governor rency per 2 s office, which in war time : belides the confidera confifts of ten members; th of affem r representatives, of whom alification for a representati make a .

freehold of forty acres of land, or a house worth forty per annum; for an elector, a freehold of ten pounds per a the governor is chancellor by office, and fits alone on the The jurifdiction of the courts of king's bench and commo centers in one superior court, wherein justice is admin by a chief justice and four affishant judges, the former ap by the king, the latter by the governor in the king's they all hold their offices during pleasure. The office chief judge is worth about fix hundred pounds per a those of the affishant judges triffing. The present nuinhabitants are estimated at four thousand white inhat three hundred free blacks and mulattoes, and about two thousand flaves.

As in the other British islands in the neighbourhood, white males from fixteen to fixty are obliged to enlist militia; they serve without pay, and form two region about three hundred effective men each: these, with a coof free blacks, constituted the whole force of the island the last war. Since that period, a small addition of troops have, we believe, in general been kept there.

ANTIGUA.

ANTIGUA is fituated about twenty leagues east of St. Childopher's, in west longitude 60° 5', and north latitude 17° 3°. It is about fifty miles in circumference, and is reckoned the breeft of all the British Leeward islands.

The illand has neither stream nor spring of fresh water; this ***tonvenience, which rendered it uninhabitable to the Caribbees, Settered for some time Europeans from attempting a permanent Thiblement upon it; but few, if any, are the obstacles of Nature, which civilifed man will not overcome, more especially hen interest spurs him on. The soil of Antigua was found to be fertile, and it foon presented itself to the view of enter-Pring genius, that by means of cifterns the necessity of springs and firems might be superseded. Hence, as early as 1632, a of Sir Thomas Warner, and a number of other Englishmen, feetled here, and began the cultivation of tobacco. In 1674, Colonel Codrington, of Barbadoes, removed to this island, and receeded to well in the culture of fugar, that, animated by his mple, and aided by his experience, many others engaged in the same line of business. A few years after, Mr. Codrington was declared captain-general and commander in chief of the Leeward illands, and carried his attention to their welfare farther than perhaps any other governor either before or fince has tone, and the good effects of his wisdom and attention were loon manifest.

Antigua, in particular, had so far increased, that in 1690, when General Codrington headed an expedition against the Flench settlement at St. Christopher's, it surnished eight hundred effective men. Mr. Codrington dying in 1698, was succeeded by his son Christopher, who, pursuing his sather's steps, held the government till 1704, when he was superfeded by Sir William Matthews, who died soon after his arrival. Queen Anne then bestowed the government on Daniel Park, Esq. a man who for debauchery, villainy and despotism, though he may have been equalled, was certainly never excelled. His government lasted till Dec. 1710, when his oppressions aroused

two of the principal perpetrators to feats is

The principal article raised in this islawhich, cotton-wool and tobacco is raised tities, and likewise provisions to a consideration vourable years.

Crops here are very unequal, and it is e furnish an average: in 1779, there was sh three hundred and eighty-two hogsheads ar feventy-nine tierces of sugar: in 1782, thousand one hundred and two hogsheads : hundred and three tierces: in 1770, 17; were no crops of any kind, owing to long The island is progressively decreasing in pro-The last accurate returns to government w 1774, when the white inhabitants of all two thousand five hundred and ninety, an thirty-seven thousand eight hundred and ei fand hogsheads of sugar of sixteen hundr deemed, on the whole, a good faving crop canes only are cut annually, this is about acte.

Antigua is divided into fix parishes and contains six towns and villages. St. John tal, Parham, Falmouth, Willoughby bay, (fort; the two first are the legal ports of en

ment, is generally stationary at Antigua: in hearing the from the other islands he sits alone, but in causes arising the island he is assisted by a council; and by an act of ly, sanctioned by the crown, the president and a majority council may hear and determine chancery causes during ence of the governor-general; besides this court, there surt of King's Bench, a court of Common Pleas, and a of Exchequer.

les, affumed the fovereignty, and foon afted as tyrants. ibs, unable to contend with them by force, took unl method of murdering all those whom they found enceless state. This produced a war; and the French having received a reinforcement of three hundred men rtinico, forced the favages to retire to a mountain; ence, after exhausting all their arrows, they rolled eat logs of wood on their enemies. Here they were other favages from the neighbouring islands, and again the French, but were defeated anew; and were at last fuch desperation, that forty of them, who had escapthe flaughter, jumped from a precipice into the sea, ey all perished, rather than fall into the hands of their rs, or, "the hill of the leapers," which name it still The French-then destroyed the habitations and all the s of the favages; but fresh supplies of the Caribbeans the war was renewed with great vigour, and great of the French were killed. Upon this they resolved > exterminate the natives; and having accordingly the favages unawares, they inhumanly put to death en and children, as well as the men; burning all their I canoes, to cut off all communication between the ivors and the neighbouring islands.* Notwithstanding parbarous precautions, however, the Caribbees proved oncileable enemies of the French; and their frequent ons at last obliged Parquet to sell all his property in to the Count de Cerillac in 1657.† The new prowho purchased Parquet's property for thirty thousand fent thither a perion of brutal manners to govern the He behaved with fuch insupportable tyranny, that the colonials retailed to Martinico; and the few who condemned him to death after a formal trial. In the

manner in which there perfors carried on the war against the nations, reck estimate may be continued from the following circumstance; a sing girls of twelve on to treen years of age, who was taken the chieff of dispute a tween two at the French officers; each of r as his prior, a thru naming up, put an end to the contest by through the load.

Bwards activity to the file to intriner modify he fays, the Concesting and that it was the great expende which Perques for using the illustic victa of the kilom to sell in supposed to have made much progress in 1700, there were at Grenada no more fifty-one white people, fifty-three free since hundred and twenty-five slaves. Treduced to fixty-four horses and five head of horned cattle. The whole cul plantations of sugar, and sifty-two of it

This unfortunate state of the affairs of in 1714. The change was owing to the of Martinico. The richest of the ships fent to the Spanish coasts, and in their v to take in refreshments. The trading 1 took this navigation, taught the people of their soil, which only required cult furnished the inhabitants with slaves and plantations. An open account was e two colonies. Grenada was clearing its rich produce, and the balance was on the when the war in 1744 interrupted the . the two islands, and at the same time s the fugar plantations. This loss was of coffee, which was purfued during t the activity and eagerness that industr peace of 1748 revived all the labour:

and thirty-one hogs. The cultivation role to eighty-three fugar dantitions, two millions feven hundred and twenty-live thoufund as hundred coffee trees, one hundred and fifty thousand there hundred eacos trees, and eight hundred cotton plants. The provitions confifted of five millions feven hundred forty thousand four hundred and fifty trenches of callada, nine hunded and thirty-three thouland five hundred and ninety-fix batans trees, and one hundred and forty-three squares of potatoes and yams. The colony made a rapid progress, in proportion to the excellence of its foil; but in the course of the last war but me, the illami was taken by the British. At this time, one of the mountains at the fide of St. George's harbour was ftrongly fonfied, and might have made a good defence, but furrendered without firing a gun; and by the treaty concluded in 1763; the illind was ceded to Britain. On this cession, and the management of the colony after that event, the Abbé Raynal has the blowing remarks: "This long train of evils [the ambition and milmanagement of his countrymen] has thrown Grenada into the hands of the English, who are in possession of this conquest by the treaty of 1763. But how long will they keep this colony? Or, will it never again be restored to France? England made not a fortunate beginning. In the first enthusiasm raised by an acquifition, of which the highest opinion had been previbully formed, every one was eager to purchase estates there; they fold for much more than their real value. This captice, by expelling old colonifts who were inured to the climate, fent about one million five hundred and fifty-three thousand pounds out of the mother country. This imprudence was followed by another. The new proprietors, misled by national pride, subfitited new methods to those of their predeccisors; they attempted balter the mode of living among their flaves. The negroes, who from their very ignorance are more attached to their cuttoms than other men, revolted. It was found necessary to fend out troops, and to fled blood: the whole colony was filled with appicions: the mafters, who had laid themselves under a necesby of using violent methods, were afraid of being burnt or in their own plantations: the labours declined, or whe totally interrupted. Tranquility was at length reflored, and the number of flaves increased as far as forty thousand, and the produce raifed to the treble of what it was under the French swimment. The plantations were farther improved by the neighbourhood of a dozen of islands, called the Grenaducs or Genalilloes, which are dependent on the colony. They are Vot. IV. LI

from three to eight leagues in circumference, but do not afferd a fingle spring of water, one small one excepted; the air wholelome; the ground, covered only with thin buffies, has been fercened from the fun; it exhales none of those noxim our vapours which are fatal to the hufbandman. Cariacou, the ally one of the Grenadines which the French occupied, was at frequented by turtle fishermen; who, in the leisure affor-ded them by so easy an occupation, employed themselves in clea ming the ground. In process of time, their small number was created by the accession of some of the inhabitants of Gun adloupe, who finding that their plantations were destroyed by particular fort of ants, removed to Cariacou. The island sourished from the liberty that was enjoyed there. The inhabit ants collected about one thousand two hundred slaves, by whose labours they made themselves a revenue of near twenty thou Land pounds a year in cotton. The other Grenadines do not affer ad & prospect of the same advantages, though plantations are be gun there. Sugar has fucceeded remarkably well at Becouya, largest and most fertile of these islands, which is no more than two leagues dift int from St. Vincent."

In the year 1779, the conquest of this island was accomplianed by D'Estaing, the French admiral, who had been preve sated from attempting it before by his enterprise against St. Vine ent. Immediately after the conquest of St. Lucia, however, being inforced by a squadron under M. de la Motte, he set fai I for Grenada with a fleet of twenty-fix fail of the line and two elve frigates, having on board ten thousand land forces. Here he arrived on the fecond of July, and landed three thousand tro opchiefly Irish, being part of the brigade composed of native = of Ireland in the service of France. These were conducted by Count Dilton, who disposed them in such a manner as to surr und the hill that overbooks and commands George's-town, toge wher, with the fort and harbour. To oppose these, Lord M'Cart -rey, the governor, had only about one hundred and fifty regu Jars and three or four hundred armed inhabitants; but thoughrefultance was evidently vain, he determined nevertheles to make an honourable and gallant defence. The preparation he made were such as induced D'Estaing himself to be presen - tak the attack : and even with this vall superiority of force, the sirle attack on the entrenchments proved unfaccelsful. The fee-ind continued two hours, when the garrifon was obliged to yiel - to the immente disparity of numbers who affaulted them, after having killed or wounded three hundred of their antagons Als.

aving thus made themselves masters of the entrenchments on z hill, the French turned the cannon of them towards the fort hich lay under it, on which the governor demanded a capitution. The terms, however, were so extraordinary and unpreideated, that both the governor and inhabitants agreed in resping them, and determined rather to surrender without any militions at all, than upon those which appeared so extravagant. they did, and it must be acknowledged, that the protection hich was afforded to the helpless inhabitants of the town and pir property, was such as reslected the highest honour and Are on the discipline and humanity of the conquerors, prostions and safeguards were granted on every application; and has a town was faved from plunder which, by the strict rules fives, might have been given up to an exasperated soldiery. In the mean time Admiral Byron, who had been convoying phoneward bound West-India fleet, hastened to St. Vincent, ligges of recovering it; but being informed by the way, that Acent had been made at Grenada, he changed his course, hop-I that Lord M'Cartney would be able to hold out till his aral. On the fixth of July he came in fight of the French fleet, without regarding D'Estaing's superiority of six ships of the and as many frigates, determined, if possible, to force him close engagement. The French commander, however, was so consident of his own prowess as to run the risk of an enmeer of this kind, and having already achieved his conquest, no other view than to preserve it. His designs were faciliby the good condition of his fleet, which being more come out of port than that of the British, sailed faster, so was thus enabled to keep at what distance he pleased. engagement began at eight in the morning, when Admiral fington with his own and two other ships got up to the van enemy, which they attacked with the greatest spirit. As ther thips of his division, however, were not able to get his affistance, these three ships were necessarily obliged to nter a valt superiority, and of consequence suffered exgly. The battle was carried on from beginning to end same unequal manner; nor were the British commanders. they used their utmost efforts for this purposethe French to a choic engagement. The

d, Edwards, and Cornwallis, stoods
Heet for some time. Captain Fa
i fixty-four gun ship, threw hims
gemy's van; and Admiral Rowley

BRANCH COLLEGE CONTRACTOR COLLEGE

fought at the same disadvantage: so that finding it in continue the engagement with any probability of luca ral ceffation of firing took place about noon. It re-t in the same manner about two in the afternoon, and different interruptions till the evening. During this of the British ships had forced their way into St. Ge bour, not imagining that the enemy were already in p the island. They were soon undeceived, however, ing the French colours flying afhore, and the guns at firing at them. This differency put an end to the de had brought on th ement; and as it was now h he fafety of the British think of providi which were in dar m the number of the enemy lly discontinued. During the engagement s fome of Admiral Byron's fhips had fuffered extr Lion of fixty-four guns, Captain Cornwallis, was I pable of re-joining the fleet, which were plying to and was therefore obliged to bear away alone before Two other ships lay far aftern in a very distressed sit no attempt was made to capture them, nor did the Fi ral snow the least inclination to renew the engageme

Grenada was again reflored to Great-Britain at th Paris; it contains about eighty thousand acres of land although no le's than feventy-two thousand one hundre one acres paid taxes in 1776, and may therefore be fi for cultivation, yet the quantity actually cultivated exceeded fifty thousand ecres. The face of the mount mous, but not inaccellible in any part, and ab tpring; and rivulers. To the north and the call, t brick muld, the fame, or nearly the fame, as that mention has been made in the hiftery of Jamaica; fide, it is a rich black mould on a fubfiratum of yello the louth, the had in general is poor, and of a reddithe time extends over a confiderable part of the inter On the whole, however, Grenada appears to be ferti degice, and by the violety, as well as the excellent tunn. Trace adopted to every tropical produc experts of the year 1776, from Grenada and dinence, were femiliary millions twelve thousand died and alty teven pounds of patteevade, and n two landered and leventy-three thouland fix bu feven provide of cloved tigar, eight hundred an thouland teven hundred gallens of rum, one million

and and twenty-feven thousand one hundred and fixty-fix counds of coffee, four hundred and fifty-leven thouland feven andred and nineteen pounds of cacoa, ninety-one thousand nine hundred and forty-three pounds of cotton, twenty-feven doubted lix hundred and thirty-eight pounds of indigo, and time inaller articles; the whole of which, on a moderate compatrion, could not be worth lefs, at the ports of shipping, than for hundred thousand pounds fterling, excluding freight, duties, infurance, and other charges. It deferves to be remembered ton, that the lugar was the produce of one hundred and fix plantations only, and that they were worked by eighteen thoufind two hundred and ninety-three negroes, which was therefor rather more than one hoghead of fixteen hundred weight from the labour of each negro, old and young, employed in the militation of that commodity; a prodigious return, equalled, we telieve, by no British island in the West-Indies, St. Christopher's excepted. The exports of 1787 will be given herealter; they will be found, except in one or two articles, to fall greatly thort of those of 1776.

This island is divided into fix parishes; St. George, St. Divid, St. Andrew, St. Patrick, St. Mark, and St. John : me its chief dependency, Cariacou, forms a feventh pariffi-It is only fince the restoration of Grenada to Great-Britain by the prace of 1783, that an ifland law has been obtained for the eftablishment of a Protestant clergy. This act passed in 1784. and provides Ripends of three hundred and thirty pounds tarrency, and fixty pounds for house rent per annum, for five dirgines, viz. one for the town and parish of St. George, three for the other five out parishes of Grenada, and one for Caracou. Befides these stipends, there are valuable glebe lands, which had been appropriated to the Support of the Roman Catholic clergy, whilst that was the established religion of Grenda. These lands, according to an opinion of the attorney and folicitor-general of England, to whom a quellion on this point was referred by the crown, became vefted in his Majelly as public lands, on the refloration of the iffand to the Botti government," and we believe have fince been applied by t

If the decision of the attorney-general and solicitor-general on mighties, and the government of Great-Britain had a sile to foir the and apply them to a different purpose than that which they were principal tended, and believed for, the fame principle multi-justify the Frent ment in ferzing the church lands as public property, and applying the best of their country; hence it appears that what we term are daring facilities and uturpation when done in France, is fauthoral Berain by legal authority as an aft of justice.

colonial legislature, with the consent of the crown, to the further support of the Projectant church, with some allowance for the benefit of the telerated Romish clergy of the remaining French inhabitants.

The capital of Grenada, by an order of governor Meluli, ion after the cellion of the country to Great-Britain by the peace of Paris, was called St. George. By this ordinance, the English names were given to the feveral towns and purific, and their French names forbidden to be thereafter used in any public acts. The French name of the capital was Fort Royale; it is fituated in a space to the illand, not far from I, and posselles one of the fastit and most come I, and posselles one of the fastit and most come I attely been fortified at a very guar expense.

The other towns in Grenads: properly speaking, inconderable villages or hamlets, a are generally situated at the bays or shipping places in the several out parishes. The perfect town of Cariacou is called Hillsborough.

Georgia has two ports of entry, with feparate establishments, and distinct revenue officers, independent of each other, viz. one at St. George, the capital, and one at Grenville bay, a town and harbour on the east or windward side of the island. The former, by the apply George III, c. 27, is made a free III.

It appears that the white population of Grenada and the Grandines has decreated confiderably fince thefe islands first came into the possession of the English. The number of white inhabitants, in the year 1771, were known to be somewhat er re then fixteen hundren; in 1777, they had decreased to torrect hundred; and at this time they are supposed not to exceed one thousand, of which about two thirds are men able to been arms, and incorporated into five regiments of militia, along a company of fire blicks or mulattoes attached to each. There are likewife about five hundred regular troops film Gozat-Britoin, which are supported on the British esub-Befoles the regular troops which are fent from Great-British for the protection of Grenade, there are in its greenen three commanies of king's negroes, which came from America, where they formed in three expaciries, as pioneers, service is, and I girt dragoines. In Grenada they form a comnor of each, and are commanded by a licutement of the regabeing day in stand.

The negro flaves have also decreased. By the last returns receding the capture of the island in 1779, they were stated thirty-five thousand, of which five thousand were in Caribu, and the smaller islands. In 1785 they amounted to no one than twenty-three thousand nine hundred and twenty-fix the whole. The decrease was owing partly to the want of ty regular supply during the French government, and partly the numbers carried from the island by the French inhabitate, both before and after the peace.

The free people of colour amounted in 1787, to one thousand se hundred and fifteen. To prevent the too great increase I this mixed race, every manumission is, by an act of this land, charged with a fine of one hundred pounds currency, systle into the public treasury. But this law has neither perated as a productive fund, nor as a prohibition; for it is sailly evaded by executing and recording acts of manumission a some other island and government where there is no such its. The evidence of all free coloured people, whether born the or manumisted, is received in the courts of this island, on their producing sufficient proof of their freedom; and such free cople are tried on criminal charges in the same manner as thies, without distinction of colour. They are also allowed to offer and enjoy lands and tenements to any amount, provided try are native-born subjects or capitulants, and not aliens.

The governor, by virtue of his office, is chancellor, ordinary, ad vice-admiral, and prefides folely in the courts of chancery ad ordinary, as in Jamaica. His falary is three thousand two undeed pounds currency per annum, which is raised by a old tax on all flaves; and it is the practice in Grenada to pass fary bill on the arrival of every new governor, to continue wing his government. In all cases of absence beyond twelve nones, the salary ceases and determines.

The souncil of Grenada confirts of twelve members and heaffembly of twenty-fix. The powers, privileges and functions of both these branches of the legislature are the same, and exercised precisely in Limited. A freehold or life citate, of thy acres, is a qualification to fit as repretentatives for the latter, and a freehold or life estate in sifty pounds house rent in St. George, qualifies a representative for the town. An

The currency of Grenada, or rate on containing a commonly they have you contained than derling

estate of ten acres in fee, or for life, or a rent of ten possends in any of the out towns, gives a vote for the representatives of each parish respectively; and a sent of twenty pounds per single intuition of any freehold or life estate in the town is \$5. George, gives a vote for the representative for the town.

The law courts in Grenada, belides those of chancery ordinary, are the court of grand fessions of the peace, held twice a year, viz. in March and September. In this court the first person named in the commission of the peace pre Indes, who is usually the prefident or tenior in council.—The court of common pleas? this court contifts of one chief and four atilifant juffices, whole commissions are during pleasure. chief juffice is ufually appointed in England, a professional anana and receives a falary of fix hundred pounds per annum. four affiliant justices are utually appointed by the governor from among the gentlemen of the island, and act without a falsi y-The court of exchequer: the barons of this court are cornmelioned in like manner as in the court of common pleas; but this court is lately grown into difuse.—The court of admiralty for trial of all prize causes of capture from enemies in war, a rad of revenue learne in peace or war. There is one judge of admiralty and one furregate .-- The governor and council compole a court of error, as in Jamaica, for trying all appeals of error from the court of common pleas.

We have already noticed that there are feveral finall islands ful ject to the laws enacted in Grenada; they each elect a partien to represent them in the general affembly, which is always beld in St. George's. As none of the Grenadines have a narrow in for large vessels, the produce of them is conveyed in small variety to St. George's, from whence it is exported to the dath rent places of Europe, Africa, America, &c. From the number of vessels that arrive there yearly from different places, and from its being the feat of the legislature, it laws become so populous, that two newspapers are published in On occasion of the late prospect of a war with Spain, an area of a upon oath the value of his estate, and the number of states upon it, in order that the general assembly might after than the number of slaves each should send to work upon the teatisfications on Richmend hill, near St. George's.

We find close our account of this illand with a view of its exports in 1987, with an account of its value in the British market.

DOMINICA.

THIS island is situated between 61° and 62° west longitude and 15° and 16° not e, is about twenty-nine mile long, and sixteen broad for named by Columbus, on a count of its being discovered on a Sunday. Prior to the post-1759, its history is a mere blast; at the above period it we taken by Great-Britain from France, and afterwards confirm to her at the peace in 1763.

When Great-Britain took poffession of this island, ma Frenchmen had established plantations of coffee in various part thereof, and these were secured in their possessions by the Br tish government, on condition of taking the oaths of allegiance and paying a quit rent of two shillings per acre per annu provided each plantation did not confift of more than the The rest of the cultivable lands were sold ! hundred acres. auction under the inspection of commissioners appointed f that purpole: ninety-fix thousand three hundred and forty-for zeres were thus disposed of, which yielded to the British g vernment three hundred and twelve thousand and ninety-tv pounds cleven shillings and one penny sterling. These po chases made by British subjects do not appear to have answer the expectation of the buyers, for the French inhabitants : still the most numerous, and possess the most valuable cost plantations in the island, the produce of which has hither been found its most important staple.

At the commencement of the unjust and destructive'w against the American colonies by Great-Britain, the island Dominica was in a very flourishing state. Roseau, its capit had been declared a free port by act of parliament, and wrestored to by trading vessels from most part of the forei Wess-Indies, as well as from America. The French and Spaireds purchased great numbers of negroes there for the suppost their settlements, together with large quantities of the manufactures of Great-Britain, payment for the greater part which was made in bullion, indigo, and cotton, and complet in mules and cattle, articles of prime necessity to the plant

Trans the island, though certainly not so fertile as some others, as rapidly advancing to importance.

The fituation of this island is between the French island of uadaloupe and Martinico, with fafe and commodious roads and arbours for privateers, rendered its defence an object of the atmost importance to Great-Britain; but her despotic principles, folly, and frantic rage against her colonies on the contiment, caused a total neglect of her West-India possessions. Postemy will feareely believe that the regular force allotted to this island, the best adapted of all others for the defence of the Catibbean fea, and the distressing of the French colonies, consistclealy of fix officers and ninety-four privates. In 1778, the Marquis de Bouille, the governor of Martinico, made a descent with two thousand men; all refustance being vain, the only thing the garrifon could do was to procure as favourable terms of capulation as possible. These were granted with such readiness andid great honour to the character of this officer, the inhabiants experiencing no kind of change except that of transferring their obedience from Britain to France, being left unmolefled in the enjoyment of all their rights, both civil and religious. The capitulation was strictly observed by the Marquis, no plunder or irregularity being allowed, and a pecuniary gratification being diffributed among the foldiers and volunteers who accompanied him in the expedition. An hundred and fixty-four pieces of excellent cannon, and twenty-four brais mortars, befiles a large quantity of military stores, were found in the plice, infomuch that the French themselves expressed their fur-Pule at finding to few hands to make use of them. The Marquis, however, took care to supply this defect, by leaving a garnion of one thousand five hundred of the best men he had with him.

Though the conduct of Bouille in the above expedition was fuch as in every part hereof to reflect honour on him as a foldier and a man, yet it was far different with respect to the Marquis Duchilleau, whom Bouille appointed commander in chief in Dominica. During five years and three months, the period this island was subject to the French monarchy, and under his administration, it was a prey to the most villainous despotism and wanton exertion of power. The principles of the late court of Verfailles discovered themselves in all their hellish forms. The English inhabitants were stripped of their arms, and forbid to assemble in any greater number than two in a

269

number of inhabitants, according to the return of is as follows: white inhabitants of all forts, one thouro hundred and thirty-fix; free negroes, &c. four hundred forty-five; flaves, fourteen thousand nine hundred ty-feven; and about twenty or thirty families of Carib-We shall close this account with the following table of a, &c.

S_T. VINCENT.

HIS island contains about eighty-four thousand acres, and is on the whole well watered; it is however, in general mountainous and rugged, but the intermediate vallies are exceeding sense. The country held and cultivated by the British, at protest, does not exceed twenty-three thousand six hundred and series, all the rest of the island being held by the Caribbees, wincapable of cultivation.

The Spaniards, according to Dr. Campbell, bestowed the Same of St. Vincent on this island, on account of its being discovered on a day devoted to that Saint in their calendar; but it does not appear that they ever got possession of it on account of the number of Indians who inhabited it; but aeither the natural strength of the island, nor their numbers, could ultimately exempt them from European hostificies.

When the English and French, who for some years had been ravaging the Windward islands, began to give some consistence their settlements, in the year 1660 they agreed that Domiand St. Vincent should be left to the Caribs as their experty. - Some of these savages, who till then had been diperfed, retired into the former, and the greater part into the ther. There these mild and moderate men, lovers of peace and filence, lived in woods, in scattered families, under the suidance of an old man, whom his age alone had advanced to dignity of ruler. The dominion passed successively into every family, where the oldest always became king, that is to the guide and father of the nation. These ignorant lavages were still unacquainted with the fubline art of subduing and preming men by force of arms; of murdering the inhabisof a country to get policilion of their land-; of granting to the conquerors the property, and to the conquered the wours of the conquered country; and in process of time, of riving both of the rights and the fruit of their toil by whitrary taxes.

Du Tiller or the country of the coun

De l'even the molt ancient hilborian who has writte deurs of the Annales, their termine favages who were terminagement their stallers, foured the captive flaves them were and reflected them to liberty that they mitries that is, the common bleffings of nature, which has a right to withhold from any of his fellow creature.

There kindness did not fine here; for by whatever these thangers were brought into the island, the proper give them their daughters, in marriage, and the sprang from this mixture were called black Caribs: of preserved more of the primitive colour of their fathers the lighter hase of their mothers. The red Caribs are fluture; the black Caribs tall and flout, and this favoge race breaks with a vehemence that feems to ange.

In process of time, however, some differences arose the two nations; the people of Martinico perceiving seived to take advantage of their divisions, and raise the ruins of both parties. Their pretence was, Nick Cariba gave thelter to the flaves who deferted French alands. Imposture is always productive of Their who were fallely accused, were afterwards without reason; but the smallness of the numbers against them, the jealously of those who were appointed the accused to the defection of the red Cariba and the accused to the defection of the red Cariba and the accused to the defection of the red Cariba and the defection and the defection of the red Cariba and the defection of the red Cariba and the defection and the defecti

ļ

They even invited the French to come and live with them, hearing fincere friendship and inviolable concord. This propoli was agreed to, and the next year, 1719, many of the inlabitumes of Martinico removed to St. Vincent.

The first who came thither settled peaceably, not only with the consent, but by the affistance of the red Caribs. This suctified under the set of the red Caribs. This suctified under the set from jealous, or some other motive, taught the savages a stal secret; that people, who knew of no property but the swits of the earth, because they are the reward of labour, learnt with astonishment that they could sell the earth itself, which they had always looked upon as belonging to mankind in general. This knowledge induced them to measure and six boundaries, and from that instant peace and happiness were banished than their island: the partition of lands occasioned divisions mongst them. The following were the causes of the revolution produced by the system of usurpation.

When the French came to St. Vincent, they brought flaves, thing with them to clear and till the ground. The black Cities, shocked at the thought of resembling men who were demand by slavery, and searing that some time or other their colour, which betrayed their origin, might be made a presence for thaving them, took resuge in the thickest part of the forest. In this situation, in order to imprint an indelible mark of distinction upon their tribe, that might be a perpetual token of heir independence, they slattened the foreheads of all their hildren as soon as they were born. The men and women those heads could not bend to this strange, shape, dared no tager appear in public without this visible sign of freedom. The next generation appeared as a new race; the slat-headed aribs, who were nearly of the same age, tall proper men, and and sierce, came and crested huts by the sea side.

They no foener knew the price which the Europeans f. to the lands they inhabited, than they claimed a fhare with the other islanders. This rifing spirit of covetousness was at the appealed by some presents of brandy and a few sabres; but the content with these, they soon demanded fire arms, as the content with these, they soon demanded fire arms, as the content with these, they were desirous of having their time in all future sales of land, and likewise in the produce of passing last. Provoked at being desired a part in this brotherly instition, they formed into a separate tribe, swore never more to assert with the red Caribs, chose a chief of their own, and declared war.

The number of the combatants might be equal, but the firingth was not for. The black Caribs had every advantage over the red, that industry, valour, and boldness, must for adaptive over a week habit and a timorous disposition. But the topy to of equity, which is fellow deficient in favages, made the congressive confert to there with the vanquished all the tentage type of the leavard. It was the only one which both putter to the definous of possessing, because there they were fure of research prefer to from the French.

upon an uneven foil, which is full of ravines, made them us of occupying the plains towards the east. The favages had taken refuge there, refused to quit them, and recourse us to arms to compel them to it. The resistance which opposed to the thunders of European tyranny, was not, ould not possibly be maintained without great difficulty. In officer was measuring out the ground which had just been possession of, when the detachment that accompanied him mexpectedly attacked, and almost totally destroyed on the of March, 1775. It was generally believed that the unsate persons who had just been deprived of their possessions were the authors of this violence, and the troops put selves in motion, and it was determined totally to eradicate destroy them.

nunately it was determined in time that the Caribs were cent, that they had taken or maffacred feveral fugitive flaves had been guilty of fuch cruckties, and that they had fworn to flop till they had purged the ifland of those vagabonds, is enormities were often imputed to them. In order to firm the savages in this resolution, by allurement of rewards, legislative body passed a bill to insure a gratuity of five its, or one hundred and twenty livres, to any one who ld bring the head of a negro, who should have deserted in three months.

a the 19th of June, 1779, St. Vincents shared the sate any other British possessions in the West-Indies, being a by a small body of French troops from Martinico, comied by a lieutenant in the navy. The black Caribbees, ever, joined the soe, and the island surrendered without a gle. The terms of capitulation were easy, and it was again and in 1783 to Great-Britain; at that time it contained one sugar estates, sive hundred acres in cosse, two hundred cone sugar estates, sive hundred acres in cosse, and sive ded in tobacco, besides the land appropriated to the raising tains, yams, maize, &c. All the rest, except the small spots wated by the native Caribbees, retained its native woods, as this time.

the British territory in this island is divided into five paits of which only one was ever furnished with a church, the was blown down in 1780. Kingston is the capital of island, and the feat of government. There are believes to other inconsiderable villages, called towns, but which off each only of a few houses. The government of St. acent is the same as that of Grenada; the council consists of

rack as 1770, there were exported from this island to ritain one hundred fixty-seven bags of cotton, seven I and forty hogsheads of rum; to Ireland one hundred ty-three ditto, sour thousand three hundred and thirty-gsheads, two hundred and thirty-two tierces, two hundreds two barrels of sugar; the whole valued at eighty-nine I nine hundred and seven pounds: and exports to North-valued at twelve thousand six hundred and thirty-three

281

There are a few ships employed in trading to this island indon and from Bristol, and the average of its trade will in the tables annexed. As to the number of inhabitants, ig to the most probable accounts, they consist of between and fourteen hundred whites, and about ten thousand, though some say not so many.

BARBUDA AND ANGUILLA.

ARBUDA, which belongs entirely to the Codringt mily, and the circumference of which is fix or feven le hath dangerous coasts. It is, perhaps, the most even of a American islands. The trees which cover it are weak, a very high, because there are never more than fix or leven of earth upon a layer of lime-stone. Nature hath places plenty of turtles here; and caprice hath occasioned the thither of deer and several kinds of game; chance hath fil woods with pintados and other fowls, escaped from the after some snipwreck. Upon this soil are fed oxen, how mules, for the labours of the neighbouring fettlement other culture is known there, except that of the kind of which is necessary for the feeding of the numerous he those seasons when the pasture fails. Its population is r to three hundred and fifty flaves, and to the small number men who are appointed to overlock them. This private perty pays no tribute to the nation, though it be subject tribunals of Antigua. The air here is very pure and very fome. Formerly, the fickly people of the other English went to breathe it, in order to stop the progress of their c or to recover their strength. This custom hath ceases fome of their indulged themselves in parties of del

Must men then be suffered to perish, in order that should be preserved? How is it possible, that so attached me, which draws down the imprecation of almost all upon the sovereigns and upon the lords of its countries, be six ffered, and should even be established beyond the se have asked this question, and we have been answered, tilling a belonged to the Codingtons, and that they had a stilly—ofe of their property at their pleasure. We now assume that its right of property, which is undoubtedly factor its limits? Whether this right, in a variety of circum the sufficient to public good? Whether the man where some services are sufficient to public good? Whether the man where some services are sufficient to public good?

with thirst? Whether any of the Codrington family would partike of one of those precious pintados, that had cost his countryman or his fellow-creature his life? Whether the man who hould be convicted of having suffered a sick person to die at his door, would be sufficiently punished by the general execution? And whether he would not deserve to be dragged before the tribunals of justice as an assassin?

Anguilla is seven or eight leagues in length, and is very unequal in its breadth, which never exceeds two leagues. Neither mountains, nor woods, nor rivers, are found upon it, and its soil is nothing more than chalk.

Some wandering Englishmen settled upon this porous and friable rock towards the year 1650. After an obstinate labour, they at length succeeded in obtaining from this kind of turf a little catton, a small quantity of millet seed, and some potatoes. Six veins of vegetating earth, which were in process of time discovered, received sugar-canes, which, in the best harvest, yield no more than fifty thousand weight of sugar, and sometimes only sive or six thousand. Whatever else comes out of the colony hath been introduced into it clandestinely from Santa Cruz, where the inhabitants of Anguilla have formed several plantations.

In feasons of drought, which are but too frequent, the island with no other resource but in a lake, the salt of which is sold to the people of New-England; and in the sale of sheep and goats, which thrive better in this dry climate, and upon these arid sains, than in the rest of America.

Anguilla reckons no more than two hundred free inhabitants, ad five hundred flaves: nevertheless it hath an affembly of its wn, and even a chief, who is always chosen by the inhabitants, ad confirmed by the governor of Antigua. A foreigner, who bould be sent to govern this feeble settlement, would infallibly a driven away, by men who have preserved something of the independent manners, and of the rather savage character of their seestors.

The coast of this island affords but two harbours, and even in befe very small vessels only can anchor: they are both defended y four pieces of cannon, which, for half a century past, have sen entirely unfit for service.

BERMUDAS, OR SOMMER'S ISLANDS.

THIS cluster crook, in we two and three the continent islands. The be about four

oft in the form of a shepherd orth latitude 32° 30', between istant from the nearest place any of the other West-Ind the Bermudas islands is fait by few of them are habitaly

The principal is ou George's, which is not above fixteen long, and three at most in breadth. It is univerfally agreed, the the nature of this and the other Bermudas islands has undergon a furprifing alteration for the worfe, fince they were first difa vered; the air being much more inclement, and the foil much more barren than formerly: this is ascribed to the cutting dow those fine spreading cedar trees for which the islands were f mous, and which sheltered them from the blasts of the nor wind, at the same time that it protected the under-growth of the delicate plants and herbs. In fhort, the Sommer islands are no far from being defirable spots; and their natural productions? but just fusficient for the support of the inhabitants, who chief for that read n perhaps, are temperate and lively even to a pi verb. At first tobacco was raised upon these islands, but bei of a worfe quality than that growing on the continent, the tra is now almelt at an end. Lunge quantities of ambergris we also originally found upon the coatts, and afforded a valual commerce; but that trade is also reduced, as likewife th whale trade, though the perquifites upon the latter form part the governor's revenue, he having ten pounds for every wh that is caught. The Bermudas alands, however, might f produce fome valuable commodities, were they prope cultivated. There is here found, about three or four f below the furface, a white chalk flone which is cafily felled, and is exported for building gentlemen's houses the West-Indies. Their value to leaves, if properly manuf

tured, might turn to excellent account in making women's hats; and their oranges are still valuable. Their soil is also said to be excellent for the cultivation of vines, and it has been thought that filk and cochineal might be produced; but none of thele things have yet been attempted. The chief resource of the inhabitants for subsistence is in the remains of their cedar-wood, of which they fabricate small sloops, with the assistance of the New-England pine, and fell many of them to the American colonies, where they are much admired. Their turtle-catching trade is also of service; and they are still able to rear great variety of tame-fowl, and have wild ones abounding in vaft plenty. All the attempts to establish a regular whale fishery on these islands have hitherto proved unsuccessful; they have no cattle, and even the black hog breed, which was probably left by the Spaniards, is greatly decreased. The water on the allands, except that which falls from the clouds, is brackish; and at present the same diseases reign there as in the Caribbee illinds. They have feldom any fnow, or even much rain : but when it does fall, it is generally with great violence, and the north or north-east wind renders the air very cold. The storms generally come with the new moon; and if there is a halo or circle about it, it is a fure fign of a tempest, which is generally attended with dreadful thunder and lightning. The inhabited parts of the Bermudas islands are divided into nine diffriets, called tribes. 1. St. George. 2. Hamilton. 3. Ireand, 4. Devonshire, 5. Pembroke, 6. Pagets, 7. Warwick. 5. Southampton. 9. Sandys. There are but two places on the large island where a ship can safely come near the shore, and thele are so well covered with high rocks, that few will shufe to enter in without a pilot: and they are so well defended by forts, that they have no occasion to dread an enemy. St. George's town is at the bottom of the principal haven, and defended by nine forts, on which are mounted feventy Pieces of cannon that command the entrance. The town has A handsome church, a fine library, and a noble town-house, Where the governor, council, &c. affemble. The tribes of Southampton and Devonshire have each a parish church and library, and the former has a harbour of the same name; there are also scattered houses and hamlets over many of the islands, where particular plantations require them. The inhabitants are clothed chiefly with British manufactures, and all their implements for tilling the ground and building are made in Britain,

Sommers, and Captain Newport, were appointed deputy-governors; but their ship being separated b from the rest of the squadron, was in the year 1600 on the Bermudas, and the governors disagreeing am selves, built each of them a new ship of the cedar th there, in which they feverally failed to Virginia. arrival there, the colony was in such distress, that L war, upon the report which his deputy-governors of the plenty they found at the Bermudas, difpa George Sommers to bring provisions from thence to in the same ship which brought him from Bermy which had not an ounce of iron about it except o the keel. Sir George, after a tedious voyage, at laf the place of his destination, where, soon after his a died, leaving his name to the islands, and his orders to to return with black hogs to the colony of Virgir part of his will, however, the failors did not chuse to but setting fail in their cedar ship for England, landed Whitchurch in Dorfetshire,

was governor of Virginia, Sir Thomas Gates,

Notwithstanding this dereliction of the island, ho was not without English inhabitants. Two sailors, C Waters, being apprehensive of punishment for their had secreted themselves from their fellows when Si

ade each of them mafter of a large estate. Where they were, is ambergris was useless, and therefore they came to the defente resolution of carrying themselves and it in an open out to Virginia or to Newfoundland, where they hoped to kipole of their treasure to advantage. In the mean time, howmer, the Virginia company claimed the property of the Bermudas islands, and accordingly sold it to one hundred and wenty persons of their own society, who obtained a charter from King James for possessing it. This new Bermudas company, as it was called, fitted out a ship with sixty planters on board to lettle on the Bermudis, under the command of one Mr. Richard Moor, by profession a carpenter. The new colony arrived upon the island just at the time the three sailors were about to depart with their ambergris; which Moor having discovered, he immediately seized and disposed of it for the benefit of the company. So valuable a booty gave vail spirit to the new company; and the adventurers settled themfelves upon St. George's island, where they raised cabins. As to Mr. Moor, he was indefatigable in his duty, and carried on the fortifying and planting the island with incredible diligence; for we are told, that he not only built eight or nine forts, or rather blockhouses, but inured the settlers to martial discipline. Before the first year of his government was expired, Mr. Moor received a supply of provisions and planters from England, and he planned out the town of St. George as it now thands. The fame of this settlement soon awakened the jealousy of the Spaniards, who appeared off St. George's with some vessels; but being fired upon by the forts, they meered off though the English at that time were so ill provided for a defence, that they had scarce a single barrel of gunpowder on the island. During Moor's government, the Bermudas were plagued with rats, which had been imported into them by These vermin multiplied so fast in St. the English ships. George's island, that they even covered the ground, and had melts in the trees. They destroyed all the fruits and corn within doors; nay, they increased to such a degree, that St. George's island was at last unable to maintain them, and they from over to the neighbouring islands, where they made as great havoc. This columity lasted five years, though prebably not in the same degree, and at last it ceased all of a

On the expiration of Moor's government, he was succeeded by Captain Daniel Tucker, who improved all his predecessor's schemes for the benefit of the island, and particularly encou-

raged the culture of tobacco. Being a severe disciplinarian he held all under him so rigidly to duty, that five of his subjets planned as bold an enterprise for liberty as was perhaps our put in execution. Their names were Barker, who is said to have been a gentleman; another Barker, a joiner; Guodwin, a ship-carpenter; Paet, a sailor; and Saunders, who planned the enterprise. Their management was as artful as their design was bold. Understanding that the governor was deterred first taking the pleasure of fishing in an open boat, on account of the dangers attending it, they proposed to build him one of the

particular confert part of the island boat, he understood t intelligence was true themselves with the England; and notw their being plundered miseries they underwent, rdingly they did in a feoret governor came to view his ers had put to fea in it. The dventurers having provided les they wanted, failed for e florms they encountered, privateer, and the incredible ded in forty-two days time

at Corke in Ireland, where they were generously relieved and entertained by the Earl of Thomond.

In 16:0, Captain Tucker refigned his government to Captein Butler. By this time the high character which the Sommer islands bore in England, rendered it fashionable for men of the highest rank to encourage their settlement; and several of the first nobility of England had purchased plantations among them. Captain Batler brought over with him five hundred possengers, who became planters on the islands, and raised a monument to the memory of Sir George Sommers. The island wis now to populous, for it contained about a thousand whites, that Captain Butler applied himfelf to give it a new constitution of government, by introducing an affembly, the government the this time being administered only in the name of the governor and council. A body of laws was likewife drawn up, as agreeable to the laws of England as the fituation of the 19 and would admit of. One Mr. Barnard succeeded Captain Butler as governor, but died in fix weeks after his arrival on the illand; upon which the council made choice of Mr. Harrifor to be governor till a new one flould be appointed. No fewer than three thousand English were now settled in the Bermudas, and feveral perfons of distinction had curiofity enough to vifit it from England. Among thele was Mr. Waller the poet, a man of fortune, who being embroiled with the patliament and commonwealth of England, spent some months in the Sommer illands, which he has celebrated in one of his

se the most delightful place in the world. The dangers tending the navigation, and the untowardly fituation of these Mands, through their distance from the American continent, feen to be the reason why the Bermudas did not now become the best peopled islands belonging to England; as we are told that at one period they were inhabited by no fewer than ten thousand whites. The inhabitants, however, never showed my great spirit for commerce, and thus they never could This, together with the gradual alteration become rich. of the soil and climate, already taken notice of, soon caused them to dwindle in their population; and it is computed that they do not now contain above half the number of inhabitants they once did, and even these seem much more inclined to remove to some other place than to stay where they are: so unless some beneficial branch of commerce be found out, or some useful manufacture established, the state of the Bermumust daily grow worse and worse.

The following account we have extracted from Mr. Morfe, to he professes to have given it on the authority of a gentleman who resided many years on the spot:

"The parish of St. George's is an island to the eastward of the main land, on which stands the town of St. George's, containing about five hundred houses. Contiguous to this is is island of St. David's, which supplies the town with butter, wilk, vegetables, poultry, and fresh meat. In the bosom of the crook lie a vast number of small islands, uninhabited. The Mand is rocky, and the ground hilly. In the main road a fulby may pass; and even there, in many places, with disficulty; turn to the right or left, and it is passable only on horseback. The air is healthy; a continual spring prevails: cedars, matted in green, always adorn the hills: the pasture ground ever verdant; the gardens ever in bloom. Most of the prochions of the West-Indies might be here cultivated. The houses are built of a soft stone, which is sawn like timber; when exposed to the whether, and washed with lime, it becomes hard. The houses are white as snow, which, beheld from an eminence, controlled with the greenness of the cedars and pasture ground, the multitude of islands, full in view, realize what the have feigned concerning the Elysian fields. The is nts are numerous; the whole island is a continued vil les, perhaps, than f.ficen or twenty thousand on this small spot, of whom the blacks co Happy for the country, were the color them! The Bermudians are chiefly feafs

of bread to preserve their blooming comproughly acquainted with one another's fatea table, as from their atmosphere, arises dal and detraction. To strangers they themselves are quarrelsome: their friends

reuch confined within a narrow circle or feeond coulins.

"The common food of the Bermudian rent kinds, a fweet potatoe, Indian corr Their water is rain preferved in cifter is grog. Fishing is the favourite am The government is conducted under a go

We shall close this account of the Be

lowing extract from the report of the flave trade:

"Nothing can better flew the flate of than the behaviour of the blacks in the large

privateer, there were seventy slaves. She was taken and carried into Boston; fixty of them returned in a slag of truce distilly to Bermudas; nine others returned by the way of New-York; one only was missing, who died in the cruize, or in optivity."

LUCAY'S, OR BAHAMA ISLANDS.

The Bahamas are fituated between 22° and 27°, degrees worth latitude, and 73° and 81′ degrees west longitude. They extend along the coast of Florida quite down to Cuba, and me faid to be five hundred in number, some of them only rocks, but twelve of them are large and fertile; all are, however, unimbited, except Providence, which is two hundred miles east of the Floridas; though some others are larger and more fertile, maken which the English have plantations.

These islands were the first fruits of Columbus's discoveries; but they were not known to the English till 1667. The isle of Providence became an harbour for the buccancers, or pintes, who for a long time infested the American navigation. This obliged the government, in 1718, to send out Captain Woodes Rogers with a facet to dislodge the pirates, and for making a settlement. This the captain effected; a fort was entited, and an independent company was stationed in the island. Ever since this last settlement, these islands have been improving, though they advance but slowly. In time of war the inhabitants, as well as others, gain by the prizes condemned there, and at all times by the wrecks which are frequent in this labyrinth of rocks and shelves. The Spaniards and Americans captured these islands during the last war, but they were retaken on the 7th of April, 1783.

BESIDES the above enumerated. Great-Beltsin possession part of cluster of islands called the Vingin islands, of which there but little authentic intelligence extant. Mr. Idwards obtaineding them, that is his enquiries were not a his expectations were not answered. They were

-- ((4 (44),))) --

and named by Columbus, but the Spaniards of those day deemed them unworthy of their attention. They are als forty in number, whereof the English hold Tortola, Vitri Gorda, or Peniston, Josvan Dykes, Guana isle, Beef and Thuc iflands, Anegada, Nechar, Prickly Pear, Camana's, Ginge Cooper's. Salt, and Peter's island, with some other of no vila Tortola is the principal, it was originally peopled by Dud buccaneers, who were afterwards driven from thence by party of Englishmen of the same description. The chief men of its improvement rests with a party of English fettlers from Anguilla, who about the year 1690, embarked from thence and took up their refidence in these islands; here they former themselves into a society, their wants were few and their go vernment fimple and unexpensive; a council chosen from among themselves, with a president, exercised both a legi-lative and judicial authority, determining all questions and appeals, without expense to either party. Taxes there wer none, when money was wanting it was raifed by voluntar contribution. Lured by the profpects of European intercourse they, however, purchased in 1773, the privilege of bein the subjects of the hop of Great-British, at the price C four and a halt per cont. on all their produce, and for hundred pounds currency per annual toward the felary of the govern regeneral of the Lectional identis. Thus do€ man, unocquainted with his native rights and privileges, und: the power of projedice, procline of his fillow creature to right to enjoy what God and Nature had node his own. Po tarity, however, better acquinted with the rights of mar will perhaps not only dispute the validity of acts of this kine but concel contracts which their forefathers had no right to mik:

The number of inhelicitatis on there is not at the period choice referred to, was about fifteen hundred whites, are firm thattard handles. SPANISH WEST-INDIES.

UBA is a large and valuable ifland, and by far most important of all the Spanish West-Indies. On the fide it begins at 20° 21' north latitude, touches the ti of Cancer on the north, and extends from 74° to 85. west longitude. It lies fixty miles to the west of Hispar twenty-five leagues north of Jamaica, one hundred mile the east of Jucatan, and as many to the fouth of cape Flo and commands the entrance of the gulphs both of Me and Florida, as also the windward passages. By this situ it may be called the key of the West-Indies. It was disc ed by Columbus in 1492, who gave it the name of Ferdina in benour of king Ferdinand of Spain, but it quickly accessmed its ancient name of Cuba. The natives did regard Columbus with a very favourable eye at his lan and the weather proving very tempestuous, he soon less iffind, and failed to Hayta, now called Hifpaniola, wher was better received. The Spaniards, however, foon be matters of it. By the year 1511, it was totally conqu and in that time they had deflroyed, according to their ecounts, favoral millions of people. But the poffeshor Cabo was far from antworing the expectations of the Spa advisioners, whose availed could be fatiated with not but of Id. Whate mentions finding that there was gold to the illand, C. Anded that it must come from mines, and th and tortuned the few inhabitants they had left, in 2., to extort from them a discovery of the places wh shele mine lay. The mituries endured by thefe poor c

were fuch, that they almost unanimously resolved to put an d sq their own lives, but were prevented by one of the Spah tyrants called Valco Porcellos. This wretch threatened to himfelf along with them; that he might have the pleafure, faid, of tormenting them in the next world worle than he done in this; and to much were they afraid of the Spaards, that this threat diverted these poor savages from their sperate resolution. In 1511, the town of Havannah was built, w the principal place on the island. The houses were at first all only of wood, and the town itself was for a long time to confiderable, that in 1536 it was taken by a French pirate, rio obliged the inhabitants to pay feven hundred ducats to fave from being burnt. The very day after the pirate's departure. bree Spanish ships arrived from Mexico, and having unloaded her cargoes, failed in purfuit of the pirate ship. But such was e cowardice of the officers, that the pirate took all the three in, and returning to the Havannah; obliged the inhabitants pay feven hundred ducats more. To prevent misfortunes of is kind, the inhabitants built their houses of stone, and the lice has fince been ftrongly fortified.

According to Abbé Raynal, the Spanish settlement at Cuba is my important, on three accounts: 1. The produce of the untry, which is confiderable. a. As being the flaple of a tas trade; and, 3. As being the key to the Well-Indies. The naripal produce of this illand is cotton; the commodity, hower, through neglect, is now become to fearce, that fometimes and years pals without any of it being brought into Europe. the place of cotton, coffee has been cultivated, but by a fimirnegligence, that is produced in no great quantity; the whole nduced not exceeding thirty or thirty-five thousand weight, eathird of which is exported to Vera Cruz, and the raft to ladrid. The cultivation of coffee naturally leads to that of fure and this, which is the most valuable production of Ameta, would of itself be sufficient to give Cuba that state of ofperity for which it feems defigned by nature. Although the face of the ifland is in general uneven and mountainous, yet he plains fufficiently extensive, and well enough watered, to pply the confumption of the greatest part of Europe with gar. The incredible fertility of its new lands, if properly anged, would enable it to furpais every other nation, however my have now got the flart of it; yet fuch is the indolence the Spaniards, that to this day they have but few plantaquantity of coarse sugar at a great expense. This serves per for the Mexican market, and partly for the mother count while the indolent inhabitants are content to import sugar themselves at the expense of near two hundred and twenty the sand pounds annually. It has been expected, with probabit that the tobacco imported from Cuba would compensate that for after surnishing Mexico and Peru, there was sufficient, with little brought from Caracca and Buenos Ayres, to supply Spain. But this trade, too, has declined through the neglect of the court of Madrid, in not gratifying the general talks.

tobacco from the verfal trade in the twelve thouser country aboutes large trade be applied to The hundre plantations

grathying the general maic Spanish colonies have as supplies annually about ter might exhiby be increased tile, where some gentlemen or want of population can be than that of breeding or id is not yet cleared; the he beautiful plains of the

vannals, and even those are not what they might be; all t plantations to gether man employ about twenty-five thousand! and femile fieres. The number of whites, meftees, multiand five negative upon the whole affand, amounts to about the thousand. The food of these different species confists of es lent pook, very had beef, and caffive bread. The colony w be more fourfling if its productions had not been made property of a company, whose exclusive privilege operates Coult at an i invariable principle of discouragement. If thing could supply the want of an open trade, and atone for grievances occuliened by this monopoly at Cuba, it would be advantage which this island has for such a long time enjoyed them; the rendezvous of almost all the Spanish vessels tha to the new world; this practice commenced almost with the long melf. Pence do Leon having made an attempt upon rice, in 1712, became acquainted with the new canal of Bab it was immediately discovered that this was the best route filips bound from Mexico to Europe could possibly take, at this the wealth of the illind is principally, if not altoget

HISPANIOLA, Cx St. DOMINGO.

Happenials, called also St. Domingo, is the largest of subside islands, extending about four hundred and two formeast to west, and one hundred and twenty in h

th to fouth, lying between 17° 37' and 20° of north latitude, between 67° 35' and 74° 15' west longitude. The climate of, but not reckoned unwholesome, and some of the inhants are said to arrive at the age of one hundred and twenty, a sometimes restreshed by breezes and rains, and its salubrity kewise in a great measure owing to the beautiful variety of a and valleys, woods and rivers, which every where present melves. It is indeed reckoned by far the finest and most sant island of the Antilles, as being the best accommodated all the purposes of life when duly cultivated.

This island, famous for being the earliest settlement of the miards in the new world, was at first in high estimation for quantity of gold it supplied; this wealth diminished with inhabitants of the country, whom they obliged to dig it out the bowels of the earth; and the fource of it was entirely ed up, when they were exterminated, which was quickly ne, by a feries of the most shocking barbarities that ever disced the history of any nation. Benzoni relates, that of two illions of inhabitants contained in the island when discovered Columbus in 1492, scarce one hundred and fifty-three were ive in 1545. A vehement defire of opening again this fource wealth, inspired the thought of getting slaves from Africa; t, belides that these were found unfit for the labours they tre destined to, the multitude of mines which then began to wrought on the continent, made those of Hispaniola no longer any importance. An idea now fuggested itself, that their groes, which were healthy, strong, and patient, might be tfully employed in husbandry; and they adopted, through cellity, a wife resolution, which, had they known their own terest, they would have embraced by choice.

The produce of their industry was at first extremely small, cause the labourers were sew. Charles V. who, like most rereigns, preferred his favourites to every thing, had granted exclusive right of the slave trade to a Flemish nobleman, who are over his privilege to the Genoese, who condusted this innous commerce as all monopolies are condusted; they resolved sell dear, and they sold but sew. When time and competition dixed the natural and necessary price of slaves, the number them increased. It may easily be imagined that the Spaniards, he had been accustomed to treat the Indians as beasts, did not stertain a higher opinion of these negro Africans, whom they belitted in their place. Degraded still farther in their eyes the price they had paid for them, they aggravated the weight

of their felvicine, it became intolerable, and these weekled flaves which are effect to recover the unalienable rights of sanking a their intempt proved undeceleful, but they resped this benefit to retiring despite, that they were afterwards treated with less inhuminated.

This material has if twarny crimped by the apprehension of revell can be once that name, was attended with some good contequences. Contrastion was partied with some degree of success. Some after the models of the 15th century, Spain drew annually from this call my ten militons weight of sugar, a large quantity of word for doing, tobicen, cases, cassia, ginger, conton, and printy in abundance. One might imagine that such so variable beginnings would give both the define and the means, of calleding them father that a train of events more fatal each than the other, ruined these hopes.

The first mile over a stell from the depopulation of the island; the Sparish completes on the continent thould naturally have contributed to promote the fuccess of an island, which nature seemed to have formed to be the center of that wast dominion analog around it, to be the fittple of the different colonies. But it tell out quite etherwise; on a view of the immense fortunes radio g in Mexico, and other parts, the richest inhabitants of Hapani la began to despite their fettlements, and quitted the true to are of riches, which is on the surface of the earth, to go and ranked the leavels of it for veins of gold, which are quickly exhausted. The government endeavoured in vein to put a from to this emigration; the laws were always either artfally eluded, or openly vicintee.

The weekness, wich was a necessary consequence of such conduct, leaving the coasts without desence, encouraged the cremics of Spain to ravege them. Even the capital of the fillind was taken and pillaged by that celebrated English faz so Francia Drake. The cruiters of less consequence contern themselves with intercepting vessels in their passage through these latitudes, the best known at that time of any in the reworld. To complete these misfortunes, the Castilians themsels commenced pirates; they attacked no ships but these of the own nation, which were more rich, worse provided, and we desended than any others. The custom shey had of fitting ships clindestinely, in order to precure slaves, preven a them from being known, and the ailistance they purchased from

he thips of war, commissioned to protect the trade, insured to

The foreign trade of the colony was its only resource in this distress, and that was illicit; but as it continued to be carried on notwithstanding the vigilance of the governors, or, perhaps, by their connivance, the policy of an exasperated and therefighted court exerted itself in demolishing most of the tea ports, and driving the miserable inhabitants into the inland country. This act of violence threw them into a state of dejection, which the incursions and settlement of the French on the island afterwards carried to the utmost pitch. The latter, after having made some unsuccessful attempts to settle on the island, had part of it yielded to them in 1697, and now enjoy by fir the best share.

Spain, totally taken up with that vast empire which she had been on the continent, used no pains to dissipate this lethargy; she even refused to listen to the solicitations of her Flemish subjects, who earnestly pressed that they might have permission to dear those service lands. Rather than run the risk of seeing them carry on a contraband trade on the coasts, she chose to bury in oblivion a settlement which had been of consequence, and was likely to become so again.

This colony, which had no longer any intercourse with Spain but by a fingle ship, of no great burden, that arrived from thence every third year, confisted, in 1717, of eighteen thouand four hundred and ten inhabitants, including Spaniards, melters, negroes or mulattoes. The complexion and character of these people differed according to the different proportions of American, European and African blood they had received from that natural and transient union which restores all races and conditions to the same level. These demi-savages, plunged the extreme of floth, lived upon fruits and roots, dwelt in ottages without furniture, and most of them without clothes, he few among them, in whom indolence had not totally supteffed the fense of decency and tatte for the conveniencies life, purchased clothes of their neighbours the French in turn for their cattle, and the money fent to them for the aintenance of two hundred foldiers, the priefts and the governent. It doth not appear that the company, formed at Barcein 1757, with exclusive privileges for the re-establishment St. Domingo, hath as yet made any considerable progress. bey fend out only two small vessels annually, which are reighted back with fix thousand hides, and some other commodities of little value,

that a fleet and army fent by Oliver Cromwell, in affairment take it. The inhabitants are Spaniards, negroes, mu meftees, and Albatrares, of whom about a fixth part i Spaniards. It had formerly about two thouland hould it is much declined of late years. The river on white feated is called Ozama. West longitude 69° 30', north 1 18° 25'.

PORTO RICO.

This iffind is fituated between 64° and 6-0 west lon and 18° north littude, lying between Hippaniola at Christopher's. It is one hundred miles in length and in breadth.

Although this island had been discovered and visit Columbus in 1403, the Spaniards neglected it till 1509, the thirst of gotd brought them thirher from St. De under the command of Ponce de Leon, to make a co which afterwards cost them dear.

Porto Rico hath thirty-lix leagues in length, eight breadth, and one hundred in circumference. We may ven affirm, that it is one of the best, if not entirely the the islands of the new world, in proportion to its extent air is wholesome, and tolerably temperate, and it is v by the pure streams of a considerable number of small ri

bare not been able to obliterate, was successively formed a population of forty-four thousand eight hundred and eighty-three men, either white or of a mixed race: most of them were naked: their habitations were nothing more than lass. Nature, with little or no assistance, supplied them with labifilance. The linens, and some other things of little value, which they clandestinely obtained from the neighbouring or sman foreign islands, were paid for by the colony with tobacco, tattle, and with the money which was sent by government for the support of the civil, religious and military establishment. They received from Spain annually only one small veisel, the cargo of which did not amount to more than ten thousand carens, and which returned to Europe laden with hides.

Such was Porto Rico, when in 1765, the court of Madrid carried their attention to St. John, an excellent harbour, even for the royal navy, and which only wants a little more testent. The town which commands it was furrounded with fortifications. The works were made particularly strong towards a narrow and marshy neck of land, the only place by which the town can be attacked on the land side. Two buttalions and one company of artillery crossed the sea for its defence.

At this period, a possession which had annually received from the treasury no more than three hundred and seventy-eight thousand livres, cost them two millions six hundred and thirty-four thousand sour hundred and thirty-three livres, which sum was regularly brought from Mexico. This increase of specie simulated the colonists to undertake some labours: at the same time the island, which till then had been under the yoke of monopoly, was allowed to receive all Spanish navigators. These two circumstances united, imparted some degree of animation to a settlement, the languishing state of which astonished all mations. Its tithes, which before 1765 did not yield more than eighty-one thousand livres, have increased to two hundred and thirty thousand four hundred and eighteen livres.

On the first of January, 1778, the population of Porto Rico amounted to sourscore thousand six hundred and sixty inhabitants, of which number only six thousand sive hundred and thirty were slaves. The inhabitants reckoned seventy-seven thousand three hundred and eighty-four head of horned cattle, twenty-three thousand one hundred and ninety-sive horses, sisteen hundred and sisteen mules, and forty-nine thousand sisty-eight head of small cattle.

The plantations, the number of which were five thousand fix hundred and eighty-one, produced two thousand seem hundred and thirty-seven quintals of sugar; eleven hundred and sourteen quintals of cotton; eleven thousand one hundred and fixty-three quintals of coffee; nineteen thousand five hundred and fixty-fix quintals of rice; fifteen thousand two hundred and sixteen quintals of maize; seven thousand four hundred and sifty-eight quintals of tobacco; and nine thousand eight hundred and sixty quintals of molasses.

The cattle in the several pasture grounds, which were two hundred and thirty-four in number, produced annually elevate thousand three hundred and fixty-four oxen; four thousand three hundred and thirty-four horses; nine hundred and fifty-two mules: thirty-one thousand two hundred and fifty-four head of small cattle.

Till the year 1778, no one citizen of Porto Rico was in reality master of his possessions. The commanders who had fucceeded each other had only granted the income of them. This inconceivable defect hath at length been remedied, the proprietors have been confirmed in their possessions by a law, upon condition of paying annually one real and a quarter, or fixteen fols fix deniers, for every portion of ground of twentyfive thousand seven hundred and eight toises, which they employed in cultures; and three quarters of a real, or ten fols one denier and a half, for that part of the foil that is referved for pasture ground. This easy tribute is to serve for the cloathing of the militia, composed of one thousand nine hundred infamily and two hundred and fifty cavalry. The remainder of the island is distributed on the same conditions to those who Inave little or no property. Thele last, who are distinguished by the name of Agregés, are seven thousand eight hundred and tha 139 five in number.

TRINIDAD AND MARGARETTA.

Trinidad is fituated between 59° and 62° west longitude, 10° north latitude; it was discovered by Columbus, who lande on it in 1498, but it was not till 1505 that the court of Mattrick possession of it.

It is faid to comprehend three hundred and eighteen fquilbergues. It hath never experienced any hurricane, and climate is wheletome. The rains are very abundant there from the middle of May to the end of Oftober; and the dryness the prevails throughout the rest of the year is not attended with

intervenience, because the country, though destitute of nabigable rivers, is very well watered. The earthquakes are more frequent than dangerous. In the interior part of the illust there are four groups of mountains, which, together with some others formed by Nature upon the shores of the seem, occupy a third part of the territory: the rest is in gemeral susceptible of the richest cultures.

The form of the island is a long square. To the north is a coast of twenty-two leagues in extent, too much elevated wild two much divided ever to be of any use. The eastern coast is only nineteen leagues in extent, but in all parts as convenient as one could wish it to be. The southern coast hath sive-and-twenty leagues, is a little exalted, and adapted for the successful cultivation of coffee and cacao. The land on the western side is separated from the rest of the colony, to the south by the Soldier's canal, and to the north by the Dragon's mouth, and forms, by means of a recess, a harbour of twenty leagues in breadth, and thirty in depth. It oficers, hall seasons, a secure asylum to the navigators, who, during the greatest part of the year, would find it difficult to anchor any where else, except at the place called the Galiote.

In this part are the Spanish settlements: they consist only of the port of Spain, upon which there are seventy-eight statched huts, and of St. Joseph, situated three leagues farther the country, where eighty-eight similies, still more wretched than the former, are computed.

The cacao was formerly cultivated near these two villages; is excellence made it be preferred even to that of Caraccas, is order to secure it, the merchants used to pay for it beforeshed. The trees that produced it perished all in 1727, and have not been re-planted since. The monks attributed this diaster to the colonists having refused to pay the tithes. Those who were not blinded by interest or superstition, ascribed it to the north winds, which have too frequently occidented the same kind of calamity in other parts. Since this period, Trinidad hash not been much more frequented than Cubagua; still, however, it produces sugar, since tobacco, indigo, ginger, and a variety of fruits, with some cotton trees and Indian corn, which render it of some importance.

iCubagua is a little island, at the distance of soly from the continent, was discovered, and negliambus, in 1498. The Spaniards, being afterware that its shores contained great treasures, repaired to ludes in 1509, and gave it the name of Pearl Isl

tame animals of these two islands have filled the woods a breed of horned cattle, which are become wild: the tants shoot them, and cut their slesh into slips of three in breadth and one in thickness, which they dry, after melted the fat out of them, so that they will keep or four months. This provision, which is called tassay, in the French settlements for twenty livers a hundred

the money which the government sends to these two s, falls into the hands of the commandants, the officers and military, and the monks. The remainder of the s, who do not amount to more than fixteen hundred, in a state of the most deplorable poverty. In time of they furnish about two hundred men, who, for the sake under, offer themselves, without distinction, to any of colonies that happen to be sitting out cruizers for sea, as these, there are some other small islands claimed by the ards, but to which they have paid little or no attention.

FRENCH WEST-INDIES.

MARTINICO.

MARTINICO is the chief of the French Caribbee islands, the middle of which is fituated in west longitude 61° a north latitude 14° 30'.

This island was first settled by M. Desnambuc a French.

man, in the year 1635, with only one hundred men from St. Christopher's. He chele rather to have it peopled from thence than from Europe, as he forelaw that men tired with the fatigue of such a long voyage, would mostly perish soon after their arrival, either from the climate, or from the hardships incident to more emigrations. They completed their full fettlement without any difficulty; the natives, intimidated by their fire aims, or feduced by promifes, gave up the western and fonthern parts of the island to the new comers. Ina first time, however, perceiving the number of these enterprifing firangers daily increasing, they relolved to extirpate them, and therefore called in the favages of the neighbouring illands to affall them; they fell jointly upon a little fort that had been haffly erected, but were repulled with the Ic's of seven or eight hundred of their best warriors, who were left dead upon the spot.

After this check, the favages for a long time disappeared entirely, but at less they returned, bringing with them presents to the French, and making excuses for what had happened; they were received in a friendly manner, and the reconciliation scaled with pets of brandy. This peaceable state of affairs, however, was of no long continuance, the French took such undue advantages of their superiority over the savages, that they soon rekindled in the others that hatred which had never been entirely subdued. The savages separated into small bands,

and waylaid the French as they came fingly out into the woods to hunt, and waiting till the sportsman had discharged his piece, sushed upon and killed him before he could charge it again. Twenty men had been thus assaffinated before any reason could be given for their sudden disappearance; but as soon as the matter was known the French took a severe and satal revenge; the savages were pursued and massacred, with their wives and shildren, and the few that escaped were driven out of Martinico, to which they never returned.

The French being thus left sole masters of the island, lived quietly on those spots which best suited their inclinations. At this time they were divided into two classes; the first consisted if those who had paid their passage to the island, and these were called inhabitants, and to these the government distributed hads, which became their own, upon paying a yearly tribute. These inhabitants had under their command a multitude of disorderly people brought over from Europe at their expense, whom they called engages, or bondsmen. This engagement was a kind of flavery for the term of three years, on the expiration of which they were at liberty, and became the equals of those whom they had served. They all'confined themselves at first to the culture of tobacco and cotton, to which was foon added that of arnotto and indigo. The culture of sugar also was begun about the year 1650. Ten years after, one Benjamin D'Acosta, a Jew, planted some cacao trees, but his example was not followed till 1684, when chocolate was more commonly wied in France. Cacao then became the principal support of the colonists, who had not a sufficient fund to undertake sugar plantations; but by the inclemency of the season in 1718, all the cacao trees were destroyed at once. Coffee was then propoled as a proper object of culture; the French ministry had received as a present from the Dutch, two of these trees, which were carefully preserved in the king's botanical garden. Two young shoots were taken from these, put on board a ship for Martinico, and entrusted to the care of one M. Desclieux; this ship happened to be straitened for want of fresh water, and the trees would have perished, had not the gentleman shared , with them that quantity of water which was allowed for his own drinking. The culture of coffee was then begun, and attended with the greatest and most rapid success; about the end of the last century, however, the colony had made but small dvances. In 1700 it had only fix thousand five hundred and minety-leven white inhabitants; the favages, mulattocs, and free Fegroes, men, women, and children, amounted to no more than five hundred and feven; the number of flaves was but fourteen thousand five hundred and fixty-fix; all these together made a population of twenty-one thousand fix hundred and forty-five persons.

After the peace of Utrecht, Martinico began to emerge from that feeble flate in which it had so long continued. The island then became the mart for all the windward French settlements; in its ports the neighbouring islands sold their produce, and brought the commodities of the mother country; and, in short, Martinico became samous all over Europe: their labour improved the plantations as far as was consistent with the consumption then made in Europe of American productions, and the annual exports from the island amounted to about seven hundred thousand pounds.

The connections of Martinico with the other islands entitled her to the profits of commission, and the charges of transport, as she alone was in the possession of carriages. This profit might be rated at the tenth of the produce; and the sum total must have amounted to near seven hundred and fixty-five thousand pounds; this standing debt was seldom called in, and less for the improvement of their plantations; it was increased by advances in money, slaves, and other necessary articles, so that Martinico became daily more and more a creditor to the other islands, and thus kept them in constant dependence.

The connections of this island with cape Breton, Canada, and Louisians, procured a market for the ordinary sugars, the inferior cosses, the molasses, and rum, which would not self in France. In exchange the inhabitants received salt fish, dried vegetables, deals, and some flour. In the clandestine trade on the coasts of Spanish America, consisting wholly of goods manufactured by the French nation, she commonly made a prost of ninety per cent. on the value of about one hundred and seventy-sive thousand pounds, sent yearly to the Caracca neighbouring colonies.

Upwards of feven hundred and eighty-feven thousand powere confiantly circulated in this island with great rapicality and this is perhaps the only country in the world where the specie has been so considerable as to make it a matter of in a ndifference to them whether they dealt in gold, silver, or communities. This extensive trade brought into the ports of Marineo annually two hundred ships from France; sourteen sisteen sitted out by the mother country for the coast of Guine sixty from Canada, ten or twelve from the islands of Marine setta and Trinidael, besides the English and Dutch ships

came to carry on a finuggling trade. The private navigation from the island to the northern colonies, to the Spanish contiment, and to the windward islands, employed one hundred and twenty resiels, from twenty to thirty tons burden.

The war of 1744 put a stop to this prosperity: not that the fault was in Martinico itself; its navy, constantly exercised, and accustomed to frequent engagements, which the carrying on a contribund trade required, was prepared for action. In less than his months, forty privateers, fitted out at St. Peter's, spread themselves about the latitude of the Caribbee islands; yet an entire stop was put to the navigation of the colony, both to the Spanish coast and to Canada, and they were constantly disturbed even on their own coasts. The sew ships that came from France is ander to compensate the hazards they were exposed to by the last of their commodities, sold them at a very advanced price, and bought them at a very low one.

When every thing thus feemed tending to decay, the peace that restored the freedom of trade, and with it the hopes of recovering the ancient prosperity of the island; the event, however, did not answer the pains that were taken to attain it. Two years had not elapfed after the ceffation of hostilities, when the colony lost the contraband trade she carried on with the American Spaniards. This lofs was not fo fenfibly felt by the tolony as the hardships brought upon them by the mother country; an unskilful administration clogged the reciprocal and necessary connection between the islands and North-America with to many formalities, that in 1755 Martinico fent but four vellels to Canada. The direction of its colonies, now committed to the care of ignorant and avaricious clerks, it foon tof its importance, funk into contempt, and was profituted to venality. The war broke out afresh, and after a series of sisfortunes and defeats, the island fell into the hands of the anith; it was restored in July 1763, fixteen months after it deen conquered, but deprived of all the necessary means of Prosperity that had made it of so much importance. The conband trade carried on to the Spanish coasts was almost entirely of, the cellion of Canada to Great-Britain precluded all hopes Of opening again a communication, which had only been interapred by temporary mistakes. The productions of the Gredes, St. Vincent, and Dominica, which were now become British dominions, could no longer be brought into their harbours, and a new regulation of the mother country, which so that her having any intercourse with Guadaloupe, lest her no hopes from that quarter.

The colony, thus deprived of every thing as it were, as destitute, nevertheless contained, at the last survey, which we taken on the first of January, 1770, in the compass of twenty eight parishes, twelve thousand four hundred and fifty what people of all ages and of both sexes; one thousand eight but dred and sourteen free blacks or mulattoes; seventy thousan sive hundred and fifty-three slaves; and sour hundred and forty three sugitive negroes. The number of births in 1766, was in proportion of one in thirty among the white people, and of or in twenty-five among the blacks.

The island is fixteen le cumference, leaving out or three leagues into the in all parts by a number conical form. Three mounences; the highest bears the woods with which it is cover which occasion positives damp length, and forty-five in ca fome of which extend to very uneven, and interfede ocks, which are mostly of rife above these smaller enslible marks of a volcano; the continually attract the clouds

which occasion noxious damps, and contribute to make it home and inaccessible, while the two others are in most parts cultivated. From these mountains issue the many springs that water the alland; these waters, which slow in gentle streams, and changed into torrents on the slightest storm; their qualities are changed from the soil over which they slow; in some places they are excellent, in others so bad, that the inhabitants are obliged to drink the water they have collected during the rains seaton.

Of all the French fettlements in the West-Indies, Martinice is the most happily situated with regard to the winds which provide an their test. Its harbours possess the most inestimable advantage of attending a certain shelter from the hurricant that among their latitudes. The harbour of Fort Royal is one of the best in all the windward islands, and so celebrated for its tarrive that when it was open to the Dutch, their ship anothers had orders from the republic to take shelter there in Janua, July, at I August, the three months in which the hurricant are not it requent. The lands of the Lamentin, which are but a larger of that, are the richest and most scribe in the whole in the Post numerous streams which water this from the respectively pretected on of the fortifications secure the posteroide en oversely of the numerous, which, however,

satisficed by a 11.2000 configuration unit foil. This capital authorizes all one real areas of the men of war, which

this account Fort Royal was an improper place to become be center of trade, and was therefore removed to St. Peter's. This little town, notwithstanding the fires that have four inch reduced it to ashes, still contains one thousand seven madred houses. It is situated on the western coast of the island, it a bay or inlet, which is almost circular; one part of it is built in the strand along the sea side, which is called the anchorage, and is the place destined for ships and warehouses; the other surfor the town stands upon a low hill; it is called the Fort, from a small sortification that was built there in 1665, to check he seditions of the inhabitants against the tyranny of monopoly, in it now serves to protect the road from foreign enemies; these two parts of the town are separated by a rivulet.

The anchorage is at the back of a pretty high and steep hill. Shut up as it were by this hill, which intercepts the easterly winds, the most constant and most salubrious in these parts; exposed, without any refreshing breezes, to the scorching beams of the sun, restected from the hill, from the sea, and the black sand on the beach; this place is extremely hot, and always unwholesome; besides, there is no harbour, and the ships which tamot winter safely upon this coast, are obliged to take shelter at Fort Royal. But these disadvantages are compensated by the toweniency of the road of St. Peter's for loading and unloading of goods, and by its situation, which is such that ships can freely poin and out at all times, and with all winds.

GUADALOUPE.

• The middle of this island is seated in about north lititude 16° 10', west longitude 61° 20'; it is of an irregular figure, may be about eighty leagues in circumference, and is divided into two larges by a finall arm of the sea, which is not above two leagues long, and from sifteen to serty fathoms broad. This canal, known by the name of the Salt river, is navigable, but will only carry resease of sifty tons burden.

That part of the island which gives its name to the whole colony, is, towards the center, full of craggy rocks, where the cold is to intense, that nothing will grow upon them but fern, and the useless shrubs covered with moss. On the top of these tooks, a mountain called la Souphriere, or the Brimstone mountain, rises to an immense height; it exhales, through various

epenings, a thick black smoke, intermixed with sparks that are visible by night. From all these hills slow numberless springs, which sertilize the plain below, and moderate the burning but of the climate by a refreshing stream, so celebrated, that the gilleons which formerly used to touch at the Windward slands had orders to renew their provision with this pure and salaming swater: such is that part of the island properly called Gard Caloupe. That which is commonly called Grand Terre, has sebeen so much savoured by nature; it is indeed less rugged, to it wants springs and rivers; the soil is not so fertile, or the climate to wholesome, or pleasant.

No European nation had yet taken possession of this islan when five hundred and fifty Frenchmen, led on by two gent men named Loline and Duplessis, arrived there from Dieppe the 28th of June, 1635. They had been very imprudent their preparations; their provisions were to ill cholen, the they were spoiled in the passage, and they had shipped so se that they were exhausted in two months; they were supplied the in it from the mather country. St. Christopher's, wh that shows concity or disign, resulted to spare them any, and the that stroopts in harbandry they made in the country, could n or you oil rd any thing. No relource was left for the color but from the towages, but the superfluities of a people who α tivere but little, and therefore had never laid up any fton could not be very confiderable. The new comers, not conte with what the fav ges might freely and voluntarily bring, or to a resolution to plumber them, and holdlittles commenced (the fixteenth of January, 1639.

A dressiful famine was the confequence of this kind of we the coloredt were reduced to great in the fields, to cat the commencements, as i to dig up dead brides for their fubfidence. Many who had been three at Algree, hald in abharrence the as that had braken thair ferrors, and all of them can take exilt near. It was in this number that they atomed for their exilt near. It was in this number that they atomed for their exilt near that severally, till the government of Aubert broug a parce with the away sort the end of the year 16.0.

The few inhabitants who had creaped the columities they he drawn upon themolives, were foun joined by fome differently colondis from St. Chaiff photis, by Europeans fond of novelt by fall as tired of navigation, and by fame fea captains, where the colondisty chaits to commit to the case of a grateful for

the treasures they had faved from the dangers of the sea, But fill the prosperity of Guadaloupe was stopped or impeded by obstacles arising from its situation.

The facility with which the pirates from the neighbouring islands could carry off their cattle, their flaves, their very crops, frequently brought them into a desperate fituation. Intelline broils, arifing from jealoufies of authority, often diftubed the quiet of the planters. The adventurers who went over to the Windward illands, difdaining a land that was fitter for agriculture than for naval expedition, were cafily drawn to Martinico by the convenient roads it abounds with. protection of those intrepid pirates brought to that island, all the triders who flattered themselves that they might buy up the spoils of the enemy at a low price, and all the planters who thought they might safely give themselves up to peaceful labours, This quick population could not fail of introducing the civil and military government of the Caribbee islands into Martineo. From that time the French ministry attended more serieally to this than to the other colonies, which were not fo immediately under their direction, and hearing chiefly of this Mand, they turned all their encouragement that way.

It was in consequence of this preference, that in 1700, the number of inhabitants in Guadaloupe amounted only to three thousand eight hundred and twenty-five white people; three lundred and twenty-five savages, free negroes, mulattoes; and 5x thousand seven hundred and twenty-five slaves, many of whom were Caribs.

At the end of the year 1755, the colony was peopled with ame thousand fix hundred and forty-three whites, forty-one thouland one hundred and forty flaves of all ages and both fexes. Her faleable commodities were the produce of three hundred and thirty-four Sugar plantations; fifteen plots of indigo; fortyhe thousand eight hundred and forty stems of cacao; eleven thouland seven hundred of tobacco; two million two hundred and fifty-feven thousand seven hundred and twenty-five of toffee; twelve million feven hundred and forty-eight thousand four hundred and forty-feven of cotton. For her provisions the had twenty-nine squares of rice or maize, and one thousand two hundred and nineteen of potatoes or yams; two million and twenty eight thousand five hundred and twenty banana trees, and thirty-two million five hundred and feventy-feven thouland nine hundred and fifty trenches of calfava. The conle of Guadaloupe confifted of four thousand nine hundred

and forty-fix horles; two thousand nine hundred and twenty-four mules; one hundred and twenty-five affect thirteen has find seven hundred and fixteen head of horned cattle; seven thousand one hundred and fixty-two sheep or goats, and we thousand four hundred and forty-four hogs. Such was the he of Guadaloupe when it was conquered by the British in the month of April, 1759.

The colony, with its dependencies, was reflored to l'and

by the treaty of peace in July, 1763.

By a lurvey taken in 1767, this illand, including fmaller iflands, Defeads, St. Bartholomew, Marigalante, the Saints, dependent upon it, contained eleven thousand handred and fixty-three white people of all ages and both in feven hundred and fifty-two free blacks and mulattoes; fever two thousand seven hundred and fixty-one slaves; which = in all a population of eighty-five thouland three hundred feventy-fix fouls. The cattle confifted of five thousand fixty hories; four thousand eight hundred and fifty-four : one hundred and eleven affes; feventeen thouland three dred and feventy-eight head of horned cattle; fourteen fand eight hundred and ninety-five theep or goats, and thouland fix hundred and fixty-nine hogs. was thirty million four hundred and feventy-fix thou hundred and eighteen trenches of caffava; two million hundred and nineteen thousand two hundred and fixe banana trees; two thousand one hundred and eighteen in of land planted with yams and potatoes. The plant contained feventy-two arnotto trees; three hundred and tw feven of casha; thirteen thousand two hundred and m two of cacao; five million eight hundred and eighty-one fand one hundred and feventy-fix of coffee; twelve milhot hundred and fifty-fix thousand seven hundred and fixty of cotton; twenty-one thouland four hundred and feventy fquares of land planted with fugar-canes. The woods our twenty-two thouland and ninety-feven squares of land; con twenty thouland two hundred and forty-leven in me he thousand four hundred and five uncultivated or for y one thouland hoe bundred and eighty-two plant totten coffee and Providens. Sugar was made b a, two bundred and fixty-three to Alemi-r-mill eve n win

The produce of Guadaloupe, including what'sis poured in from the small islands under her dominion, ought to be very confiderable; but in 1768, it yielded to the mother country no more than one hundred and forty thousand four hundred and eighteen quintals of fine fugar; twenty-three thousand fix hundred and three quintals of raw fugar; thirty-four thousand two hundred and five quintals of coffee; eleven thousand nine bundred and fifty-fave quintals of cotton; four hundred and fity-fix quintals of cacao; one thousand eight hundred and gighty-four quintals of ginger; two thousand five hundred and twenty-nine quintals of logwood; twenty-four chefts of fweetments: one hundred and fixty-five chefts of liquors; thirtyfour casks of rum, and twelve hundred and two undressed skins. All these commodities were fold in the colony only for thice hipdred and ten thousand seven hundred and ninety-two pounds eighteen shillings and three pence; and the merchandise it received from France has cost but one hundred and ninetyseven thousand nine hundred and nineteen pounds, eighteen faillings and fix-pence: but from that period it confiderably increased till the late troubles.

SAINT LUCIA.

Siint Lucia is about twenty-two miles long and eleven broad, the middle of it lying in north latitude 39° 14', west longitude 27? o'. It was first settled by the French in 1650, but was reduced by the English in 1664, who evacuated it in 1666. The French immediately re-settled the island, but were again driven away by the Caribs. As foon as the fawages were gone the former inhabitants returned, but only for a short time; for being afraid of falling a prey to the first privateer that should wifit their coasts, they removed either to other French settlements that were stronger, or which they might expect to be ture defended. There was then no regular culture or colony # St. Lucia, it was only frequented by the inhabitants of Martinico, who came thither to cut wood and to build canoes, and who had considerable decks on the island. In 1718 it was in settled by the French; but four years after, it was given the court of London to the duke of Montague, who was Last to take possession of it. This occasioned some disturbance between the two courts; which was fettled, however by an Prement made in 1731, that till the respective claims should hally adjusted, the island should be evacuated by both salisms, but that both should wood and water there. This

agreement furnished an opportunity for pr precarious interest to exert itself. The English no longer moleste French in their habitations, but employed them as their tants in carrying on with richer colonies a Imuggling t which the fubjects of both governments, thought eq This trade was more or less of advantageous to them. derable till the treaty of 1763, when the property of St. I was secured to the crown of France. After that time colony flourished confiderably. In the beginning of the 1772, the number of white people amounted to two thou and eighteen men, women and children; that of the b to fix hundred and fixty-three freemen, and twelve thou feven hundred and ninety-five flaves. There were I hundred and fix dwelling places. The annual revenu that time was about one hundred and seventy-five thou pounds, which, according to the Abbé Raynal, must increased one-eighth yearly for some time. It was t by the British fleet under admirals Byron and Barrin in the year 1778, but was restored to France at the peac 1783.

The foil of St. Lucia is tolerably good, even at the fea: and is much better the farther one advances into the cour The whole of it is capable of cultivation, except some and craggy mountains, which bear evident marks of old v noes. In one deep velley there are eight or ten ponds, water of which boils up in a dreadful manner, and resome of its heat at the distance of fix thousand toiles from refervoirs. The air in the inland parts, like that of all c uninhabited countries, is foul and unwholesome, but grows noxious as the woods are cleared and the ground laid open. fome parts of the fea coast the air is still more unhealthy account of some small rivers which spring from the foot of mountains, and have not sufficient flope to wash down the s with which the influx of the ocean stops up their mouths which means they spread themselves into unwholesome man on the neighbouring grounds.

TOBAGO.

Tobago is fituated in 11? odd minutes north latitude, hundred and twenty miles fouth of Barbadoes, and about fame distance from the Spanish main. It is about thirty-miles in length and nine in breadth. The climate here is to het as might be expected so near the equator; and it is that it lies out of the course of those hurricanes that I

femetimes proved fo fatal to the other West-India islands. It has a fruitful foil, capable of producing fugar, and indeed every thing else that is raised in the West-Indies, with the addition, if we may believe the Dutch, of the cinnamon, nutmeg and gum copal. It is well watered with numerous springs; and its buys and rivers are fo disposed as to be very commodious for all kind of shipping. The value and importance of this island appears from the expensive and formidable armaments sent thither by European powers in support of their different claims. feens to have been chiefly poffessed by the Dutch, who delended their pretentions against both England and France with the most obstinate perseverance. By the treaty of Aix la Chipelle, in 1748, it was declared neutral, though by the treaty of peace in 1763, it was yielded up to Great-Britain; but, in June, 1781, it was taken by the French, and ceded to tham by the treaty of 1783.

St. BARTHOLOMEW, DESEADA AND MARIGALANTE,

Are three small islands lying in the neighbourhood of Antigua and St. Christopher's, and are of no great consequence to the French, except in time of war, when they give shelter to an incredible number of privateers, which greatly annoy the British West-India trade. St. Bartholomew is now to be considered as belonging to the crown of Sweden, being ceded to it by France in 1785.

HISPANIOLA.

In noticing the Spanish settlements in this part of the globe, we have already taken a general view of this island; it only therefore remains to notice the French settlements thereon.

The French towns are, Cape Francois, the capital, containing leveral years ago, about eight thousand whites and blacks. Legane, though inferior in point of size, is a good port, a place of considerable trade, and the seat of the French government in that island. They have two other towns, considerable for their trade, Petit Guaves and port Louis.

The following is said to be an exact statement of the population, product and commerce of the French colony of Hispaniols in the year 1788, and may serve to shew the immense loss sustained by the late insurrections of the negroes.

Whites, twenty-feven thousand seven hundred and sevenleen; free people of colour, twenty-one thousand eight hundred and eight; slaves, four hundred and five thousand five

DIUL ORIO; EXTY-EIGHT BILLIONS ONE BURGER SEE BILLY-OF fand one hundred and eighty-one ditto of coffee; nine! and thirty thousand and fixteen pounds of indigo; fix two hundred and eighty-fix thousand one hundred and fix ditto of cotton; and twelve thouland nine hund nincty-five dreffed fkins.

Sold to American, English and Dutch smugglers; five millions of pounds of brut fugars; twelve millions coffee; and three millions ditto of cotton.

The molasses exported in American bottoms, valued million of dollars; valuable wood, exported in French

two hundred thousand dollars,

It's trade employed five hundred and eighty large thips ing one hundred and eighty-nine thouland fix hundr Seventy-nine tons, in which the imports amounted to millions of dollars, of which more than eight milli dollars were in manufactured goods of France, and th four millions in French produce.

The Spanish ships exported in French goods, or mone million four hundred thousand dollars, for mules impor them into the colony.

Ninety-eight French Thips, carrying from . Land . 3 dred and thirty tons, imported twenty-nine dred and fix negroes, which fold for eigh

The negroes in the French division of this

The fituation of the French colonies early attracted the attention of the conflituent Affembly. At this time all was as tranquil as fuch a flate of opprefice would permit. Political health can only be attributed to a country with a free conflitution. The fituation of the island is that of a paralytic; one part is topid, whilst the other is affected with the frantic motions of St. Vitus's dance.

The first interference of the National Assembly in the affairs of the colonies, was by a decree of the 8th of March, 1790, which declared, That all free persons, who were proprietors and residents of two years standing, and who contributed to the exigencies of the state, should exercise the rights of voting, which constitute the quality of French citizens.

This decree, though in fact it gave no new rights to the people of colour, was regarded with a jealous eye by the white planters, who evidently faw that the generality of the qualification included all descriptions of proprietors; they affected, however, to impose a different construction on it. The people of colour appealed to common justice and common sense; it was to no purpose, the whites repelled them from their affemblies; some commotions ensued, in which they mutually fell a facilite to their pride and resentment.

These disturbances again excited the vigilance of the National Assembly; a decree was passed on the 12th of October, 1750, by which the Assembly declared, as a constitutional article, as That they would establish no regulations respecting the interial government of the colonies, without the precise and formal request of the colonial assemblies."

Peace, however, was not the consequence of this decree. The proprietors, it is true, had obtained a legal right of TYRAN-Bizine, but the unfortunate question still recurred, Who should right? On this head the decree was filent. New diffentions arole; each of the parties covered, mder a factious patriotilin, the most attrocious deligns. Affalfution and revolt became frequent. Mauduit, a French officer frank, lost his life by the hands of his own countrymen. the length the unfortunate Oge, a planter of colour, who had stanted himself in France in the cause of his brethren, releted to support by force their just pretentions. He landed in the Spanish territory of St. Domingo, where he affembled about a hundred mulattoes. Before he proceeded to hostilities he wrete to the French general, that his define was for peace, provided the laws were enforced. His letter was abfurdly confidered as a declaration of war. Being attacked and vanquished, he took refuge Vol. IV.

on a play or words, or a mode or expremou-

This part of the decree met with but little opposition, it passed not without severe reprehension from a few entimembers. The second article, respecting the people of was strongly contested: those who were before know appellation of patriots, divided upon it. It was, howe termined in the result, that the people of colour, born parents, should be considered as active citizens, and be to the offices of government in the islands.

This second article, which decided upon a right that the of colour had been entitled to for upwards of a century of restoring peace, has been the pretext for all the survils that the colony of St. Domingo has sustained. The not indeed from its execution, but from its counteraction white colonists. Had they, after the awful warnings talready experienced, obeyed the ordinances of an Assempretended to revere; had they imbibed one drop of spirit of that constitution to which they had avowed an ble attachment; had they even suppressed the dictates in the suggestions of prudence, the storm that threater had been averted, and in their obedience to the parent I had displayed an ast of patriotism, and from all possibility of danger.

But the equalization of the people of the perses of the white colonile.

to the National Affembly withdrew their attendance: the colonial committee, always under the influence of the planters, furpended their labours. Its arrival in the island struck the whites with conflernation: they vowed to facrifice their lives rather than fuffer the execution of the decree. Their rage originsting in despotism and phrenzy, carried them so far that they proposed to imprison the French merchants then in the ifland, to tear down the national flag, and horit the British standard in its place, whilst the joy of the mulattoes was mingled with apprehensions and with fears. St. Domingo re-echoed with the cries of the whites, with their menaces and blasphemics against the constitution. A motion was made in the streets to fire upon the people of colour, who fled from the city, and took refuge in the plantations of their friends and in the woods: they were at length recalled by proclamation; but it was only to fwear fubordination to the whites, and to be witnesses of fresh enormities. Amidst these agitations the slaves had remained in their accustomed subordination; nor was it till the month of August, 179s, that the symptoms of the insurrection appeared amongst them.

A confiderable number, both of whites and people of colour, and loft their lives in these commotions before the slaves had given indications of disaffection; they were not, however, insufficient of the opportunities of revolt afforded by the dissentions of their masters; they had learnt that no alleviation of their misteries was ever to be expected from Europe; that in the struggle for colonial dominion, their humble interests had been equally factificed or forgotten by all parties. They felt their curb relaxed by the disarming and dispersion of their mulatto masters, who had been accustomed to keep them under rigorous discipline. Hopeless of relief from any quarter, they role in different parts, and spread desolation over the island. If the cold cruckies of despotism have no bounds, what shall be expected from the paroxysms of despair?

On the 11th of September, 1791, a convention took place, which produced the agreement called the Concordat, by which the white planters flipulated, that they would no longer oppose the law of the 15th of May, which gave political rights to the people of colour. The colonial Assembly even promised to meliorate the situation of the people of colour, born of parents not free, and to whom the decree of the 15th of May did not extend. An union was formed between the planters, which, if it had sqoner taken place, had prevented the insur-

rection. The infurgents were every where dispirited, re and dispersed; and the colony itself preserved from to truction.

By a decree of the National Affembly, the 24th of Sep the people of colour were virtually excluded from all colonial legislation, and expressly placed in the powe white colonists,

If the decree of the 15th of May could infligate th colonists to the frantic acts of violence before describe shall we suppose we celings of the people of ce r, which again blafted the that of the 24th they had justly tos on he constitutional law of th tion of the white coloni ftate, and the folemn -ands, than those diffention fooner was it known in for a while appealed, by the revolt of the negroe with fresh vic The apprehensions entertained I py the effects of the Concordat; flives had beeswhites no fooner found themselves relieved from the of immediate distruction, thin they availed themselve decree of the rith of September; they formally revo Concerdat, and treacherously refused to comply with gogoment to which they owed their very existence. ple of colour were in arms; they attacked the white touthern provinces; they pellelled themselves of Fort S and defeated their opponents in feveral engagements. erful body furrounded Port au Prince, the capital of th and claimed the execution of the Concordat. At three t wes did the whites affect to the requificion, and as oft their engigement. Gratified with the predilection for n and arithociacy, which the Conflicuent Affembly had in i avowed, they affected the appellation of patriots, and address to transfer the popular odium to the people of who were contending for their INDISTUTABLE RIGHT the few white colonists who had virtue enough to espe cause. Under this pretext, the municipality of Port a required M. Grimoard, the captain of the Boreas, a Fr of battle flip, to bring his gams to bear upon, and to c the people of colour affemid of year the town : he at f ed, but the crew, aclasied by the cry of patriotifin, his compliance. No honor was this measure adopted, people of colour gave a looks to their indignation : th over the country, and let the indifcriminately to all tations; the greatest part of the town of Port au Pr after shared the same fate. Nothing seemed to remain for the we hate inhabitants but to seek their safety in quitting the colony.

In the northern parts the people of colour adopted a more magnanimous and perhaps a more prudent conduct. "They begun," fays Mr. Verniaud, "by offering their blood to the whites." "We shall wait," said they, "till we have saved you, before we affert our own claims." They accordingly opposed themselves to the revolted negroes with unexampled courage, and endeavoured to soothe them by attending to their reasonable requisitions.

After this recital of authentic and indisputable facts, it is not difficult to trace the causes of the insurrection. The effects we leave to be described by the professed historian; but the prudent measures of the French government we flatter ourselves will ultimately succeed in extending peace and liberty to every inhabitant of this, and all the other islands under their dominion; and may the godlike plan for the liberation and happiness of the African, be speedily imitated by those governments in Europe who have not had sufficient virtue to set the example.*

* In this account of the French West-India islands it will no doubt be tenarked, that we have taken no notice of the conquest of some of them by Great Britain during the present war. The very great probability that they will soon acknowledge their former dependency on France, and perhaps join in extending her victories over some of the British islands, must be our excuse; but if this is not deemed sufficient, we have only to remark, that the common practice of surrendering, as the price of peace, what has been purchased during a war by a torrent of human blood, render it impossible to say what will, in a few months, belong to England or France.

DUTCH WEST-INDIES.

ST. EUSTATIUS,

SITUATED in 17º 29' north latitude, and 63° 10' west lo gitude, and three leagues north-west of St. Christopher's, = 18 only a mountain, about twenty-nine miles in compals, riling our of the sea like a pyramid, and almost round. But though sea small and inconveniently laid out by nature, the industry o the Dutch have made it to turn to very good account; and i it is said to contain five thousand whites, and fisteen thousand negroes. The files of the mountains are laid out in very pretty fettlements, but they have neither springs nor rivers. They raile here lugar and tobacco; and this illand, as well as Curassou. is engaged in the Spanish contraband trade, for which, however, it is not to well fituated; and it has drawn the same advantage from its censtant neutrality. But when hostilities were commenced by Great-Britain against Holland, Admiral Rodney was fent with a confiderable land and fea force against St. Eustatius, which being incapable of any defence, furrendered at differetion, on 3d of February, 1781. The private property of . the inhabitants was confifcated, with a degree of rigour very uncommon among civilized nations, and very inconfiltent with the humanity and generofity by which the English nation used to be characterised. The reason assigned was, that the inhabitants of St. Eustatius had affisted the United States with naval and other flores. But on the 27th of November, the same year, St. Euflatius was retaken by the French, under the command of the Marquis de Bouille, though their force confisted of only three frigates, ieme fmall craft, and about three hundred

CURASSOU.

This island is situated in twelve degrees north latitude, nine ten leagues from the continent of Terra Firma, is thirty miles ag, and ten broad. It seems as if it were fated, that the genuity and patience of the Hollanders should every where, the in Europe and America, be employed in sighting against unfriendly nature; for the island is not only barren, and pendent on the rains for its water, but the harbour is natully one of the worst in America; yet the Dutch have entirely medied that defect; they have upon this harbour one of the result and by far the most elegant and cleanly towns in the result. The public buildings are numerous and handme; the private houses commodious; and the magazines are, convenient, and well silled. All kind of labour is here erformed by engines; some of them so well contrived that ups are at once listed into the dock.

Though this island is naturally barren, the industry of the butch has brought it to produce a considerable quantity both of obsers and sugar; it has, besides, good salt works, for the reduce of which there is a brisk demand from the English lands, and the colonies on the continent. But what renders his island of most advantage to the Dutch, is the contraband rade which is carried on between the inhabitants and the Spatiards, and their harbour being the rendezvous to all nations in ime of war.

The Dutch ships from Europe touch at this island for intelligence, or pilots, and then proceed to the Spanish coasts for trade, which they force with a strong hand, it being very difficult for the Spanish guarda costs to take these vessels; for they are not only stout ships, with a number of guns, but are manned with large crews of chosen seamen, deeply interested in the safety of the vessel and the success of the voyage. They have each a share in the cargo, of a value proportioned to the station of the owner, supplied by the merchants upon credit, and at prime cost. This animates them with an uncommon courage, and they sight bravely, because every man sights in desence of his own property. Besides this, there is a constant intercourse between this island and the Spanish continent.

Cunflou has numerous warehouses, always full of the commodities of Europe and the East-Indies. Here are all forts of woollen and linen cloth, laces, silks, ribands, iron utensils, availand military stores, brandy, the spices of the Moluccas. and the calicoes of India, white and painted. Hithe Dutch West-India, which is also their African company, ally bring three or four cargoes of slaves; and to this ma Spaniards themselves come in small vessels, and carry o only the best of the negroes, at a very high price, but quantities of all the above forts of goods; and the seller hadvantage, that the refuse of warehouses and mercers and every thing that is grown unfashionable and unsales Europe, go off here extremely well: every thing being sently recommended by its being European. ST. THOMAS.

AN inconfiderable member of the Caribbees, fituated in fixty-four degrees west longitude, and eighteen degrees north latisude, about fifteen miles in circumference, and has a safe and commodious harbour.

St. CROIX, or SANTA CRUZ.

Another small and unhealthy island, lying about five leagues of St. Thomas, ten or twelve leagues in length, and three rour where it is broadest. These islands, so long as they remined in the hands of the Danish West-India Company, were managed, and of little consequence to the Danes; but that wife and benevolent prince, the late king of Denmark, bought "the company's stock, and laid the trade open; and since that time the island of St. Thomas, as well as this, has been so greatly proved, that it is faid to produce upwards of three thousand logheads of sugar, of one thousand weight each, and other of the West-India commodities in tolerable plenty. In time of war, privateers bring in their prizes here for fale; and a great many vessels trade from hence along the Spanish main, and return with money in specie or bars, and valuable merchandise. As for Santa Cruz, from a persect desert a few years since, it is beginning to fettle fast; several persons from the English islands, ome of them of great wealth, have gone to lettle there, and ave received very great encouragement to do fo.

!

HISTORY OF

AMERICAN QUADRUPEDS.

IN a former part of this work * we have had occasion to offer fome observations on the animals of America; by that account, for which we are indebted to the Abbé Clavigero, M. Buffon, and the ingenious Mr. Jefferion, it appears, that the continent of America contains nearly one-half of the known species of quadrupeds, some of them common to North-America, and to the European and Afiatic parts of the castlern continent, and others peculiar to America; of these the greater part have not been accurately examined: it however appears, that those common to both continents are fuch as may be supposed to have migrated from one to the other. Comparing individuals of the fame species inhabiting the different continents, some are found perfectly fimilar; between others there is often found some trivial difference in fize, colour, or other circumflances; in some instances the European animal is larger than the American, in others the reverle is true. A fimilar variety is often found among the same species in different parts of the same continent; this evidently arises from the temperature of the climate, quantity of food furnished in the parts they inhabit, and the degree of fafety and quiet poffeffed; the latter effect is evident on those animals hunted for their flesh or fur, such as the moose deer, beaver, &c. which have gradually diminished in their fize wherever they have thus been diffurbed; but as we have netther a complete description nor complete catalogue extant, we are not warranted in making many observations. It is very probable, that many of the American quadrupeds are still utterly unknown, and others known only by common report from hunters and others, and the information, therefore, to be rereived with caution; from this latter caule has iprung that multiplication and milapplication of names, which has produced numberless contradictions in the different writers on this

^{*} Page 124, &c. of vol. 1.

fubject. Our account will be little more than a catalogue, with a few remarks on those in particular which constitute that important branch of commerce, the fur trade, or are in other respects peculiarly uneful or curious.

The Lama.—The lama is the camel of Peru and Chili; and, before the conquest of those countries by the Spaniards, was the only heaft of burden known to the Indians; its disposition is mild, gentle, and tractable.

Betwee the introduction of mules, these animals were used by the natives to plough the land, and now ferve to carry burdens. They march flowly, and feldom accomplish journies of more than four or five leagues a day; but what they want in speed is made up by perfeverance and industry. They travel long journies in countries impalfable to most other animals, are very fure-footed, and are much employed in transporting the rich ores, dug out of the mines of Potosi, over the rugged hills and narrow paths of the Andes. They lie down to be loaded, and, when weary, no blows can excite them to quicken their pace. They neither defend theinfelves with their feet nor their teeth; when angry, they have no other method of revenging injuries but by ipitting; they can throw out their faliva to the dillance of ten paces; and if it fall on the skin, it raises an itching, accompanied with a flight inflammation. Their seth is eaten, and is taid to be as good as mutton; and of the hair of the wild fort the Indians make cloth.

Like the camel, they have the faculty of abstaining long from water, and like that animal, their food is coarse and trilling; they are neither allowed corn nor hay, green herbage, of which they cat very moderately, being sufficient for their nourithment.

The wild iamas, called guanacos, are stronger and more astive than the domestic kind; they live in herds, and inhabit the highest regions of the Cordelieres, and they run with great swiftness in places of difficult access, where dogs cannot easily follow them.

The lama resembles the camel in the form of its body, but is without the dorsal hunch; its head is small and well shaped, its neck long, and very protuberant near its junction with the body; in its domestic state its hair is short and smooth, when wild it is coarse and long, of a yellowish colour; a black line runs along the top of the back, from the head to the tail. The tame ones vary in colour; some of them are white, others black, others of a mixed colour—white, grey and russet, dispersed in spets: its tail is short, its case are four inches long,

•

.

its feet are cloven like those of the ox, and are armed behind with a spur, by which the animal is enabled to support itself on rugged and difficult ground. The height of the lama is about four feet, and its length, from the neck to the tail, fix feet.

Tapiir.—The tapiir is the hippopotamus of the new world, and has by some authors been mistaken for that animal; it inhabits the woods and rivers on the eastern side of South-America, from the isthmus of Darien to the river of the Amazons. It is a solitary animal, sleeps during the day, and goes out in the night in search of food; lives on grass, sugarcanes and fruits. If disturbed it takes to the water, swims with great case, or plunges to the bottom, and like the hippopotamus, walks there as on dry ground.

It is about the fize of a small cow, its nose is long and stender, and extends far beyond the lower jaw, forming a kind of proboscis, which it can contract or extend at pleasure; each jaw is surnissed with ten cutting teeth, and as many grinders; its ears are small and erect; its body formed like that of a hog; its back orched; legs short; and hoofs, of which it has four upon each foot, small, black, and hollow; its tail is very small; its hair short, and of a dusky brown colour. It is mild and inossensive, avoids all hostilities with other animals, and slies from every appearance of danger. Its skin, of which the Indians make bucklers, is very thick; and when dried, is so hard as to result the impression of an arrow. The natives cat its sless, which is said to be very good.

ANIMALS OF THE OX KIND.

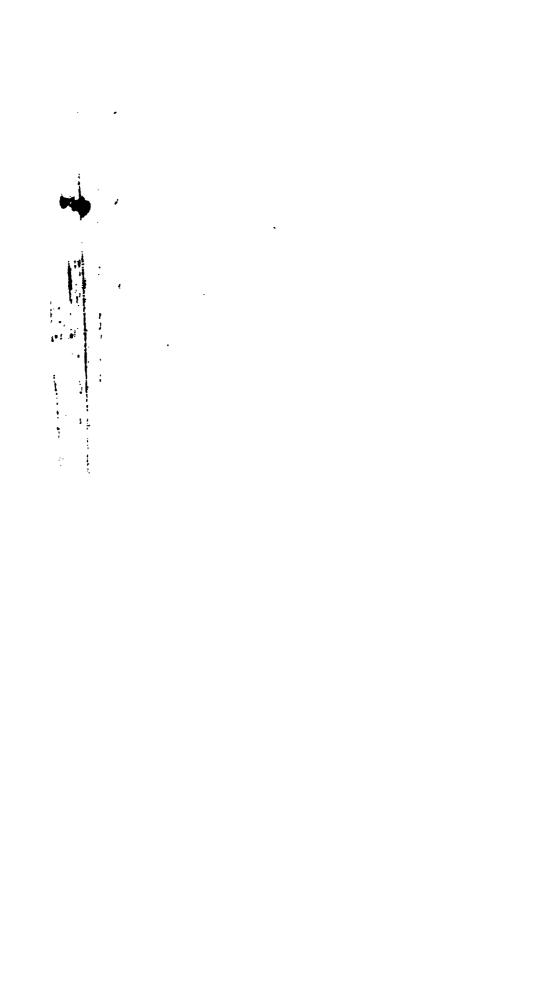

Of this genus, different writers have given an account of three diffinct species in America, besides the common domesticated animal, viz. the BUFFALO, the MUSK, and the BISON, though it is doubtful whether the former of these is any other than the bison, and whether the variation between the neat cattle and the bison is any thing more than the effect of domestication; we shall, however, describe each of them.

Buffalo.—Though there is the most striking resemblance between this animal and the common ox, both in regard to form and nature, their habits and propensities being nearly similar, are both equally submissive to the yoke, and may be employed in the same domestic services; yet it is certain, from experience, that no two animals can, in reality, be more distinct: the cow

.

the opposite side, where the others do the same; so that at last they arrive at the pound, and fall in headlong one upon another, some breaking their necks, backs, &c. And now the consusion becomes so great within, that though the height of the building shall not exceed sive feet, none will make their escape. To elucidate this description of the bussalo pound, we have annexed a representation.

Magh.—The must bull inhabits the interior parts of North-America, on the west side of Hudson's boy, between Churchill and Seal rivers. They are very numerous in those parts, and twe in herds of twenty or thirty. The Indians cat their sless, and make coverings of their skins. They are brought down in sledges to supply the forts during the winter. Notwithstanding the sless is said to have a strong slavour of musk, it is reck-

med very good and wholefome.

It is somewhat lower than a deer, but more bulky; its legs me short, and it has a small hump on its shoulder; its hair is of a dasty red colour, very fine, and so long as to reach to the stound: beneath the hair its body is covered with wool of an ash colour, which is exquisitely fine, and might be converted into various articles of useful manusacture—Mr. Jeremie says, that stockings made of it are finer than silk; its tail is only three inches long, and is covered with long hairs, of which the Esquimaux Indians make caps, which are so contrived, that the long hair, falling round their faces, defends them from the bites of the musquitoes. Its horns are close at the base, and bend downwards, turning out at the points; they are two feet long, and two feet round at the base; some of them will weigh fixty pounds.

These animals delight chiefly in rocky and mountainous countries; they run nimbly, and are very active in climbing sleep ascents.

Bifor.—This animal, often called, though improperly, the builds, is by some supposed to be the same species as the common domesticated animal. Compared with the neat cattle, however, the bifon is considerably larger, especially about the fore part of his body. On his shoulders arises a large sleshy or gray substance, which extends along the back. The hair on his bead, neck and shoulders, is long and woolly, and all of it is at to be spun or wrought into hats. Calves from the domestic cow and wild built are sometimes raised; but when they grow up, thay become so wild that no common sence will confine them.

These animals were once exceedingly numerous in the western parts of Virginia and Pennsylvania; and so late as the year 336

1766, herds of four hundred were frequently feen in Kentuck and from thence to the M: sliftippi: they are likewise common in some parts of Hudson's bay.

ANIMALS OF THE DEER KIND.

Of this genus the American forests abound with almost = 27 the varieties known, and in the greatest plenty; to elucidate this fact, we have only to consider the vast quantities of the skins annually imported into Europe: it will, however, be use necessary to describe the varieties of the different species; we shall, therefore, only notice a serv of the most particular.

has yet been a good description; the figure we have given of in the preceding plate is from a representation professed to taken from a living one brought from the interior of North America: it appears to have been drawn at the time it had had its horns, and at about five years old; it is however asserted that it does not attain its full growth under twenty years. The description given of the above is as follows:

At the age of five years, the length of this creature was ni feet, from the end of the muzzle to the infertion of the take the head and neck being extended in a line with the body; = ts height at the shoulder was four feet six inches; length of t The head one feet fix inches; breadth over the forehead fer en inches; length of the fore legs two feet five inches; length the neck two feet fix; its ears nine inches; and tail three. horns, which it had just shed, are not palmated like those the moole; they are large, and, when full grown, mexica re above fix feet from tip to tip. The antiers are round a rid pointed at the ends, the lowermost antier forms a curve dow # ward over each eve, to which it appears a defence. Its hair was long, of a dark dun colour on the back and fides; on the head and legs dark brown; its eyes full and lively; and below each eye there is a deep flit, about two inches in length, 230 uth of which we are unable to discover.

It was very lively and active, of great strength of body and limbs; its hoofs short, and like those of a calf; the division between them is less than in those of the rein-deer, and, when the animal is a motion, they do not make a rattling noise: has no mane, but the hair under its neck is longer than shat any other part of the body."

Mond.—Of these there are two kinds, the black and grey. The black are said to have been from eight to twe!

feet high; at present they are very rarely seen. The grey moose are generally as tall as a horse, and some are much taller; both have spreading palmated horns, weighing from thirty to sorty pounds; these are shed annually, in the month of February. They never run, but trot with amazing speed. In summer they feed on wild grasses, and the leaves of the most mucilaginous shrubs. In winter they form herds; and when the snow falls, by moving constantly in a small circle, they tread the snow hard, and form what is called a pen. While the snow is deep, and will not bear them, they are consined within this pen, and cat all the bark and twigs within their reach. They are considered as of the same species with the elk of the saftern continent. They are found in New-England, Canada, Hudson's bay, Nova-Scotia, and on the northern parts of the Ohio.

Caribou, or Rein Deer.—This animal is distinguished by its branching palmated horns, with brow antiers. From the tendous of this animal, as well as of the moose, the aboriginal natives made very tolerable thread. It is found in the district of Maine, and in the neighbourhood of Hudion's bay, where they we in great herds. Columns of many thousands annually pass from north to south in the months of March and April. In that season the musquitoes are very troublesome, and oblige them to quit the woods, and seek refreshment on the shore and open country. Great numbers of beasts of prey sollow the herds. The wolves single out the stragglers, detach them from the lock, and hunt them down: the soxes attend at a distance, to pick up the offals left by the former. In autumn the deer, with the fawns bred during the summer, remigrate northward.

Stag, or Red Deer.—This is the most beautiful animal of the leer kind. The elegance of his form, the lightness of his most-ms, the slexibility of his limbs, his bold, branching horns, which are annually renewed, his grandeur, strength and swiftness, give him a decided pre-eminence over every other inhabitant of the forest.

The age of the stag is known by its horns: the first year exhibits only a short protuberance, which is covered with a hairy skin; the next year the horns are straight and single; the third year produces two antiers, the fourth three, the sight sour; and, when arrived at the sixth year, the antiers mount to six or seven on each side, but the number is not always certain.

g, bounds to one fide; and, lying close down upon ally, permits the hounds to pass by, without offering to

in feparate families: the fire, the dam, and the young ones, ate together, and feldom mix with others.

America the roe deer is more common than in Europe, a Louisiana it is much larger.

The description of the two following animals are taken from Umphreville's History of Hudson's Bay, and are given in his own words:

Junping Deer .- This animal, though not half the fize of ed deer, is not the smallest of the species. The one under iption receives its name from the fingular manner of its e; this is by a continual succession of jumps, which they rm with amizing celerity, fpringing at the the distance of a or fixteen feet at a jump. It is a small, clean-made I, exceeding lively and gay, and is of a brown colour nixed with vey hairs; its food confifts of grafs, of the leaves of the poplar, the young branches of different of trees, and the mots adhering to the pines. The horns bout two feet long, and refemble those of the red deer, t in fize; they fall off in the month of April. This handanimal ruts in November, brings forth in May, and has and fometimes two at a birth. It is needlefs to add that left is delicious. There are two other kinds of the jumpzer, one of which has a very fhort tail like the rest of the is, whereas the other kind has a tail about a foot long, and ed with red hairs.

Apis-to-chik-o-fiifh.—I am not sufficiently conversant in the ce of zoology to give this beautiful animal its proper name is English language; perhaps it has never yet been defd in natural history. The French people resident in these call it the Cu Bline, from a white mark on its ramp. A beautiful creature is not to be found in this or perhaps other country; extreme delicacy of make, and exact arity of proportion, are observable in all its parts; no al here is so swift of soot, not the sleetest horse or tan approach it. They herd together in large droves but times three or four only are found in a place. Its horns not offisied like the other species, nor are they branched; male and semale have them, but they never fall off; they able more the horns of the goat than those of the deer fpecies. They feed upon most kinds of grass, and the ter twigs of trees. The whole length may be about four and a half; the legs are white and slender; the rest of the b a light red, with a white space on the rump."

ANIMALS OF THE BEAR KIND.

Brown Bear.—There are two principal varieties of the the brown and the black; the former is found in almost climate, the black bear, chiefly in the forests of the port regions of Europe and America.

The brown bear is for es carnivorous, but its ger food is roots, fruits, and ve les.

It is a savage and solitary unimal, lives in desert and us quented places, and chuses its den in the most gloomy retired parts of the forest, or in the most dangerous and cessible precipices of unfrequented mountains. In Ameri is chiefly found to the northwest of Hudson's bay, and western side of the continent. It is likewise found a Nootka found, and the Andes of Peru. It retires alone to den about the end of autumn, at which time it is exceedi fat, and lives for feveral weeks in a flate of total inactivity abilitionice from food. During this time the female brings ! her young and torkles them; fae chules her retreat for purpole in the most retired places, apart from the male, le found devour them; the makes a warm bed for her yo d attends them with unremitting care during four mor eat in all that time tearcely allows herfelf any nourifhm Sie britigs forth two, and fomotimes three young at a t The cubs are round and shapeless, with pointed muzzles first they do not exceed eight inches in length; they are l during the fift four weeks, of a pale yellow colour, and scarcely any resemblance of the creature when arrived at n rity. The time of gultation in thele animals is about fix mo and they bring forth in the beginning of Jinuary.

In the spring, the old bears, attended by their young, out from their retreats, lean, and almost famished by their confinement. They then ransack every quarter in lear-food; they frequently climb trees, and devour the fruit in quantities, particularly the date plum tree, of which they exceedingly fond; they accend these trees with surprising ity, keep themselves sum on the branches with one paw,

the other collect the truit.

OF AMERICAN QUADRUPEDS.

The hear is remarkably fond of honey, which it will encounter great difficulties to obtain, and feeks for with great cunning and avidity.

It enjoys in a superior degree the sense of hearing, smelling, and touching. Its ears are short and rounded, and its eyes small, but lively and penetrating, and desended by a nictating membrane: from the peculiar formation of the internal parts of its nose, its sense of smelling is exceedingly exquisite; the legiand thighs are strong and muscular; it has sive toes on each soot, and uses its fore seet as a hand, although the toes are not separated as in most animals that do so; the largest singer is on the outside.

The voice of the bear is a deep and furly kind of growl, which it frequently exerts without the least cause. It is very easily irritated, and at that time its resentment is furious, and often capriciously exerted.

When tamed, it appears mild and obedient to its mafter, but it is not to be trusted without the utmost caution. It may be taught to walk upright, to dance to lay hold of a poll with its paws, and perform various tricks. But to give the bear this kind of education, it must be taken when young, and accustomed early to restraint and discipline: an old bear will suffer neither without discovering the most surious resemblement; neither the voice nor the menaces of his keeper have any effect upon him; he equally growls at the hand that is held out to feed, as at that which is raised to correct him.

Black Bear.—Of this animal there are two forts found in the morthern States; both are black, but different in their forms and habits. One has short legs, a thick, clumsy body, is generally fat, and is very fond of sweet vegetable food, such as sweet apples, Indian corn in the milk, berries, grapes, honey, &c. Probably he is not carnivorous. As soon as the first show falls, he betakes himself to his den, which is a hole in a destof rocks, a hollow tree, or some such place; here he gradually becomes torpid, and dozes away the winter, sucking his paws, and expending the stock of fat which he had previously sequired.

The other fort is distinguished by the name of the Ranging len, and seems to be a grade between the preceding and the wolf. His legs are longer, and his body more lean and gaunt. He is carnivorous, frequently destroying calves, sheep, and pigs, and sometimes children. In winter he migrates to the

.

fouthward. The former appears to be the common black bear of Europe; the latter corresponds to the brown bear of the Alps, and is found in all parts of America.

Pilar, or Great II hite Bear.—This animal differs greatly from the common bear in the length of its head and neck, and grows to above twice the fine. Some of them are thirteen feet long; its limbs are of great fize and firength; its hair long, harth, and diagreeable to the touch, and of a yellowish white colour; its cars are flort and rounded, and its teeth large.

It inhabits only the coldest parts of the globe, and has been found above latitude eighty, as far as navigators have penetrated northwards. These inhospitable regions seem adapted to its fullen nature.

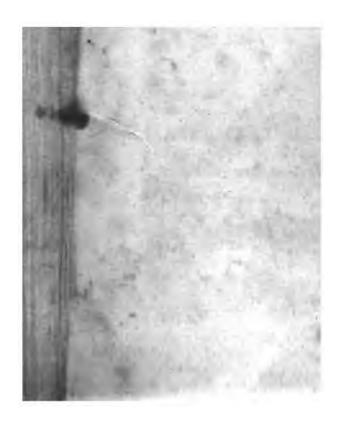

It has been feldom feen farther fouth than Newfoundland, but abounds chiefly on the fliores of Hudfon's bay, Greenland, and Spitzbergen, on one fide, and those of Nova Zembla on the other. It has been fometimes found in the intermediate countries of Norway and Iceland: but such as have appeared in those parts have always been driven thither upon floating theets of ice, to that those countries are only acquainted with them by accident.

W. Secrete-called in Canada the Carcajou, and by hura term the Beaver Fater, feems to be a grade between the bear an d the weedblesch. He agrees nearly with the badger of Eu z-ope. Firs courth is one foot and a half and upwards; his cir cumference nearly two feet; his head and ears relemble a we ood chalk's; his logs fhort; feet and paws large and firong = tall mobile feven mehes long, black, and very bufny or the 25%; hair about two inches long, and very coarle; his head is low grey: back, abacit block; breaft, spotted with white; belly, dirk brown; fides and romp, light reddith brown. This are small lives in holes, cannot run fait, and has a change appears zice. He is very natelaleveus to hunters, following them when fetsting their traps, definiting their game, particularly the beaster; found as far north as the Copper river; and fouth, as country butwice like Padion and like Superior; and on western fig: of North-America, in Canada, and the north ern Enter they are very numerous.

Racio v.— The animal is found in all the temperate parts of North-America. It is found also in the mountains of Jamai Ca. to m who me great nambers of them frequently defeend into the plantitions, and make great havor among the fugar canes, which they are particularly fond. The planters confider the laminals as their greatest enemies, as they frequently do infinite.

RACCOON

ichief in one night's excursion: they have contrived various thods of destroying them, yet still they propagate in such mbers, that neither traps nor fire arms can repel them.

The raccoon is somewhat less than the badger: its head renbles that of a sox, but its cars are round and much shorter,
d its upper jaw very pointed, and longer than the lower:
leyes, which are large, are surrounded with two broad patches
black; its body is thick and short, covered with long hair,
ack at the points, and grey underneath; its tail is long and
ashy, and marked with alternate rings of black and white; its
set and toes are black.

The raccoon is very active and nimble; its claws which are exremely sharp, enable it to climb trees with great facility. It noves forward chiefly by bounding, and though it proceeds in an oblique direction, runs very swiftly.

ANIMALS OF THE DOG KIND.

Wolf .- Of this animal, which is of the dog kind, or rather the dog himself in his lavage state, there are in America great numbers, and a confiderable variety in fize and colour. The dimenfions of a skir, measured for writing this account, were as follows: length of the body five feet; the fore legs eighteen inches; of the hind legs fifteen inches; of the tail eighteen inches. The circumference of the body was from two feet and a half to three feet. The colour of these animals in the northern States is generally a light dirty fallow, with a lift of black along their back. In some, the black is extended down their sides, and fometimes forms waving streaks; others are faid to be spetted: some of them, particularly in the fouthern States, are entirely black, and confiderably smaller. The Indians are faid to have fo far tamed some of those animals before their acquaintance with the Europeans, as to have used them in hunting. They next made use of European dogs, and afterwards of mongrels, the offspring of the wolf and dog, as being more docile than the former, and more eager in the chale than the latter. The appearance of many of the dogs, in the newlyfettled parts of the United States, indicate their relation to the wolf. They are found from Hudfon's bay to the most fouthern parts of North-America, and in most of the fouthern States they are numerous.

Fox.—Of the foxes, there are in America a great variety; fuch as the Silver Fox, * Red Fox, Grey Fox, Crofs Fox, Brant

M. Buffon is of opinion that this is the Isatis, or Arctic doz.

Fox, and several others. Naturalists have generally supposed that there is more than one species of soxes, but they differ very much in their mode of arranging them. It is highly probable, however, that there is but one species of these animals, as they are found in all their varieties of size, and of shades variously intermixed, in different parts of the United States. Foxes and other animals surnished with fur, in the northern parts, are larger than those of the southern.

ANIMALS OF THE CAT RIND.

Catamount.-This animal, the most dreaded by hunters of any of the inhabitants of the forests, is rarely seen, which is probably the reason why no account of him has ever been published, to our own knowledge, except what is contained in a letter of Mr. Colinfon's to M. de Buffon. The dimensions of one, killed a few years ago, in New-Hampshire, as nearly as could be ascertained by the skin, were as follows: the length of his body, including the head, fix feet; circumference of his body two feet and a half; length of his tail three feet, and of his legs about one foot. The colour, along his back, is nearly black; on his fides, a dark reddish brown; his feet black. He feems not calculated for running, but leaps with furniling agility. His favourite food is blood, which, like other animals of the cat kind, he takes from the jugular veilels of cattle, deer, &c. leaving the carcafe. Smaller prey he takes to his den; and he has been known to carry off a child. He feems to be allured by fire, which terrifies all other carnivorous animals, and betrays no fear of either man or beaft. He is found in the northern and middle States, and most probably in Hadfon's bay.

Jajuar.—The Jiguar is the most formidable animal of the new continent, rather larger than the panther, with hair of a bright tiwny colour. The top of the back is marked with long stripes of black, the sides beautifully variegated with irregular oblong spots, open in the middle; the tail not so long as that of the owner, and irregularly marked with large black spots.

It is found in the hottest pass of South-America, is very force, and when pressed with hunger, will sometimes venture to seize a man.

The Indians are much afraid of it, and think it prefers them to the white inhabitants, who, perhaps, are better prepared to repel its attacks. In travelling through the deferts of Guiana, they light great fires in the night, of which these animals are much afraid.

OF AMERICAN QUADRUPEDS.

They howl dreadfully ; their cry, which is expressive of the two monofyllables, hon, hou, is formewhat plaintive, grave, and frong, like that of an ox.

The ant eater, though it has no teeth to defend itself with, is the most cruel enemy the jaguar has to encounter. As foon as the jaguar attacks this little animal, it lies down on its back,

and with its long claws feizes and fuffocates him.

Conguer.-This animal is called by fome the Puma, or American Lion, but differs so much from that noble animal, as not toadmit of any comparison. Its head is small, it has no name, its length, from nose to tail, is five feet three inches, the tail two feet. The predominant colour is a lively red, mixed with black, especially on the back, where it is darkest : its chin, its threat, and all the inferior parts of the body, are whitish; its legs are long, claws white, and the outer claw of the fore feet much longer than the others,

It is found in many parts of North-America, from Canada to Florida i it is also common in Guiana, Brafil, and Mex-

It is herce and ravenous in the extreme, and will fwim rivers to attack cattle, even in their inclosures. In North-America, its fury seems to be subdued by the rigour of the climate, for it will fly from a dog in company with its master, and take shelter by running up a tree.

It is very destructive to domestic animals, particularly to hogs. It preys also upon the moose and other deer; lies lurking upon the branch of a tree till some of these animals pass underneath, when it drops down upon one of them, and never quits its hold till it has drunk its blood. It will even attack beafts of

The Couguar of Pennfylvania .- This is another species of couguar, found in the temperate climates of North-America, as on the mountains of Carolina, Georgia, Pennsylvania, and the adjacent provinces. It differs much from the couguar above described : his limbs are shorter, his body much longer, and his tail is also three or four inches longer. But in the colour of the hair, and the form of the head and ears, they have a perfect refemblance to each other. The couguar of Pennfylvania, fays Mr. Colinfon, is an animal remarkable for thinnels and length of body, shortness of legs, and length of tail. The length of the body, from the muzzle to the anus, is five feet four inches, and that of the tail is two feet fix inches : the fore legs are and foot long, and the hind legs one foot three inches: the eight of the body before is one foot nine inches, and one foot It inhabits Brail and Guiana mach dreaded by the Indians; b numerous.

Oction.—The skin of the mile and most eie, and wariegated, bright tawny; a black stripe exterior hear to tail; its forehead is its legs; its shielders, tides, and with long stripes of black, form middle with small black spots; its large spots, and black at the end are not so vivid as those of the mimarked.

The ocelot very much refemb form of its body, although it is makes its height two feet and a length.

It is a native of South-America to very voracious, but timid, and fe of dogs, and when purtued, flies to It lives chicaly in the mountain the leaves of trees, from whence to come within its reach. It tometic boughs, as if it were dead, till the The margay is smaller than the occlot, and about the size of the wild cat, which it resembles in disposition and habit, living on small animals, birds, &c.—It is very wild, and cannot casely be brought under subjection.

Its colours vary, though they are generally such as have been described.

It is common in Guiana, Brafil, and various parts of South and North-America.

It is called the Cayenne Cat, and is not fo frequent in temperate as in warm climates,

Lynx.—This animal differs greatly from every animal of the cut kind we have hitherto described. Its ears are long and erect, tusted at the end with long black hairs, by which this species of animals is peculiarly diffinguished: the hair of the body is long and soft, of a red-ash colour, marked with dusky spots, which differ according to the age of the creature; sometimes they are scarcely visible: its legs and seet are very thick and strong; its tail short, and black at the extremity; its cyes are of a pale-yellow colour; and its aspect softer and less servicious than that of the panther or the ounce. The skin of the male is more spatted than that of the female.

The fur is valuable for its softness and warmth, and is imported in great quantities from America and the north of Europe. In the United States there are three kinds of the lynx, each probably forming a distinct species. The first (Lupus Cervarius, Linn. 3d edit.) is called by the French and English Americans, Loup Cervier.* He is from two and a half to three seet in length; his tail is about five inches. His hair is long, of a light grey colour, forming, in some places, small, irregular, dark shades; the end of his tail is black; his fur is sine and thick. He is the lynx of Siberia and some of the northern Parts of Europe. A few may be found in the north-eastern parts of the district of Maine; but in the higher latitudes they are more numerous.

The fecond, (Catus Cervarius, Linn.) is called by the French Americans, Chat Cervier; and in New England the wild cat. He is considerably less than the former, or the Loup Cervier. He is from two to two feet and a half long; his tail is proportionably shorter, about three inches long, and wants the tust of black hair on the end of it. His hair is shorter, particularly his legs and feet; is of a darker colour, brown, dark salto.

[·] Pronounced Loocervee.

Kincajen.-This animal, Mr. family of cats; at least, he ver is about as large as a common agility and speed than for stre to the end, and is as long as h yellow. Between him and the He hunts in the same manner as but being able to suspend hims tail round the limb of a tree, o prey where other cats cannot; animal, his tail enables him to f the blood vessels of the neck. animals are very numerous, and deer, and do not spare even the n of none in the United States, e parts of New-Hampshire. Beaver. The beaver is the mc Its labours feem the refult of a fo tual convenience, preservation and regulated societies, a due subordina ordering and conducting each in tage of the whole; so, amongst th that, in forming their habitations of the work affigned to them, th:

of ground with a small rivulet running through it, they divide into companies: some are employed in cutting down trees of prest fize, which is done by gnawing them with their teeth : thele they lay across the dam with surprising labour and per-Everance, or form into piles, which others roll down to the water, where they make holes at the bottom for receiving the mds, and placing them upright, secure them in that position; whilst another party is engaged in collecting twigs, interweaving and twisting them with the piles, and thereby strengthening the work: some collect large quantities of earth, stones, clay md other folid materials, which they dispose of on the upper lide of the piles next the stream, forming a mound ten or twelve feet thick at the bottom, tapering gradually upwards, md capable of sustaining a considerable weight of water. The length of the dam, occasioned by this means, is sometimes not the than one hundred feet. Having completed the mole, their mext care is to erect their apartments, which are built on piles: they are of a circular form, and generally consist of two stories, mout eight feet high above the water; the first lies below the level of the dam, and is generally full of water; the other bove it. The walls are two feet in thickness, neatly plaistered with clay on the infide, which is arched like an oven, and at the top rejembles a dome. In each house there are two openings, one towards the water, to which the animal has always scoefs, in case of surprise; the other towards the land, by which it goes out in quest of food. The number of houses in me of these dams is from ten to twenty-five, some of them large enough to contain a family of twenty or thirty beavers. Each beaver forms its bed of moss; and each family lays in its mazine of winter provision, which consists of bark and bughs of trees: they pile up the latter with great ingenuity and regularity, and draw it out to their apartments as their rants require. They are said to be fondest of the sassaffaras, 2sh, and sweet gum. During summer, they seed on leaves, fruits and sometimes crabs or cray-fish; but fish is not their favourite bod. Their time of building is early in the summer. winter, they never go farther than to their provision stores, and, buring that scason, are very fat.

They breed once a year, and bring forth two or three at a inh.

Beavers are found chiefly in the northern parts

thousands of their skins are annually brought into Europe. They vary in colour; the most valuable are black with a deep fur; but the general colour is a chesnut brown, more or less dark. Some have been found entirely white, others spotted; but both these kinds are very rare.

The beaver is remarkable for the fize and strength of its cutting teeth, which enable it to gnaw down trees of great magnitude with ease. Its ears are short, and almost hid in the fur; its nose blunt, tail broad and flat, nearly of an oval form; and covered with scales; it serves not only as a rudder to direct its motions in the water, but as a most useful instrument for laying on the clay, pressing it into the crevices, and smoothing the outward covering; its fore seet are small, and not unlike those of a rat; the hind seet are large and strong, with membranes between each tee; its length, from nose to tail, about three seet; the tail is eleven inches long, and three broad.

The castor produced from these animals is found in a liquid state, in bags near the anus, about the fize of an egg. When taken off, the matter dries, and is reducible to a powder, which is only, of a sharp bitter taste, and a strong disagreeable smells. These bags are found indifferently in males and semales, and were somethy supposed to be the animal's testicles; which, when pursued, it was said to bite off, and by that means escape with its life.

The Otter.—Although the otter is not confidered by naturalifts as wholly amphibious, it is nevertheless capable of remaining a confiderable time under water, and can pursue and take prey in that element with great facility.

Its legs are very fhort, but remarkably strong, broad ar muscular; on each foot are five toes, connected by strong merbranes, like those of water fowl; its head is broad, of an oval form, and flat on the upper part; the body is long and roun and the tail tapers to a point: the eyes are brilliant, and placed in such a manner, that the animal can see every object that is above it, which gives it a singular aspect, very much resembling an eel or an asp: the ears are short and their orising

The colour of the otter is of a deep brown, with two fm-light foots on each fide of the note, and another under the chin.

This animal makes its nest in some retired spot by the second of a lake or tiver, under a bank, where it has an easy a second second access to the water, to which it immediately slies up on

the least alarm; and, as it swims with great rapidity, generally escapes from its pursuers.

It destroys great quantities of fish, and, in pursuit of its prey, has been onserved commonly to swim against the stream. As soon as the otter has caught a fish, it immediately drags it to the shore, devours a part as far as the vent, and, unless presed by extreme hunger, always leaves the remainder, and takes to the water in quest of more.

Otters are generally taken in traps placed near their landing places, where they are carefully concealed in the fand. When hunting with dogs, the old ones defend themselves with great obstuncy; they bite severely, and do not readily quit their hold where they have once fastened. An old otter will never give up while it has life, nor make the least complaint though wounded ever so much by the dogs, nor even when transfixed with a spear.

Otters are found in most parts of the world, with no great variation. They are numerous in North-America, and are common in Guiana, frequenting the rivers and marshes of that country. They are sometimes seen in great numbers together, and are so sierce, that it is dangerous to come near them. They live in holes, which they make in the banks of the rivers.

The otters of Cayenne are very large, weighing from minety to one hundred pounds. They frequent the large rivers of that country; their cry is loud, and may be heard at a great distance: they are of a dark brown colour; their fur is thorter than that of the beaver, and very soft.

Befide these there is an animal called *The Sea Otter*.—Vaft numbers of these animals inhabit the coast of Kamtschatka, and the numerous islands contiguous to it, as well as the opposite coasts of America; they are also found in some of the larger avers of South-America.

Their skins are of great value, and have long formed a confidenable article of export from Russia. They dispose of them to the Chinese at the rate of seventy or a hundred rubles tach, and receive in return some of their most valuable commodities.

The fur of the sea otter is thick and long, of a beautiful shining black colour, but sometimes of a silvery hue; the legs the thick and short; the toes joined by a web; the hind seet like those of a seal; length, from nose, to tail, sour seet two inches; tail thirteen, slat and pointed at the end; the largest of them weigh from seventy to eighty pounds.

and is of a fallow colour; but his fize, and the shades of his colour, vary in different parts of the country. Some have spots of yellow on the breast, others of white, and others have none. He keeps in forests chiefly on trees, and lives by hunting. He is found in the northern parts of North-America quite to the South sea; his skin is exceeding valuable.

Mink.—The mink is about as large as a martin, and of the fame form. The hair on its tail is shorter; its colour is generally black, and its fur coarser; some have a white spot under their throats, others have none. They burrow in the ground, and pursue their prey both in fresh and salt water. Those which frequent the salt water are of a larger size, lighter colour, and have inferior sur. They are sound in considerable numbers both in the southern and northern States, and in general wherever the martin is found.

Fifter.—In Canada he is called pekan, and in the American States frequently the black cat, but improperly, as he does not belong to the class of cats. He has a general resemblance to the martin, but is considerably larger, being from twenty to twenty-four inches in length, and twelve in circumference. His tail is a little more than half its length; its hair long and bushy: his fore legs about four inches and a half long, his hinder legs six inches; his ears short and round. His colour is black, except the head, neck and shoulders, which are a dark grey. He lives by hunting, and occasionally pursues his prey in the water. Found in the northern States, Canada, and Hudson's bay. Of each of the animals we have mentioned under this division, there are several varieties which have obtained different names, as the pekan, vison, &c.

Skunk.—This animal is about a foot and a half long, of a moderate height and fize. His tail is long and buffy: his hair long and chiefly black; but on his head, neck and back, is found more or less of white, without any regularity or uniformity. He appears to see but indifferently when the sun shines, and therefore in the day time keeps close to his burrow. As soon as the twilight commences he goes in quest of his food, which is principally beetles and other insects; he is also very fond of eggs and young chickens. His slesh is said to be tolerably good, and his sat is sometimes used as an emollient. But what renders this animal remarkable is, his being surnished with organs for secreting and retaining a liquor, volatile and said beyond any thing known, and which he has the power-

The Stifling, or Squash, which is the second variety, is searly of the same size with the skunk; its hair is long and of a seep brown colour; it lives in holes and clests of rocks, where she semale brings forth her young: it is a native of Mexico, and seeds on beetles, worms and small birds: it destroys poultry, of which it only eats the brains. When asraid or irritated a voids the same offensive kind of odour, which no creature sare venture to approach. Professor Kalm was in danger of seing suffocated by one that was pursued into a house where he sept; and it affected the cattle so much, that they bellowed strough pain. Another, which was killed by a maid-servant in a cellar, so affected her with its stench, that she lay ill for several days: all the provisions that were in the places were so minted with the smell, as to be utterly unfit for use. This is the coasse of Busson, of which we have given the figure.

Another variety is called the Conepate; it is somewhat smaller, and differs chiefly from the squash in being marked with five andled white lines, which run along its back and sides from and to tail.

It is a native of North-America. When attacked it briftles in its hair, throws itself into a round forin, and emits an odour which no creature can support.

The last of this pestiferous family which we shall mention is

Zerilla.—This animal is a native of New-Spain, where it is alled the mariputa: it is found on the banks of the river Imnoque; and, although extremely beautiful, is at the same ine the most offensive of all creatures. Its body is beautifully marked with white stripes upon a black ground, running from be head to the middle of the back; from whence they are crosed with other white bands, which cover the lower part of the mark and stanks: its tail is long and bushy, black as far as the middle and white to its extremity: it is an active and mischievems little animal; its stench is said to extend to a considerable listance, and is so powerful as to overcome even the pantiner of limerica, which is one of its greatest enemies.

Notwithstanding this offensive quality in these animals, they are frequently tamed, and will follow their master. They do not emit their odour, unless when beaten or irritated. They are frequently killed by the native Indians, who immediately at away the noxious glands, thereby preventing the sless, which is good eating from being intected. Its taste is said tearly to resemble the flavour of a young pig. The savage adding make purses of the skins.

The Coati, or Brazilian Weafel.—This animal has fome referblance to the bear, in the length of its hind legs, in the form of its feet, in the bushiness of its hair, and in the structure of its paws. It is small; its tail is long, and variegated with different colours; its upper jaw is much longer than the lower, and very pliant; its ears are rounded; its hair is smooth, soft and gloss, of a bright bay colour; and its breast is whitish.

It inhabits Brafil and Guiana, runs up trees very nimbly, etc. like a dog, and holds its food between its fore legs like a bear.

The Coati stands with ease on its hind feet. It is said to know its own tail, which it generally carries erect, and sweeps it about from fide to fide.

ANIMALS OF THE PADGER KIND.

The common European badge it only one found in America; for the animal of this genus, and called the American badger, is of the former. It is found in the neighbourhood of Hudfon's bay and Canada, as likewife in fome of the United States, but does not appear to be numerous.

ANIMALS OF THE OPPOSSUM KIND.

Virginian Off flum,-This animal has a long there pointed noie; luge, round, naked, and very thin ears, black, edged with pure white, imall, black, lively eyes; long fliff hairs each fide the note, and behind the eyes; face covered with short soft white hairs; space round the eyes dusky; neck very short, its fides of a dirry yellow; hind part of the neck and the back coveied with a hair above two inches long, foft but uneven, the bottoms of a yellowish white, middle part black, ends whitist; fines covered with duty and dufky hairs, belly with foft, woolly dirty white hair; legs and thighs black; feet dufky; claws white; bute of the tale clothed with long hairs like those on the back; rest of the rail covered with small scales, the half next the body black, the test white; it has a disagreeable appearance, looking like the body of a fnake, and has the fame prehenfile quality as that of fonce monkies; body round and very thick; legs thore; on the lower part of the belly of the female is a large pouch, in which the tests are lodged, and where the young inclier as form as they are born.

The utual length of the animal is, from the tip of the nofe to the base of the tail, about twenty inches; of the tail twelve inches.

Inhabits Virginia, Louisiana, Mexico, Brafil and Peru; is very destructive to poultry, and sucks the blood without eating the steps. I seeds also on roots and wild fruits; is very active in climbing trees, will hang suspended from the branches by its tail, and, by swinging its body, sling itself among the boughs of the neighbouring trees; continues frequently hanging with its head downwards; hunts eagerly after birds and their ness; walks very slow; when pursued and overtaken will seign itself dead; not easily killed, being as tenscious of life as a cat; when the female is about to bring forth, she makes a thick nest of dry grass in some close bush at the soot of a tree, and brings four, sive or fix young at a time.

As foon as the young are brought forth they take shelter in the pouch, or false belly, and fasten so closely to the teats, as not to be separated without difficulty; they are blind, naked, and very small when new-born, and resemble factuses; it is therefore necessary that they should continue there till they attain a perfect shape, strength, sight and hair, and are prepared to undergo what may be called a second birth; after which they run into this pouch as into an asylum in time of danger, and the parent carries them about with her. During the time of this second gestation, the semale shews an excessive attachment to her young, and will suffer any torture rather than permit this receptacle to be opened, for she has power of opening or closing it by the assistance of some very strong muscles.

The flesh of the old animals is very good, like that of a sucking pig; the hair is dyed by the Indian women, and wove into garters and girdles; the skin is very feetid.

Murine Oppossum.—This animal has long broad ears, rounded at the end, thin and naked; eyes encompassed with black; face, head, and upper part of the body, of a tawny colour; the belly yellowish white; the feet covered with short whitish hair; bees formed like those of the Virginian; tail slender, covered with minute scales, from the tip to within two inches of the base, which are clothed with hair. Length, from nose to tail, about eight inches; tail of the same length: the semale wants the salle belly of the former, but, on the lower part, the skin forms on each side a fold, between which the teats are lodged.

The species varies in colour. It inhabits the hot parts of South-America, agrees with the others in its food, manners, and the prehensile powers of its tail: it brings from ten to four-teen young at a time; at least, in some species, there are that number of teats; the young affix themselves to the teats as

feen together. It is very fierce, and will fight floutly with boatls of prey when attacked by them. The jaguar is its mortal enemy, and frequently lofes its life in engaging a number of these animals, for they affist each other whenever attacked.

They live chiefly in mountainous places, and are not fond of willowing in the mire like the common hog. They feed on fruits, roots and feeds; they likewife eat ferpents, toads and lizards, and are very dexterous in first taking off the skin with their fore feet and teeth.

It is somewhat smaller than the common hog; its body is covered with long bristles, which, when the creature is irritated, rise up like the prickles of a hedgehog, and are nearly as strong, they are of a dusky colour, with alternate rings of white; across the shoulders to the breast there is a band of white; its head is short and thick; it has two tusks in each saw; its ears are small and erect; and instead of a tail, it has a small sleshy protuberance, which does not cover its posteriors. It differs most essentially from the hog, in having a small orifice on the lower part of the back, from whence a thin watry humour, of a most disagreeable smell, slows very copiously.

Like the common hog, the peccary is very prolific. The young ones, if taken at first, are easily tamed, and soon lose all their natural serocity, but can never be brought to discover any signs of attachment to those that seed them.

Their flesh is drier and leaner than that of our hog, but is by no means disagreeable, and may be greatly improved by castration.

Although the European hog is common in America, and in many parts has become wild, the peccary has never been known to breed with it. They, frequently go together, and feed in the same woods; but hitherto no intermediate breed has been known to arile from their intercourse.

ANIMALS OF THE CAVY KIND.

Guinea-Pig, or Reftlefs Cavy.—This little animal is a native of Brafil, but lives and propagates in temperate and even in cold climates, when protected from the inclemency of the fatons. Great numbers are kept in a domestic state, and therefore we conceive any further observations are unnecessary.

Cabali.—This is a native of South-America, and lives on the of great rivers, such as the Oronoque, Amazons, and

Restricted to the property of the special property well, and is very dear to it we estern in the special property of the speci

2. the best of the state warm and mont places. It digs

boles in the ground, fecrets itself during the day, and goes out at night in quest of food.

It is a cleanly animal, and will not bear the finallest degree of dirtiness in its apartment. When pursued it takes to the water, and escapes by diving. If attacked by dogs it makes a vigorous defence. Its sless is esteemed a great delicacy by the natives of Brahl.

We think this animal might be easily naturalized in this country, and added to our stock of useful animals. It is not much afraid of cold, and being accustomed to burrow, it would by that means defend ittelf against the rigours of our winter.

There are several varieties of them, some of which weigh from fourteen to twenty, and even thirty pounds,

Agouti, or Long-nofed Cary.—This animal is about the fize of a hare; its note is long, upper lip divided, skin fleek and shinning, of a brown colour mixed with red, tail short, legs slender and almost naked; has four toes on the fore feet and three on he hind; grants like a pig, sits on its hind legs, and feeds ittely with its paws; and when satisfied with food it conceads the emainder. It ests fruits, roots, nats, and almost every kind or regetable; is hunted with dogs, runs fest, and its most in the ike these of a hare. Its slesh, which resembles that of a rabbit, a eater, by the inhabitants of South-America.

Great numbers of them are found in Guinna and B will. They ize it, woods, hedges and hollow trees.

The female brings forth at all times of the year, and proluces three, four, and fonctimes five at a time.

bough forewhat his, is nearly of the form form, but no red slonger. It inhabits the fame countries, is of in chancel in a table form is white, delicate, and has the flavour of a vening of the smuch effected by the natives, who hant it with any, and taken it among the finest game of South-America.

Ruck Cary.—This is likewise found in Bratil, is about to the necessing rength; the colour of the upper part of the body resembles that of the time; its belly is write; the upper individed; the ears flout and rounded like those of a ray and less no tail. It moves like the hare, its force less being flower hangine hind. It has four toes on the force for, and only three much kinds. Its fliffs is like that of the rabble, and resonance of living is also very finisher.

ANIMALS OF THE HARE EIND.

American Hare.—This animal is not more than helf the ze of the European large; his cars are tight with it is the gall.

GENERAL DESCRIPTION

neck and body mixed with cinereous, ruft colour, and black; the upper part of the tail black and the lower part white; the legs are of a pale ferruginous, and the belly white. This animal is found in all parts of North-America, fouth of New-Jersey it retains its colour all the year; but to the northward, in New-England, Canada and Hudson's bay, it changes at the approach of winter; its summer coat for one, long, soft, and filvery, the edges of its ears only preserving their colour. Its flesh is good, and is exceeding useful to those who winter at Hudson's bay, where they are taken in abundance.

Varying Hare.—This animal in fummer is grey, with a flight mixture of black and tawny; tail white, and the feet clothy and warmly covered with fur: in winter it changes to a fnowy white, except the tips and edges of the ears, which remain black: this change not only takes place in the cold bleak regions of the north, but when kept tame in flower warmed rooms. They are in America chiefly found about Hudfon's bay and Cook's river.

Brafilian Hare.—This animal has very large ears, a white ring round its neck, in every other respect the same as the common hare. It is found in Brasil and Mexico, and is very good for food.

Mr. Morfe mentions another species found in all the United States, which barrows like a rabbit; this he thinks to be peculiar to America. The rabbit, though it thrives well, particularly in South-America, was never found wild in any part of the American continent.

SLOTI.

Of all animals this is the most slaggish and inactive; and, if we were to judge from outward appearance, would feem the most helpleis and wretched. All its motions teem to be the effect of the most painful exertion, which hunger alone is expande of exciting.

It lives chiefly in trees; and having afcended one with infinite labour and difficulty, it remains there till it has entirely thripped it of all its verdure, sparing neitherr fruit, blossom nor teef; after which it is said to devour even the bark. Being unable to descend, it throws itself on the ground, and continues at the bettom of the tree till hunger again compels it to renew its toils in search of tublishence.

Its motionian accompanied with a most piteous and lamentable cry, which contins even beasts of proy, and proves its besidefence. Though flow, aukward, and almost incapable of motion, the floth is strong, remarkably tenacious of life, and capable of enduring a long abstinence from food. We are told of one that having fastened itself by its feet to a pole, remained in that stuation forty days without the least sustance. The strength in its legs and feet is so great, that, having seized any thing, it is almost impossible to oblige it to quit its hold.

There are two kinds of floths, which are principally diftinguished by the number of their claws; the one called the ai is about the fize of a fox, and has three long claws on each foot; its legs are clumfy and aukwardly placed; and the fore legs being longer than the hind, add greatly to the difficulty of its progressive motion; its whole body is covered with a rough coat of long hair, of a lightish-brown colour, mixed with white, not unlike that of a badger, and has a black line down the middle of the back; its face is naked, and of a dirty white colour; tail short, eyes small, black and heavy. It is found only in South-America.

The Unau has only two claws on each foot; its head is short and round, somewhat like that of a monkey; its ears are short, and it has no tail. It is found in South-America, and also in the inand of Ceylon.

The fiesh of both kinds is eaten. They have several stomaches, and are said to belong to the tribe of ruminating animals.

ANT-EATLE.

There are toward animals diffinguished by the common name of a retenties, which differ greatly in form. They are divided into three closses, viz. the Great, the Mullle, and the Lesser Ant-eacr.

The Great Antesity is nearly four feet in length, exclusive of its tail, which is two and a half. It is remark ble for the great length of its mout, which is of a cylindrical form, and fires as a flicitly to its long and flender tengue, which always lies folded double in its mouth, and is the chief influment by which it finds flictiflence.

This creature is a native of Brofil and Guiana, runs flowly, frequently fwins over rivers, lives wholly on ants, which it collects by thrufting its tongue into their holes, and having penetrated into every part of the neft, withdraws it into its mouth loaded with prey.

Its legs are to fitting, that few animals on extricate themselves from its quart. It is indute by termidable even to the partitions of America, and commercias fives right upon them in such a minner, that is that it then foll and perith tegether; for its obtained is one to that it will not extra do itself from its after the comparison of the comparison

The first has a firing disspecible tifts, but it is eaten by the Irin is.

The Metalle for the subject one foot form makes from note to the rate into two notes of countries, and procures its food in the rate of the asset of left. Its tell is ten inches long, with where it across its hold in clining trees by twining it round the countries.

Box their animals have four firong claws on the fore feet, and hire on the hird.

The Legar contractor has a sharp-pointed nois, inclining a little downwards; its ears regull, and hid in the for; it has two strong haked claws on the fore feet, the outward one bonds much the largest, and four on the hind feet; its fur is 1 mg, toli and filky, of a yellow-sh brow of hur; its length, from the earth, is reconsinches and a half, toll above eight, the cost the law, and typer to the end. It which is Guiana; the batters we qualities a species of airs which balls that ness some

ASSIMATE OF THE PORCUPING KIND.

For the Promplet—This sale of is very deferrer from that he made in special emilies the name of percupines. fometimes leave it in the hands of its purfuers: to avoid this the hunter has recourse to artifice, and by tickling it with a stick it gives up its hold, and suffers itself to be taken aire. If no other means of escape be left, it rolls itself up with its covering by drawing in its head and legs, and bringing at tail round them as a band to connect them more forcibly together: in this situation it sometimes escapes by rolling itself over the edge of a precipice, and generally falls to the bottom ashart.

The most successful fnares laid for them by they frequent. They all feldom stir out, except fearch of food.

To give a minute d the armadillos would be posed of a number of parts. f catching armadillos is by rivers or other places what ary deep in the ground, and he night, whill they are in

f the shells or coverings of difficult, as they are all conng greatly from each other

in the order and disposition of the figures with which they are authinguisted a but it may be necessary to observe, that in general there are two large pieces that cover the shoulders and the ramp, but remarks in a figurent kinds. There bands are not unlike thosem that the first and, being flexible, gives way to the methods of the unimal. The first we shall mention is the

Fig. 1. It is about twelve inches long, with three bands in the middle 4 the cruft on the head, back and ramp, is divided into a number of clegant raised figures, with five angles or fides; its tail is not more than two inches longs it has neutring coating nor canine teeth, and has the tails on each foot.

tween the folds of the bands there are a few deathered hairs; its tall is long, that are the bands there and tapers to a point. It is found in Britis and Guisna.

Lip whichel are call.—In ears are long and upright, eye finall and blocks; it has four mes on the fore feet and five of the hind; its length, from mole to tail, is about ten inches, the tail nine. It in a sets Braill, and is reckened more delicious cating than the others.

After later the field on the frontlers and tump is marked with hexangular liquids; the breaft and belong are covered with long hairs; no take long, and taper, and the whole anotherized force feet in length.

One of this kind was brought to England a few years ago from the Musquito shore, and lived some time. It was fed with raw beef and milk, but refused to eat our fruits and grain.

The Kabaffen is furnished with twelve bands, and is the largest of all the armadilios, being almost three feet long from nose to tail; the figures on the shoulders are of an oblong form, those on the rump hexangular. It is feldom eaten.

Weafel-headed Armedillo, so called from the form of its head, which is slender, has eighteen bands from its shoulder to its tail; the shell is marked with square figures on the shoulders, those on the legs and thighs are roundish; the body is about fifteen inches long, tail five.

All these animals have the power of drawing themselves up under their shells, either for the purpose of repose or insety. They are furnished with strong laterel muscles, consisting of numberless fibres, crossing each other in the form of an X, with which they contrast themselves so powerfully, that the strongest man is scarcely able to force them open. The shells of the larger armadillos are much stronger than these of the smaller kinds; their sless likewise harder and more unsit for the table.

ANIMALS OF THE MARMOT EIND.

Quebec Marmet.—This animal is called in the United States—the woodchuck; his body is about fixteen inches long, and nearly the fame in circumference; his tail is moderately long and full of hair; his colour is a mixture of fallow and grey. He digs a burrow in or near fome cultivated field, and feeds on pulle, the tops of cultivated clover, &c. He is generally very fat, excepting in the fpring. The young are good ment, the old are rather rank and differences. In the beginning of October they retire to their burrows, and live in a torpid state about six months. In many respects he agrees with the marmot of the Alps, in others he differs, and on the whole is probably not the same.

An animal refembling the woodchuck is found in the fouthern flates, which is supposed to form unother species, it is called the Maryland Marmot.

Besides the above there are three other species of this gen found in America, the Hoary, the Tail-less, and the Earl Marmot; the two sormer are found in the northern part continent, and the latter on the western side only.

GENERAL DESCRIPTION

ANIMALS OF THE SQUIRREL KIND.

Fox Squirrel,—Of this animal there are feveral varieties, blick, red and grey. It is nearly twice as large as the common grey fquirrel, and is found in the fouthern States, and is possible to the American continent.

Grey Squirrel.—The grey squirrel of America does not agree exactly with that of Europe, but is generally considered to of the same species. Its name indicates its general colours but fome are black, and others black on the back and grey on mols in a hollow tree, and the fides. They make a here they deposit their pic of nuts and acorns; this is the place of their residence during the winter, and here they bring forth their young. r fummer house, which is built of flicks and leaves, is pa ted near the top of the tree. They fometimes migrate in erable numbers. If in their courfe they meet with a each of them takes a flingle, piece of bark, or the like, and carries it to the water: thus equipped they embark, and erect their tails to the gentle beene, which from wefts them over in fafety; but a fudden Il.w of wind tometimes produces a destructive shipwreck. The greater part of the anales of this facties is found callrated, Tribey are found from New-England to Chili and Peru. A gasy toping I is found in Vinginia nearly twice as large as the twhether it be the lame, or a different species, is un-Children.

The Spaces. — This is less than the grey squired. It has a result along its back, every on its tides, and white under the body. It adders in some rejects from the common European spaces; but M. de Dation combons it is the same species. It reads the slame as text of the grey in tirel, except that it sometimes ; mass on the fields of the pine and other evergreens; hence it is sometimes called the pine squired, and is found in general farther to the northward than the grey squired. It is made pine of its same on trees in quest of food; but considers its most, a near than tree keeps to the home.

strond of and -- this is and less than the left mentioned; its colour is a try a has a narrow thrope of block along its back; at the collabor of about help at incident each fine is a ftripe of while, toucher i wall we merrow thropes of block; its bely towards. In the value translations are brighter and better defined than in the translation. It is tronslating a delet a moufe fquirrel and go and a contact, from its following a burrow in loose ground. In the collaboration and marks from the following a burrow in loose ground.

the north of Asia; but that animal is represented as in some nearure resembling the mouse, whereas this is a genuine squirrel. In the summer it feeds on apples, peaches, and various kinds of fruit and seeds, and for its winter store lays up nuts, accords and grain. It sometimes ascends trees in quest of food, but always descends on the appearance of danger; nor does it feel secure but in its hole, a stone wall, or some covert place. Found in the northern and middle States.

Flying Squirrel.—This is the most singular of the class of squirrels. A duplicature of the skin connects the fore and hinder legs together; by extending this membrane it is able to leap much farther, and to alight with more safety than other squirrels. It lives in the holes of trees and seeds on seeds. Is found in general from the southern parts of Hudson's bay to Mexico.

Bendes the above, there are feveral other varieties of this genus, some peculiar to the whole continent, and some to particular parts, from whence they have been named, as the Hudson's bay squirrel, varied squirrel of Mexico, Mexican squirrel, Brasslian squirrel, &c.

Striped Dermoufe,—Of this genus of animals, called fometimes garden squirrels, we believe there is only one species known in North-America, viz. the striped dormouse, which is exceeding plenty throughout all the forests.

ANIMALS OF THE RAT KIND.

Of this genus of animals America produces various species, two or three only of which we shall notice.

Mufquash, or musk rat of Canada. This animal is about the fize of a young rabbit; its head is thick and short, resembling that of a water rat; its hair soft and glossy; beneath the outward hair there is a thick fine down, very useful in the manufacture of hats; it is of a reddish brown colour; its breast and belly alh, tinged with red; its tail is long and flat, covered with scales; its eyes are large, its ears short and hairy; it has two strong cutting teeth in each jaw, those of the under jaw are about an inch long, but the upper ones are shorter.

This animal is a native of Canada, where it is called the Ondatra.

In many respects it very much resembles the beaver, both in form and manners. It is fond of the water and swims well. At the approach of winter several families associate together. They build little huts, about two seet in diameter, composed

of hubs and rushes connected with clay, forming a dome-like covaring a from the laster feveral passages, in different directions, ty which any no out in quest of roots and other food. The leasters that the pring, by opening their holes, and laring in the questional decided upon them. At that time their flesh is the subty good, and is frequently eaten, but in the summer it and the sum of mass, to strong as to render it perfectly upon only.

When with—This is a very curious animal; not half the fize of a denestic rat; of a dark brown or black colour; their tails thinder and flact in proportion, and covered thinly with thort han. They are translar with respect to their ingenuity and great labour in confincting their habitations, which are conical pyramials, about three or four feet high, confinited with dry branches, which they collect with great labour and perfeverance, and pive up without any apparent order; yet they are form terwoven with one another, that it would take a bear or a wild cat fone time to pull one of these castles to pieces, and allow the animals fufficient time to retreat with their young.

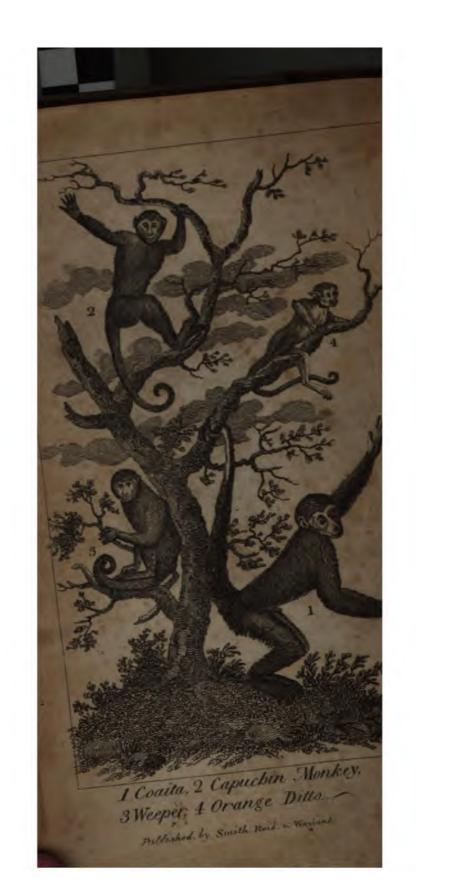

There is Likewith a ground rat, twice as la go as the common rat, which barrows in the ground, Buttern's I in Pr.

Shrew hour,—This is the mallest or quadrapeds, and holds nearly the rone place among them as the numbing hird does among the restrict frace. Their heal, which conflictes about one through each whole length, has tone relevablence to that or a moder, the ears are wanting their eyes fearedly visible; the node very long, pointed, and familihed with long hairs. In other religible trees retemble the common moure. They live in woods, and are apposed to feed on grain and intests. Different species of their are terms in Braill, Mexico, Carolina, New-English, and Hamon's pay.

Mch.—The Purple Mole is found in Virginia; the Black 21-11 in New-England; he lives in and about the water: they direct to accure an one; and both from the Lonopean. There is three other species found about New-York, viz. the Long-tolea, the Kadates, and the Brown; the former is also found in the interior of Haddon's day.

ANIMALS OF THE MONKEY KIND.

The months of America are distinguished by M. Buffon by the general names of Supplemental Supplements, they have nother crack planches and other by characters peculiar to each.

OF AMERICAN QUADRUPEDS.

The fapajou is furnished with a prehensile tail, the under part of which is generally covered with a smooth naked skin; the animal can coil it up or extend it at pleasure, suspend itself by its extremity on the branches of trees, or use it as a hand to lay hold of any thing it wants. The tails of all the sagoins, on the contrary, are longer than those of the sapajous, straight, slaceid, and entirely covered with hair. This difference alone is sufficient to distinguish a sapajou from a sagoin.

Ouarine, or Preacher.—This is the largest of all the American monkies, being about the size of a large fox; its body is covered with long smooth hair, of a shining black colour, forming a kind of rust round the animal's neck; its tail is long, and always twisted at the end.

Great numbers of these monkies inhabit the woods of Braft, and Guiana, and, from the great noise they make, are called Howling Monkies. Several of them assemble together, one placing himself on a higher branch, the rest placing themselves in a kind of regular order below him; the first then begins as though to harangue with a loud tone, which may be heard at a great distance; at a signal made with his hand, the rest join in a general chorus, the most dissonant and tremendous that can be conceived; on another signal they all stop, except the first, who sinishes singly, and the assembly breaks up,

These monkies are very sierce, and so wild and mischievous, that they can neither be conquered nor tamed. They seed on fruits, grain, herbs, and sometimes insects; live in trees, and leap from bough to bough with wonderful agility, catching hold with their hands and tails as they throw themselves from one branch to another.

There is a variety of this species of a ferruginous or reddifficulty, which the Indians call the Royal, or King Monley: It is as large and noify as the former. This is eaten by the nitives, and sometimes by the Europeans, and deemed exsellent food.

Contra.—This animal is fomewhat less than the ouarine; its body and limbs are long and flender, hair black and rough, tail long, and naked on the under fide near the end. It has a long flat face of a swarthy colour, its eyes sunk in its head, and its cars resembling human; it has only four singers on the being destitute of the thumb.

and Peru. Great numbers affociate together; they felppear on the ground, but live mostly in trees, and feed on fruits; when these are not to be had, they are said to est fishes, worms and insects; are extremely dexterous in catching their prey, and make great use of their tails in seizing it.

They are very lively and active. In passing from one tree to another, they sometimes form a chain, linked to each other by their tails, and swing in that manner till the lowest catches hold of a branch, and draws up the rest. When fruits are ripe, they are generally fat, and their sless is then said to be excellent.

There are many varieties of the coaits, which differ chiefly in colour; fome are totalls

white hair on the und

spider Monkies by Edw

derness of their legs and taus.

M. Buffon supposes the question of the same of the same of the same of the same of the same of the same of the same of the same of the same with that of the cosita, and it inhabits the same countries.

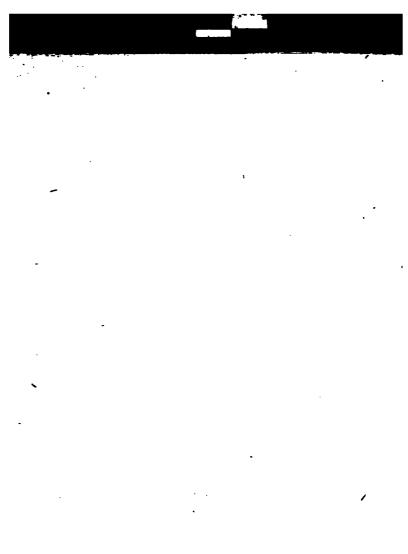

Super, or Capachin.—There are two varieties of this species the brown and the grey, which, in other respects, are perfectly finisher. Their faces are of a flesh colour, thinly covered with down; talls long, full of hair on the upper fide, naked below, and presentle; bands black and naked; length of the body about two live lineses.

These anomals inhabit Guiana, are extremely lively and agile, and their conflatation feems better adapted to the temperate character of Europe than most of the fapajou kind. M. Buffon a much a few instances of their having been produced in Fince.

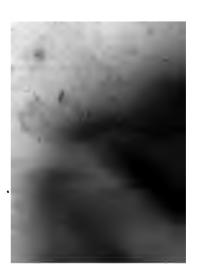

The rejous are very capticious in their attachments, being food of particular persons, and discovering the greatest aversion to etions.

See, or Recher, inhabite Brafil, is very mild, docide, and timide of a grave and harrons alpett, has an appearance of weeping, and where initiated, makes a plaintive notice. It is about four-tiers include long, the tail longer than the body; hair on the back and fides of a deep brown colour, mixed with red on the lower part. There is a variety with hair on the throat and broad.

Creat non-bern of these creatures off inble together, particulty in fishing weather, and make a great chattering; they live much in these which bear a podded fruit is large as beans, on the sentences, sentences, sentences, sentences.

OISTITL.

NARI. PINCHE . Saimiri, or Orange Monkey.—This is a most beautiful animal, but so extremely delicate, that it cannot well bear to be brought from its own climate to one less warm and temperate.

It is about the fize of a squirrel; its head is round, eyes remarkably lively and brilliant, ears large, hair on the body short and fine, of a shining gold colour, feet orange, its tail is very long; its prehensile faculty is much weaker than the rest of the sapajous, and on that account it may be said to form a shade between them and the sagoins, which have long tails, entirely covered with hair, but of no use in suspending their bodies from the branches of trees or other objects.

. Mico, or Fair Monkey.—This is the most beautiful of all this mammerous race of animals. Its head is small and round; face and ears of so lively a vermillion colour, as to appear the effect of art; its body is covered with long hair, of a bright filvery whiteness, and uncommon elegance; tail long, and of a shining dark chesnut colour.

It frequents the banks of the river of Amazons, where it was discovered by M. Condamaine, who preserved one alive till almost within fight of the French coast, but it died before its arrival.

Oistiti, or Cagui.—This is a small animal, its head and body not exceeding seven inches in length; its tail is long, bushy, and, like that of the macauco, marked with alternate rings of black and ash colour: its face is naked, of a swarthy sless colour; ears large, and like the human, with two very large tusts of white hairs standing out on each side; the body beautifully marked with dusky, ash coloured, and reddish bars; its nails are sharp, and its singers like those of a squirrel.

The oustiti inhabits Brasil, feeds on fruits, vegetables insects, and snails, and is fond of fish.

Saki.—Sometimes called the Fox-tailed Monkey, because its tail, like that of the fox, is covered with long hair. Its body is about seventeen inches in length; hair long, of a dark brown pelour on the back, lighter on the under fide; its face is tawny, and covered with a fine short whitish down; the forchead and sides of the face are white; its hands and feet are black, with claws instead of nails; is a native of Guiana, where it is called the saccawinkee.

Pinche, or Red-tailed Monkey.—This is somewhat larger than the outliti. It is remarkable in having a great quantity of white smooth hair, which falls down from the top of its head on each side, forming a curious centrast with its sace, which is black, thinly covered with a fine grey down; its eyes are black and

lively; throat black; hair on the back and shoulders of alight reddish brown colour; breast, belly, and legs, white; the till is long, of a red colour from the rump to the middle, from thence to the end it is black.

The pinche inhabits the woods on the banks of the river of Amazons; is a lively, beautiful little animal; has a lost whistling voice, resembling more the chirping of a bird that the cray of a quadruped. It frequently walks with its long till over its back.

Marikina.—This is by some called the Lion Ape, from the quantity of hair which surrounds its face, falling backwards like a mane; its tail is also somewhat bushy at the end; its face is flat, and of a dull purple colour; its hair long, bright, and silky, from whence it is called the Silky Monkey; it is of a pale yellow colour on to the ly; the hair round the face of a bright bay, inclining to the lits hands and feet are without hair, and of the same colour as the face; its body is the inches long, tail thirteen.

This creature is a native of Guiana, is very gentle and lively, and feems to be more hardy than the other tagoins: Buffor five, that one of them lived at Paris feveral years, with no other precaution than keeping it in a warm room during winter.

Tamerin.—This is the fize of a squired; its face is niked, of a swinter flesh colour; its appear hip somewhat divided; its cuts are very large and erect, from whence it it called the Great cared Menkey; its hair is soft, shaggy, and of a blick colour; hands and seet covered with crange coloured hair, very fine and smoothe; its nails long and crooked; tail black, and twice the length of its body.

The tanner inhabits the hotter parts of South-America: is a lively, pleafant animal, calify tamed, but so delicate, that it can be bear a removal to a less temperate climate.

Most of the above going from to be more particularly natives of South-America, but they are likewise faid to be found on the lower parts of the Millistippi.

PINNALL D QUADRUPEDS.

Walrus, or Sea herf.—There are feveral animals whose referee is almost constantly in the water, and which seem to be greatly of the nature of fishes, they are nevertheless d by naturalists under the denomination of quadrupeds; being perfectly amphibious, living with equal ease on the ras on land, may be considered as the last step in the scale

nature, by which we are conducted from one great division the animal world to the other. Of these the walrus is the ost considerable; it has a round head; small mouth; very sick lips, covered above and below with pelluced brittles as sick as a straw; small shery eyes; two small orifices instead of ars; short neck; body thick in the middle, tapering towards he tail; skin thick, wrinkled, with short brownish hairs thinly lisported; legs short, sive toes on each, all connected by webs, and small nails on each; the hind sect very broad; each leg cosely articulated; the hind legs generally extended on a line with the body; tail very short; length, from nose to tail, sometimes eighteen sect, and ten or twelve round in the thickest part; the teeth have been sometimes sound of the weight* of twenty pounds each.

They inhabit the coast of Spitzbergen, Nova Zemble, Hudson's bay, and the gulph of St. Lawrence, and the Icy sea, as far as cape Tschuktschi, and the islands off it, but does not extend fouthward as far as the mouth of the Anadyr, nor are any feen in the islands between Kamschatka and America: they are gregarious; in some places appear in herds of hundreds; are thy animals, and avoid places which are much haunted by mankind; t are very fierce; if wounded in the water, they attempt to fink the boat, either by rifing under it, or by striking their great teeth into the fides; roar very loud, and will follow the boat till it gets out of fight. Numbers of them are often feen fleeping on an island of ice; if awakened, fling themselves with great impetuolity into the sea, at which time it is dangerous to approach the ice, lest they should tumble into the boat and overset it; do not go upon the land till the coast is clear of ice. At particular times, they land in amazing numbers; the moment the first gets on shore, so as to lie dry, it will not stir till another comes and forces it forward by beating it with its great teeth; this is served in the same manner by the next, and to in succession till the whole is landed, continuing tumbling over one another, and forcing the foremost, for the lake of quiet, to remove further up.

^{*}Teeth of this fize are only found on the coast of the Icy sea, where the animals are seldom molested, and have time to attain their full growth. Historical states, 120.

[†] In 1608, the crew of an English vessel killed on Cherry isle above nine dred Walruses in seven hours time; for they lay in heaps, like hogs huddled upon another. Marten's Spi'sberg. 181, 182.

376

They bring one, or at most two young at a time; feed of fea herbs and fish, also on shells, which they dig out of the fand with their teeth; are said also to make use of their teeth to ascend rocks or pieces of ice, fastening them to the crack, and drawing their bodies up by that means. Besides manking, they seem to have no other enemy than the white bear, with whom they have terrible combats, but are generally viderious.

They are killed for the fake of the oil, one animal producing about half a ton.

Seal.—Of this genus there are feveral species, all of which there is no doubt, are found on some part of the coal of America.

Whale-tailed Manati.—This animal in nature fo nearly approaches the cetaceous tribe, that it is merely in conformity to the fyftematic writers, that it is continued in this class; it fence deferves the name of a biped; what are called feet are little more than pectoral fins; they ferve only for fwimming; they are never uted to affilt the animal in walking or landing, for it never goes afhore, nor ever attempts to climb the rocks, like the walt us and teal. It brings forth in the water, and, like the whale, tackles its young in that element; like the whale, it has no voice, and, like that animal, has an horizontal broad tail in form of a crefeent, without even the rudiments of hind feet.

Inhabits the feas about Bering's and the other Aleutian iflands, which intervene between Kamtchatka and America, but never appear off Kamtchatka, unless blown affore hy a tempest. Is parabably the same species which is found above Mindanao, but as certainly that which inhabits near Rodriguez, vulgarly called Diego Reys, an island on the east of Mauritius, or the isle of France, near which it is likewise found.

They live perpetually in the water, and frequent the edges of the shores; and in calm weather swim in great droves near the mouths of rivers; in the time of sleed they come so near the find, that a person may stroke them with his hand; if hur, they swim out to sea, but presently return again. They live in similies, one near another; each consists of a male, a semale, a half-grown voring one, and a very small one. The semale obtige the young to swim before them, while the other old ones for round, and, as it were, guard them on all sides. If the semale is attacked, the male will defend her to the utmost, and if she is killed, will follow her coupse to the very shore, and swim for some days near the place it has been landed at.

They copulate in the fpring, in the same manner as the huum kind, especially in calm weather, towards the evening. The semale swims gently about; the male pursues, till tired with wantoning, she slings herself on her back, an: admits his emances.* Steller thinks they go with young above a year; it is tertain that they bring but one young at a time, which they sockle by two teats placed between the breasts.

They are vastly voracious and gluttonous, and feed not only on the fuci that grow in the sea, but such as are slung on the edges of the shore. When they are all silled they fall askeep on their backs. During their meals, they are so intent on their food, that any one may go among them and chuse which he likes best.

Their back and their fides are generally above water, and as their skin is filled with a species of louse peculiar to them, numbers of gulls are continually perching on their backs, and picking out the insects.

They continue in the Kamschatkan and American seas the whole year; but in winter are very lean, so that you may count their ribs. They are taken by harpoons sastened to a strong cord, and after they are struck, it requires the united sorce of thirty men to draw them on shore. Sometimes, when they are transfixed, they will lay hold of the rocks with their pawa, and slick so sast to leave the skin behind before they can be forced off. When a Manati is struck, its companions swim to its assistance; some will attempt to overturn the boat, by getting under it; others will press down the rope, in order to break it; and others will strike at the harpoon with their tash, with a view of getting it out, which they often succeed in. They have not any voice, but make a noite by hard breathing, lake the sacrting of a horse.

They are of an enormous fize; some are twenty-eight seet long, and eight thousand pounds in weight; but if the mindanao species is the same with this, it decreases greatly in fize as it advances southward, for the lingest which. Dan pier saw there, weighed only six hundred pounds. The head, in prepartion of the bulk of the animal, is small, obling, and alm it square; he nostrils are filled win shore bradies; the gape, or rictus, is mall; the lips are double; near the junction of the two jaws he mouth is full of white tubilar wriftles, which serve one same

^{*} The leaning and unfine fails capalare in the fine manner, only after sports in the featfur four family they come on there for tool purpose.

use as the laminæ in whales, to prevent the food running out with the water; the lips are also full of bristles, which leve instead of teeth to cut the strong roots of the sea plants, which shorting ashore are a sign of the vicinity of these animals. In the mouth are no teeth, only two slat white bones, one in each jaw, one above, another below, with undulated surfaces, which serve instead of grinders.

The eyes are extremely small, not larger than those of a sheep; the iris black; it is destitute of ears, having only two or fices, to minute that a quill will fearcely enter them; the tongue is pointed and fmall; the neck is thick, and its junction with the head scarce distinguishable, and the last always hangs down. The circumference of the body near the shoulders a twelve feet, about the belly twenty, near the tail only four lett e gat; the head thirty-one inches; the neck near feven feet; and from thele measurements may be collected the deformity of this animal. Near the shoulders are two feet, or rather find, watch are only two feet two inches long, and have neither tingers nor nails, beneath are concave, and covered with hard to ; the total is think, flying, and horizontal, ending in a diff block fin, and like the ribitance of whalebone, and much filt in the terriport and algority forked, but both ends are of equal Isomon, ikomstefa while.

The main very their, shock, and full of inequalities, like the back of oak, and to must as tearcely to be out with an ax, and must have a first tenouth the filin is a thick blubber, which costs like odes of almonds. The fields is coarier than book, and will not took partefy. The young ones take like valid the main is used for thoses, and for covering the fides of book.

The Phath and will this animal morikala korowa, or ica cow; and kappeted core acces of herbs.

Manual of January.—The head of this animal langs downward; the lead are furnished with five toes; body almost to the toll of an uniform tancking s; near its junction with that part grows and many than; tail that, and in form of a spatula, thickes in the middle, growing tunner towards the edges.

Intuities the expression for of Galana; it grows to the length of fixed an or continue that; is covered with a dufky fkin with a few in air. Inside measured by Dampier were ten or twelve fee to it. In the chief that wenty inches in length, fourteen in breadth, for it of the fields in the intelle, two at the edges; the largest twice in the manufact pounds; but they arrive at far greater and the fields.

Oronoko Manati.—This is the species to which M. de Buffon ias in his supplement given the name of Le petit Lamantia de Amerique, and says it is found in the Oronoko, Oyapoc, and the rivers of Amazons. Father Gumilla had one taken in a distant take, near the Oronoko, which was so large that twenty seven men could not draw it out of the water: on cutting it open, he found two young ones which weighed twenty sive pounds appiece.

We suspect that the manati of the Amazons, &c. never visit the sea, but are perpetually resident in the fresh waters.

These animals abound in certain parts of the eastern coasts and rivers of South-America, about the bay of Honduras, some of the greater Antilles, the rivers of Oronoque, and the lakes formed by it; and lastly in that of the Amazons, and the Gualelaga, the Pastaca, and most of the others which fall into that vast river: they are found even a thousand leagues from its mouth, and feem to be stopt from making even an higher advance, only by the great cataract, the Pongo of Borja. They sometimes live in the sea, and often near the mouth of some river, into which they come once or twice in twenty-four hours, for the take of brouzing on the marine plants which grow within their reach; they altogether delight more in brackish or sweet water, than in the salt; and in shallow water near low land, and in places secure from surges, and where the tides run gently. It is faid that at times they frolic and leap to great heights out of the water. Their uses were very considerable to the privateers or buccaniers in the time of Dampier. Their flesh and fat are white, very sweet and salubrious, and the tall of a young female was particularly effeemed. A fuckling was beld to be most delicious, and eaten roasted, as were great pieces cut out of the belly of the old animals.

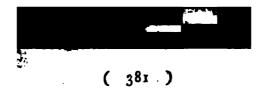

The skin cut out of the belly, for that of the back was too blick, was in great request for the purpose of fastening to the ides of canoes, and forming a place for the intertion of the ars. The thicker part of the skin, cut fresh into lengths of we or three feet, serves for whips, and become, when dried, stough as wood.

Befides these, an animal has been discovered on the coast of merica to which the name of Sea Ape has been given; but appears to have been seen in only one solitary instance, and erefore it appears unnecessary, except in a professed history of imals, to add any account of it.

arom whence it has very fignificantly been east.

which are found in different parts of the continent o rica. See Birds.

HISTORY OF THE

IRDS OF AMERICA.

following account of the birds of America, nothing attempted than an enumeration of the species of the genera found on that continent; the division and Mr. Pennant is followed, and descriptive characters of us, in general attended to. As it was impossible in a this kind to enter into a description of the different each genus, we hope the method adopted will prove ceptable and advantageous than a mere catalogue of pular or systematic names.

DIV. I. LAND-FOWL.

ORDER I. RAPACIOUS.

traight, hooked only at the end; edges cultrated, base with a thin skin.—Nostrils, differing in different speongue, large and sleshy.—Head, cheeks, chin, and often ther naked or covered only with down or short hairs; retractile.—Claw, often hanging over the breast.—I feet, covered with g eat scales; the first joint of the oe connected to that of the outmost by a strong mem-Claws, large, little hooked, and very blunt.—Infides rings covered with down.

GEN. 1. VULTURE.

cters.—Bill, straight, blunt at the tip.—Head, featherered behind with naked skin or soft down.—Neck, re--Legs, covered with scales.—The first joint of the e connected to the outermost by a strong membrane. is genus there are five species in America, three of the found in the United States, and the other two in merica.

GEN. 2. FALCO.

Character.—Bill, hooked, furnished at its base with a strong membrane or cere.—Head and neck covered with seathers.—Legs and feet covered with scales. Middle toe connected with the outmost by a strong membrane.—Claws, long, much booked, that of the outmost toe the least.—Female larger than the male.

This genus admits of four divisions, of which there are in America as follows: eagles, ten species; hawks, fifteen; falcons, thirteen; kites, two; these some are peculiar to South-America, others to the North, and some common in both.

GEN. 3. STRIX.

Character.—Bill, hooked, without a cere.—Nestrils, oblong.—Fyes, very large and protuberant, surrounded by a circle of feathers.—Head, large, round, and full of feathers.—Ears, large and open.—Outmost toe versatile.

This genus contains the owls, which are ranged in two divitions, electrical and the earlifs; of the former there are three freedes, and of the latter fourteen species known in America.

ORDER II. FIES.

CIN. 1. LANIUS.

This genus includes a class of birds that form the connecting link between the rapacious birds of the preceding order and the pies; they are called Shrieks, or Butcher birds; their bills are itialght, hocked only at the ends...-Tongue jagged at the point...-Tess divided at the origin...-And tail cuneiform. Of this genus there are fourteen species known in America and the Welt-India.

GLN. 2. PISTFACUS.

This genus contains the whole race of parrots, parroquets, &c. Bil', hooked from the bate: upper mandible moveable.— Noffrils, round, and placed in the bate of the bill.—Tongue, broad and blunt at the end.—Head, large; crown flat.—Legs, thort.—Too, two backward and two forward. Of this there are nearly fifty species known in South-America, and we believe only one or two in North-America.

CEN. 3. RAMPHOSIOS.

The character of this genus is... B.ll, exceeding large, hollow, convex, terrated outwards: both mandibles curved at the tip.... Nothils, finall and round, placed close to the head....

Tongue, long, and feathered on the edges,--- Feet in most of the species, scansory. It contains the Toucans and Motmots; of the former there are nine species, and of the latter only one; they are supposed to be peculiar to South-America.

GEN. 4. CROTOPHAGUS.

The characters of this genus are...Bill, compressed, greatly arched, half oval, thin, cultrated at the top....Noslivils, round..... Tees, two backward and two forward....Ten feathers in the tail.

The only bird in this genus is the Ani, of which there are only two species; it is, we believe, peculiar to America.

GEN. 5. CORVUS.

Bill, strong, upper mandible a little convex, edges cultrated.

- Nostrils, covered with bristles, reslected over them.--Tongue,
- divided at the end.---Toes, three forward and one backward,
- middle joined to the outmost as far as the first joint. This
- middle joined to the outmost as far as the first joint. This
- most of which occur in every climate. There is one species
- the raven; four of the crow; four of the daw; fix of the
- indies.

Found in America and the
- west-Indies.

GEN. 6. CORACIAS.

Bill, straight, bending a little towards the end, edges cultrated.---Nostrils, narrow and naked.---Toes, three forward, divided to their origin; one backward. This genus contains the Rollers, of which there are two species found in South-America.

GEN. 7. ORIOLUS.

Bill, straight, conic, very sharp-pointed, edges cultrated, inclining inwards, mandibles of equal length,—Nofiris, small, placed at the base of the bill, and partly covered,—Toogoo, divided at the end,—Toos, three forward and one backward; the middle joined near the base to the outmost one behind. The Oriolus are in general inhabitants of Auctica; there being twenty-seven species enumerated on that continent, out of formsive, all that are known.*

Of this genus the Baleimore Oriole d ferros particular notice; the head, seek and upper part of the back of the male, is defended to be black; lefter coverts of the wings orange; the greater black, tipt with white; the lead, belly, lower part of the back, and coverts of the tan, or a bridge energy; the primaries dufky, edged with white; the two middle feathers or the ball black; the lower part of the fame colour, the remaining part orange; and the legs black. The head and back of the female is orange, edged with pale brown; the coverts of the wings of the same colour, marked with a fingle bar

GEN. 8. GRACULA.

Bill, convex, knife shaped, somewhat maked at the base.

Tongue, entire, somewhat enlarged and sleshy, sharp at the end

- Nostrils, small, near the base of the bill.—Tors, three forward, one backward the middle connected at the base to the outmost.—Claws, hooked and sharp. Of the Gracle, which form this genus, there are about twelve species, none of which are found in Europe, and only four or five known in America.

GEN. 9. TROGON.

This genus embraces a class of South-American birds, inhabiting Cayenne and Brasil, of which there is only three species. They have the bill short, thick and convex.—Nostrils, covered with thick bristles.—Toes, two backward and two forward— Legs, feathered down to the toes—and the tail consisting of twelve feathers.

GEN. 10. BUCCO.

The Tamitia, or Barbets, that conflitute this genus, are likewise chiefly South-American birds; on that part of the continent there are feven species found, but none to the North. The bill of this bird is strong, straight, bending a little towns the point; base, covered with strong bristles, pointing downwards.—Norths, hid in the feathers.—Toes, two backward and two forward, divided to their origin.—Tail, confishing of the we kelethers.

GEN. 11. CUCULUS.

Of the Cuckoo, which forms this class, there are five species for his in North-America, and nine in the South. Characters of this genus are, cit's, weak, a little bending.—North-bounded by a small rim.—ringue, short and pointed.—In two fee yard and two beckward.—Tail, cuneated, confishing of ten 1 of the class.

of will at the under fide of the body and coverts of the tail yellow; the body and coverts of the tail yellow; the body and coverts of the tail yellow; the body and coverts of the male and female in the male. This bird full ends its neft to the horizontal forks of the tulip and of the tries, formed of the filaments of fome tough plants, curiously work maked with work, and lined with hairs. It is of a pear shape, open to with a lost on the side through which the young discharge their excrement and it. In 1919 peris of North-America, this species, from its hylling tour, is called the Fiery Hangnest. It is named the Baltimore bird for conours, resembling those in the arms of the late Lord Baltimore, what the "true proprietors of Maryland."

GEN. 12. PICUS.

The charafters of this genus are—Bill, straight, strong, angular, and cuneated at the end.—Nostrils, covered with bristles, and reflected down.—Tongue, very long, stender, cylindric, tony, hard, jugged at the end, missie.—Toes, two forward and two backward.—Tail, consisting of ten hard, stiff, sharp-possed feathers. This genus is formed of the Woodpeckers, which may be divided into three general classes, green, black, and variegated or spotted; of the green Woodpecker, eleven species have been found in America; of the black, six; and of the variegated twenty-one; besides two species of a small bird called Woodpecker Creepers, the Les Pic Grimpertanx of bost. These latter might perhaps be with more propriety classed in the genus Yunx.

GEN. 13. ALCEDO.

Bill, long, strong, straight, and sharp-pointed.—Nostrils, small, and hid in the feathers.—Tongue, short, broad, therp-pointed.—Legs, short, three toes forward, one backward, three lawer joints of the middle toe joined closely to those of the commost. This genus includes the King Fishers, which M. outlon divides into three classes, the Great King Fisher, of which there are five species found in America; the Middle king Fisher, of which there are likewise five species; and the Less King Fisher of which we believe only one species has been found on the new continent.

GEN. 14. GALBULA.

Of the Jacamars, which constitute this genus, we believe there are only three species known, and all found in South-America; they have been considered by many as a species of the King Fisher, and therefore classed by Linnaus Akedo Galbula. The principal difference in character is in the legs being seathered before to the toes, and the toes being disposed, two bushward and two forward.

GEN. 15. SITTA.

The charafters of this genus are.—Bill, straight, on the lower standible a small angle.—Nostrils, small, covered with seathers restricted over them.—Tongue, short, horny at the edge, and jugged.—Toes, three forward, and one backward, the middle to small chiefly it the base to both the outmost.—Back toe as large at the middle one. The chief birds which form this genus are the Nuthatches, of which there are five species found in America, two of which are common in the United-States.

GER. 16. TODUS.

Bill, thin, depressed, broad, base beset with bristles.—Nostriles similaries.—Nostriles similaries, three sorward, one backward, connected like those of the King Fisher. This genus contains the Todies, of which there are eight or nine species known, all natives of the warm parts of America, or the West-India islands.

GEN. 17. MEROPS.

The bill of this genus is quadrangular, a little incurvated, there pointed.... No firels, finall, placed near the base.... Tongue, flender.... Toes, three forward and one backward, the three lower joints of the middle toe closely joined to those of the outmost. This genus contains the Bee Eater, of which sive or six species have been found in America.

GEN. 18. UPUPA.

The charafter of this genus is...Bill, arched, long, flender, convex, somewhat blunt and compressed...Nostrils, minute, situated at the base of the bill....Tongue, obtuse, entire, triangular, and short....Toes, three forward and one backward, middle too cledily united at the base to the outmost. This genus contains the Hoopoes and the Promerops, but there are only two species of the latter found in America, and these in the southern parts.

GFN. 19. CERTHIA.

Characters of this genus are... Bills, very slender, weak, and incurvated... Nessrils, imall.... Tongue, not so long as the bill, hard, and sharp at the point.... Toes, three forward and one backward, back too large.... Claus, long and hooked. This genus contains the birds commonly called Creepers, of which there are twenty species known on the American continent.

GEN. 20. TROCHILUS.

Bill, flender and weak; in some straight, in others in curvated.... No firels, minute.... Tongue, very long, formed of two conjoined cylindric tubes, missile.... Toes, three forward, one backward,... Tail consists of ten feathers.

This genus compichends the various Humming Birds, or £30 ney Suckers, which form a numerous class, not less than fixed fix species are found in the different parts of the new continent

ORDER III. GALLINACEOUS.

Heavy bodies, short wings, very convex; strong, archaece short bills; the upper mandible shutting over the edges of the

lower. The flesh delicate and of excellent nutriment; strong legs; toes joined at the base, as far as the first joint, by a strong membrane. Claws broad, formed for scratching up the ground. More than twelve feathers in the tail.

Granivorous, seminivorous, insectivorous, swift runners, of short slight; often polygamous, very prolific, lay their eggs on the bare ground. Sonorous, querelous, and pugnacious.

Or, with bills slightly convex; granivorous, seminivorous, insectivorous; long legs, naked above the knees: the genus that connects the land and the water-fowl. Agreeing with the cloven-footed water-fowl in the length and nakedness of the legs, and the sewness of its eggs: disagreeing in place, food, and form of bill, and number of feathers in the tail.

GEN. 1. PHASIANUS.

This genus includes the cock and the pheasants; the former are domesticated in all the settled parts of America; of the latter there are eight species known on the continent, all natives of South-America.

Characters of the pheasant are---Bill, convex, short and strong,----No first, small,--- Tail, bending downwards,

GEN. 2. MELAGRIS.

This genus contains the turkey, of which but one species is a native of North-America....Bill, convex, short and strong..... Nostile, open, pointed at one end, lodged in a membrane.... Tongue, sloped on both sides toward the end and pointed..... Head and Neck, covered with a naked tuberose slesh, with a long sleshy appendage hanging from the base of the upper mandible.... Tail, broad, consisting of eighteen feathers extensible.

GEN. 3. CRAX.

The curaffo forms this genus as well as the PENELOPE. The characters are---Bill, convex, strong and thick, the bale covered with a cere often mounted with a large nob.---N. strils small, lodged in the cere.---Head, sometimes adorned with a crest of feathers curling forwards.---Tail, large and straight. There are sour species of this genus, and three of the penclope sound in South-America. The most essential difference in the two genuses is, that the Bill in those of the penclope is naked at the base.

GEN. 4. TITRAO.

This genus includes three subdivisions: 4. The grows as ptarmigans.... Bill. convex, strong and short; a naked scarlet skill above each eye.... Nostrik. small and hid in the feathers.... Tengpointed.... Legs, seathered to the toes. Of these there are several species, found in the coldest parts of North-America.

- 2. The partridges and quails; these have no naked skin shows the eyes.—The Nostrils are covered with a callous promine at run; and the Legs naked, with the exception of two species. Of these there are eight species found in the temperate a mid warm parts of America.
- 3. The tinamous, which are peculiar to South-America, and of which five species are known. These birds resemble the pheasants in their habits....Bill, long and blunt at the tip—Nostrils, placed in the middle with a very wide gap....Throat, sprinkled with seathers....Tail, very short....Hind Tae, curtailed and uteless for running.

GEN. 5. PSOPHIA.

This genus includes two species of a bird called the trumpeter, one of which is found in Africa, and one in South-America; the latter is called the agmi or golden-breasted trumpeter, of which there is a beautiful specimen in the Leverian Museum. Character of this genus...Bill, short, upper mandible a little convex...-Nustrils, oblong, sunk and pervious...-Tongue, cartilaginous, that, torn or fringed at the end...-Legs, naked a little above the knees...-Toes, three before and one behind, with a round protuberance beneath the hind toe, which is at a small distance from the ground.

ORDER IV. COLUMBINE.

Bill, weak, flender, straight at the base, with a soft protuberant substance, in which the nostrils are lodged.—Tongue, entire.—Legs, short and red.—Toes, divided to the origin. Swift and distant slight, walking pace. Flaintive note, or coving, peculiar to the order. The male instates or swells up its breast in counting. Female lays but two eggs at a time. Male and semale sit alternately, and feed their young, ejecting the meat out of their stomachs into the mouths of the nestlings. Granivorous, seminivorous. The nest simple, in trees, or holes of rocks, or walls.

GEN. 1. COLUMBIA.

There is only one genus of this order; it is therefore needs to repeat the characters; it includes the pigeons and turtles, which there are known in different parts of America twells species,

ORDER V. PASSERINE.

Bodies, from the fine of a thrush to that of the golden-crested wren. The enliveners of the woods and fields; sprightly and buth in motion; their nests very artificial; monogamous, bactivorous, granivorous, seminivorous, insectivorous; their usual puce hopping, of a few running. Short slyers, except on their migrations only. All have three toes before, one behind.

GEŅ. 1. STURNUS.

Bill, straight, depressed.—Nostrils, guarded above by a promiment rim.—Tongue, hard and cloven.—Toes, middle toe joined to the outmost as far as the first joint. The stares constitute this genus, of which six species only are found in America.

GIN. 2. TURBUS.

Bill, straight, obtusely corinated at top, bending a little at the point, and slightly notched near the end of the upper mandible.—Nestrils, oval and naked.—Tongue, slightly jagged at the end. —Tongue, the middle toe joined to the outmost as far as the first joint.—Bath toe, very large. This genus includes the thrushes and blackbirds, of which there are twenty-eight species known in America. To this genus we must also assign a race of birds thiefly found in South-America, called ANTERS, on account of their feeding on that insect; they are designated American and nightingale anters; of the former there are eight species known, besides varieties, of the latter only two. Latham considers the whole as different species of the thrush, and Gmelin is evidently of the same opinion, by ranging them in this genus.

GEN. 3. AMPELIS.

The character of this genus is—Bill, straight, a little convex shows and bending towards the point; near the end of the upper mandible a small notch on each side.—Nostrils, hid in bristles.—Middle toe, closely connected at the bale to the outmost. This senus comprehends the chatterers or cotingas, of which there are ten species known in America.

GEN. 4. LOKIA.

The principal characters of this genus are—Bill, conically bunched at the base of the front rounded towards the head, under mandible inflected in its natural margin.—Nofirels, placed in the base of the bill, minute and rounded.—Tongue, entire,

The birds in America of this genus are the großeaks; croßebills, and bulfinches; of the two former there are about twenty species, and of the latter five, known upon the American continent.

GEN. 5. EMBERIZA.

The characters of this genus which includes the buntings are —Bill, strong and conic, the sides of each mandible bending inwards; in the roof of the upper a hard knob, of use to break and comminute hard seeds. There are sixteen species of this bird known in America.

GEN. 6. TANGARA.

The tangares which form this genus are almost all of them natives of America; there are only forty-fix species known, forty-three of which have been found on that continent. The characters are—Bill, conoid, a little inclining towards the point, upper mandible slightly ridged and notched at the end.

GEN. 7. FRINGILLA.

This extensive and multifarious genus includes the finches, canaries, siskins, linnets and sparrows, all of which, the canaries excepted, are found in America, to the amount of near fixty species: the distinguishing character of this genus is the Bill, perfectly conic, slender towards the end, and very sharp pointed.

GEN. 8. PHYTOTOMA.

There is only one species of this genus known, which is the tart of South-America. Its distinguishing characters are—Bill, conical, straight and serrated.—Nostrils, oval.—Tongue, short and blunt; it screams with a raucous interrupted voice, crops and tears up the tender plants, and makes most destructive visit surgardens.

GEN. 9. MUSCICAPA.

The characters of this genus are—Bill, flatted at the balmost triangular, notched at the end of the upper mandiand beset with bristles.—Tecs, divided as far as their orientations.—The sly-catchers constitute this genus, of which thirty-n species are known in America.

GEN. 10. ALAUDA.

Bill, short, slender, bending a little towards the end, should be pointed.—Nostrils, covered with feathers and bristles.—Tong cloven at the end.—Ives, divided to the origin.—Claw, of the back toe very long. This genus is formed of the larks, of which there are, we believe, only six species yet found in America.

OF AMERICAN BIRDS.

GEN. 11. MOTACILIA.

The characters of this genus are—Bill, awl shaped, straight, emandibles nearly equal.—Nostrils, nearly oval.—Tongue, jegd and notched. The birds found in America which are inuded in this genus are, the wagtail two species; the warblers d wrens eighteen species; the fauvette or petty chaps sive exies; the sig-eaters twenty-eight species; the pitpits sive exies; the red start, yellow neck worm-eater, middle bill, uiana red tail, &c. one or two species each.

GEN. 12. PIPRA.

This genus includes the manakins, of which there are known out twenty-fix species, most of them natives of the hot parts America. Characters—Bill, short, strong and hard, slightly curvated.—Nostrils, naked.—Toes, the middle closely united ith the outmost as far as the third joint.—Tail, short.

GEN. 13. PARTS.

Characters—Bill, straight, a little compressed, strong, hard, in sharp-pointed.—Nostrils, round and covered with britices sheeted over them.—Tongue, as if cut off at the end, and terminated by three or four bristles.—Toes, divided to their origin; in the very large and strong. This genus is formed of the mice, a remarkable prolific race, laying from eighteen to twendegs at an hatch. There appears to be about sixteen species town in America.

CEN. 14. HIRUNDO.

The characters of this genus are—Bill, short, broad at the bale, all at the point, and a little bending.—Nostrils, open.—Tergue, on, broad and cloven.—Legs, short.—Tail, forked.—Wings, ag. It includes the swallows, martins and swifts, of which treate eleven species known in America.

GEN. 15. CAPRIMULGUI.

Bill, short, hooked at the end, and flightly notched near the int,—Nostrils, tubular and a little prominent.—Mouth, vasily ide; on the edges of the upper part, between the bill and eyes, ven stiff brisslet.—Tongue, small, entire at the end.—Ligh, out, feathered before as low as the toes.—Toes, joined by a long membrane as far as the first joint.—Class of the middle e broad-edged and servated.—Tail confists of ten feathers, not tked. This genus includes the goat suckers, forming fifteen exies, fourteen of which, according to some, are natives is merica, according to others, are nine only.

ORDER VI. STRUTHIOUS.

Very great and heavy bodies. Wings imperfect; very fail, and useless for slight, but assistant in running. Flesh coarse and hard of digestion.

Struthious is a new coined word to express this order; for these birds could not be reduced to any of the Linnaun division. This order contains but two genera, the dodo and the official

of the first none have been found in America.

GIN. STRUTHIO.

The characters of this genus are.—Bill, small, sloping, and slittle depressed...-Wings, small, unfit for slight....Legs, long strong, and naked above the knees. It includes the offrich tribs, being four species, one only of which, the touyou, or grey casewary, is found in America; it is six feet high, and in its labits, &c. is in many respects similar to the offrich, to which, however, it is much inferior.

DIV. II. WATER-FOWL.

For the most part migratory, shifting from climate to climate from place to place, in order to lay their eggs, and bring their young in sull security; the thinly inhabited north is their principal breeding place; returning at stated periods, and, is general, yielding to mankind delicious and wholesome nutriment. All the cloven-sooted, or mere waders, lay their eggs on ground; those with pinnated sect form large nests, either the water or near it. From the sirst we must except the he

All the web-footed fowl either lay their eggs on the grou or on the shelves of losty cliffs; and none perch, except corvorant, shugg, and one or two species of ducks.

All the cloven-footed water fowl have long necks and lower, naked above the knees, for the convenience of wading water in fearch of their prey. Those that prey on fish ha frong bills; those that icased for minute infects, or worms the

4

k in mud, have slender weak bills, and olfactory nerves of stexquisite sense; for their food is out of sight.

is the name implies, their toes are divided, some to their gin; others have, between the middle and outmost toe, a ill membrane as far as the first joint. Others have both the erior toes connected to the middlemost in the same manner; I, in a few, those webs reach as far as the second joint; and have called Semipalmati.

If the web-footed fowl, the Flamingo, the Avofetta and mier, partake of the nature of both the cloven and web-ted orders; having webbed feet, long legs, naked above knees, and long necks. The other web-footed water-fowling very much on the element, have short legs, placed far and, and long necks; and, when on land (by reason of the ation of their legs) an aukward waddling gait.

The make of the cloven-footed water-fowl is light, both as kin and bones; that of the web-footed strong.

ORDER I. CLOVEN-FOOTED.

GEN. 1. PLATELEA.

The bird which constitutes this genus is the Spoonbill, of ich, according to Linnæus and Brisson, there are three spenis but M. Busson contends that there is only one, and that other two are varieties; whether varieties or different spenis two out of the three are found in South-America and the stronger.—The Bill is long, broad and thin, the end wideninto a form like the bowl of a spoon, rather round at the L-Nostrils, small, placed near the base.—Tongue, small and nted.—Feet, semipalmated.

GEN. 2. PALAMEDEA.

The characters of this genus are—Bill, bending down at the nt, with a horn or with a tuft of feathers erect near the base the bill.—Nostrils, oval.—Toes, divided almost to their origin h a very small membrane between the bottoms of each. bird which constitutes this genus is the screamer, of which re is only two species found in South-America. The horned amer has likewise on each wing two long spurs; the horn its head is three or four inches long, and two or three lines liameter at the base: of the spurs on the wings, which proforward, and are the apophyses of the metacarpal bone,

riting from the anterior part of these extremities, the upper is largest, of a triangular form, two inches long, and no lines broad at the base, somewhat curved, and terminating in point: the lower spur is only sour lines long, and of the sate breadth at its origin.

GEN. 3. MYCTERIA.

Of the Jabirou, which forms this genus, only one facile known; it is an inhabitant of South-America. Bill, long to large, both mandibles bending upwards, the upper triangular. Notice, small; according to Marcgrave, no tongue. In divided. The bird is as large as a twan, the neck shirting the bill in general measures about thirteen inches.

GEN. 4. CANCROMA.

Bill, broad, flat, with a keel along the middle, like a versed.—Noticels, small, lodged in a surrow.—Toes.

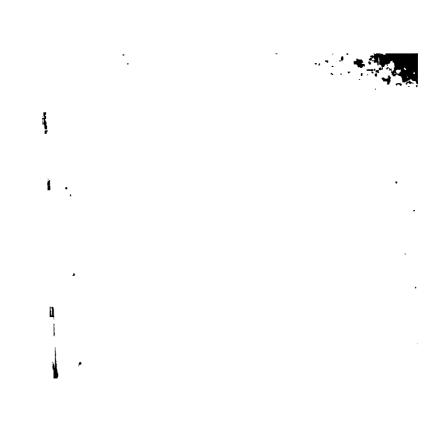

The bird forming this genus is the Boatbill, a bird appropriate by its manners the heron tribe. Linnaeus mentions two spaces but it appears there is only one and two varieties; it is a main of South-America.

GEN. 5. ARDEA.

The chirafters of this genus are—Bill, firight, first long, flattish, with a farrow extending from the nostrils the tip—Notes, linear,—Tongue, flarp,—Feet, four-ton This goe is contains, the herons, stocks, cranes and bitterns they are ranged in five subdivisions; the crowned, who his bild; the stocks, whose orbits are naked; the herons, who mid too is terrated inwards; and those which have the lift gaping in the middle. Of the stocks there are two specification in America, and two of the crane: a figure of out which, the Heaping Crane, we have given.* Of the herons

It is as tail as our largest cranes, but of a stronger and thicker table, but longer, its head bigger; its neck and legs not so stender; all the plantage white, except the great quilts of the wings, which are black, and the which is brown; the crown is callous and covered with black hairs, and and delicate, under which the reddish skin appears naked; a similar skin ester the checks; the tast of loose feathers in the tail is stat and pendant; the hair forrowed above, and indented at the edges near the tip; it is brown and inches long. Catesby has described this bird from an entire skin given him an Indian, who told him that these birds frequent, in great numbers, the low parts of the rivers near the sea in the beginning of spring, and return to the

thirty-feven species are known on that continent, and nine species of the bittern.

GEN. 6. TANTALUS.

The bird which forms this genus is the Ibis, of which two fpecies only are found on the new continent, and both in the fouthern part. Characters—Bill, long, thick at the base, wholly incurvated.—Eyes, lodged in the base.—Face, naked.—Nostrile, linear.—Tongue, short and broad.—Toes, connected at the base by a membrane.

GEN. 7. SCOLOPAX.

This genus contains a variety of species, known by the names of Cutlews, Whimbrels, Snipes, Woodcocks, Godwits, Red Shanks, Green Shanks and Yellow Shanks. They may all, however, be ranged under two names, Curlews and Snipes; of the former (the characters of which are---Bill, long, slender and incurvated.---Face, covered with feathers.---Nosiriis, longitudinal near the base.---Tongue, short and sharp pointed.---Toes, connected together as far as the first joint by a strong membrane) there are eight species in America; of the latter nineteen species. Characters---Bill, long, slender, straight and weak.---Nosirila, linear, lodged in a surrow.---Tongue, pointed and slender.----Toes, divided or very slightly connected; back toe very small.

mountains in summer. "This fact," says Catesby, " has been since confirmed by a white, who informed me, that these cranes are very noisy, and are seen in the Savannas at the mouth of the Altamaha, and other rivers near St. Augustice in Florida, and also in Carolina, but that they are never sound turner mouth."

Yet it is certain that they advance into the higher latitudes; for the same white cranes are found in Virginia, in Canada, and even in Hudfon's bay, 25 Edwards remarks .- The specific character of the hooping crane, Andes Americane, is, "Its top, its nape and its temples, are naked and papillous; its front, its nape, and its primary wing quills are black; its body is white; the extreme length is five feet feven inches." We extract the following pellage relating to these birds from Mr. Pennant's Arctic Zoology: "They make a remarkable hooping noise; this makes me imagine these to have been the birds, whole clamour Captain Phillip Amidas (the first Englishman who ever fet foot on North-America) lo graphically describes, on his landing on the ifle of Wokokou, off the coast of North-Carolina 'When,' says he, * such a flock of cranes (the most part white) arose under us with such a cry, redoubled by many echoes, as if an army of men had shouted together. This was in the month of July, which proves, that in those early days this species bred in the then desert parts of the southern provinces, till driven away by population, as was the case with the common crane in England, which abounded in our undrained fens till cultivation forced them entirely 20 quit our kingdom." Vol. ii. pag. 442.

GEN. 8. TRINGA.

The birds found in America in this genus are known by feweral popular names, as the Turnstone, Knot, Lapwing, Purres, Sandpipers, &c. They may almost all be classed under the name Sandpiper, amounting in the whole to about cleven species. Characters—Bill, straight, slender, about an inch and a half long.—Nostrils, small.—Tongue, slender.—Toes, divised generally the two outmost connected at bottom by a small membrane.

GEN. 9. CHARADRIUS.

GEN. 10. HE TOPUS.

A fingle species constitutes this -enus: it is called the Oylter Catcher; common to the old at I new continents.—Its Bill is long, compressed, and the end cuneated.—Nostrils, linear.—Tongue, scarce one-third of the length of the bill.—Toes, only three, the middle one joined to the exterior by a strong membrane; by the help of the bill raises limpets from the rocks, and opens cysters, on which it feeds.

CEN. 11. PARRA.

The Jacana's conflitute this genus, of which ten species are found in various parts of South-America, chiefly in Brasil.—The Boll is stander, sharp-pointed, base carunculated.—Nostrils, short, subovated, placed in the middle of the bill.—Wings, around on the front joint with a sharp short spur.—Toes, long, four on each feet, armed with very long and short sharp-pointed claves, from which circumstance it has by some been called the Suggran.

GEN. 12. RATLUS.

B.", flender, a little compressed and flightly incurvated.— Notices, finall.—Tengue, rough at the end.—Eady, much compressed.—Isid, very short. Of the rails, which form this genus, there are seven species found on the new continent.

GEN. 13. FULICA.

The Galticula or Water-hen forms his ginus, of which feven is are found in different parts of the new continent.—

I of this bird is thick at the base sloping to the point; ser mandible reaching far up the forehead, and not car-Body, compressed,—Wings, short and concave—Toss,

•

.

.

.

•

-long and divided to the origin,--- Tail, short, about the fize common pullet fix months old.

ORDER II. WITH PINNATED FEET.

This order contains only the Phalarope, the Coot, and the

The PHALAROFE. This bird is classed by Linnæus in the tringa genus; but Brisson forms a new genus, under the name Phalaropus, from the scallops on its toes. There are three species of it found in America. Characters.—Bill, straight and sender.—Nestrils, minute.—Body and Legs in every respect like the sandpiper.—Toes, furnished with scalloped membranes.

The Coot. This bird is found in America as well as in in Surope; it frequents ponds and lakes, and may be confidered in the beginning of the extensive tribe of true acquatic birds, it is almost constantly on the water.—Its Bill is short, strong, thick at the base, sloping to the end, the base of the upper mannelible rising far up the forehead, both mandibles of equal length.—Nostrils, inclining to oval, narrow and short.—Body compressed.—Wings, short.—Tail short.—Toes, long, surnished with broad scalloped membranes. The coot is classed by Linnæus in the fulica of the preceding order, but the scalloped membranes of its feet certainly removes it from that genus, however it may agree in other respects.

The GLEBE. The Bill of this bird is strong, stender and there-pointed.... Nostrils, linear.... Tongue, slightly cloven at the end..... Body, depressed..... Feathers, thick-set, compact, very strooth and glossy..... No tail.... Wings, short.... Legs, placed very far behind, very thin, or much compressed, doubly serrated behind.... Toes, furnished on each side with a broad plain membrane. Linnæus has classed these birds with the web-sooted, by the name of Colymbri; but Brisson has separated them, and from the make of their feet, they could not with propriety be classed with them. The Glebes are divided into two classes, the greater and the chesnut or castageneux, of each of which there are three species on the new continent.

ORDER III. WEB-FOOTED.

CEN. 1. RECURVIROSTRA.

This genus contains the Avosets, of which there are but vo species, one of which is found in America. The legs of the avoset, like the flamingo, contrary to most of the web-footened birds, are very long; it has likewise another singular character, viz. the inversion of its bill, which is best into the

are of a circle; the substance of the bill is soft and almost membranous at its tip.—Head, neet, and upper part of the body, of a pale buff colour; the rest of the lower part of the body, white,—Back and primaries black; lesser coverts white, greeter black; beneath which is a long transverse bar of white,—Legs, dusky colour.—Feet, semipalmated, the webs bordering on the sides of the toes for a considerable way. It is a native of North-America, and Mr. Pennant imagines they are sometimes found entirely white.

gen. \$. PHOEVICOPTERUS.

This genus includes but one species, the Flammant of F

GEN. 3. DIOMEDA.

Characters—Bill, strong, bending in the middle, and hooked at the end of the upper mandible; that of the lower mandible abrupt, and the lower part inclining downwards.—Nefrile, opening forward, and covered with a large convex guard.—Ne back toe. The birds in this genus are the Albatrosses. These birds, which in the bulk of their bodies are superior to all the known species of water-sowl, inhabit the shores, islands and sees within the tropics, along the coast of Chili, and the extremities of America, but it never has been seen in the seas of the northern hemisphere.

GEN. 4. ALCA.

The Auks form this genus, of which there are four species found about the new continent. Characters—Bill, thick, strong, convex, and compressed.—Nostrils, linear, placed near the edge of the mandible.—Tongue, almost as long as the bill.—No back toe.—Black on the back and white beneath.

GEN. 5. COLYMBUS.

The web-footed birds in this genus, that can be confidered as belonging to America, are only one species of the Guillemot and two of the Diver. The characters of the former are—Bill, shender, strong and pointed, upper mandible slightly bending towards the end; base covered with short soft feathers.—Neficie, lodged in a hollow near the base.—Tongue, slender, almost the length of the bill.—No back toe.—Colour, in general, black on the back, and white on the breast. Its weight is about twenty ounces.

The bill of the diver is strong and pointed, upper mandible the longest, edges of each bending inwards.—Nostrils, linear, upper part divided by a small cutaneous appendage.—Tongue, long and pointed, serrated at each side near the base.—Legs, very thin and slat.—Toes, the exterior the longest, back toe small, joined to the interior by a small membrane.—Tail, short. This bird is about the size of a goose.

GEN. 6. RYNCHOPS.

This genus contains only a fingle species and a variety, both natives of North-America: it is sometimes called the Skimmer, from the manner in which it collects its food on the water with the lower mandible; by others it is called the Shearbill and Cutwater.—The bill of this bird is greatly compressed, lower mandible much larger than the upper.—Nostrils, linear and pervious.—A small back toe.—Tail, a little forked. In its habits and figure it resembles the gulls.

GEN. 7. STERNA.

This genus contains the Terns and the Nodies: of the former there are seven species, all of which are found about the seas of America; of the latter we know of but one common to the same situations; indeed it is nothing but a species of the tern rather smaller. Characters... Bill, short, slender and pointed.... Nostrils, linear.... Tongue, slender and sharp.... Wings, very long.... A small back toe.... Tail, forked.

GEN. 8. LARUS.

The characters of this genus, which comprehends the Gulls and Mews, names which only diffinguish this family into the greater and lesser gulls, are---Bill, strong, bending down at the point, on the under part of the lower mandible an angular prominency.---Nostrils, oblong and narrow, placed in the middle of the bill.---Tongue, a little cloven.---Body, light.----Win long.---Legs, small, naked above the knees.----Back toe, small

Brisson has eighteen species of this genus, and we are inclined to think them as common to the shores of America as Europe.

CEN. 9. PROCELLARIA.

GEN. 10. MERGUS.

The Merganfer is
found in the north of d north of America.—Is his
is flender, a little depreffec nifhed at the end with a crocked
nail; edges of each mandible very flarply ferrated.—Nofrils,
near the middle of the mandible small and subovated.—Tongus,
flender.—Fers, the exterior toe longer than the middle. The
largest binds of this species are between a duck and goose, the
smaller about the size of the duck. There are in the whole
about seven species known.

GEN. 11. ANAS.

This genus includes the whole of the duck tribe, under the name of Swan, Goole, Duck, Widgeon, Teal, &c. of which near leventy species are known in America; of the species of the swan only one, of the goole ten, the rest ducks, &c. The distinguishing characters of this genus are—Bill, strong, broad flat or depressed, and commonly furnished at the end with a rest, edges marked with sharp lamillae.—Nessents, small, oval.—

Togae, broad, edges near the bale tringed.—Feet, middle toe the largest.

Classic, PEUICANUS,

The book on this group which may be faid to belong to American a found in the leas, are the Polican, of which there are two quarts and four various belonging to that continent; the Brokes, the species, the Frigat of Min of War bird; and, according to the opinion of Posten, the Carnet. The characters of the policin are—E. I long and firstly, the end hooked or slepton. Now, with a cutting wanting, or fmall and placed in a factor where transporting two files of the bill.—

ce, naked.—Gullet, naked, and capable of great distension.---es, all four webbed.

GEN. 13. PHARTON.

This genus is formed of the tropic birds; a class of the winged be, whose favourite haunts are the sequestered islands of India d America. There are three species known.—The bill is mpressed slightly sloping down, point sharp, under mandible gular.—Nostrils, pervious.—Toes, all four webbed.—Tail, cunerm, two middle seathers tapering and extending to a vast agth beyond the others.

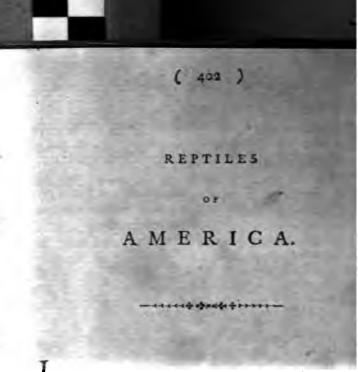

GEN. 14. PLOTUS.

Characters—Bill, long, straight, sharp-pointed.—Neck, of a eat length.—Face and gullet, covered with feathers.—Toes, all ur webbed. The darter or anhinga is the only bird in this nus. We believe there are three species, besides varieties, in e southern part of the new continent.

GEN. 15.

The penguin may be confidered as the link between birds and hes.—Its bill is strong and straight, bending only a little to-ards the point. Tongue, covered with strong, sharp spines, sinting backwards.—Wings, very small, pendulous, useless for ght, covered with mere slat shafts.—Body, covered with thick, ort feathers, with broad shafts placed as compactly as scales.—egs, short and thick, placed entirely behind.—Toes, sour standing sward, the interior loose, the rest webbed.—Tail, consisting only broad shafts. There are two species found on the coasts South-America.*

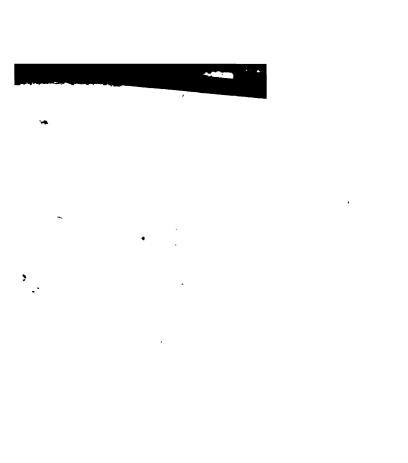

• We noticed at the beginning of this account of American birds, that in a division and orders we had followed Mr. Pennant—the fiveral genera are as alfed by Linnaus, except where otherwise mentioned.

IMPERFECT as the list of American quadrupeds and must be confessed to be, those of the reptiles must be a more so; sew have been the characters who, with leisure abilities, have possessed the inclination for these relear and those who have attempted any thing of this have contented themselves with very partial advances, or found such dissipations as have prevented any great progethey have, however, done sufficient, we trust, to stimulate to a farther pursuit, and we may reasonably hope that a sew will open to us a more particular acquaintance with the we the maribes, the mountains, and waters of the new continue to the selection of the new continuence, though perhaps the greater part are found all ove continent.

They force in the late wild hed parts of North-America no exterped in the population assessment for the morphism of the four infection of farther north than the morphism late in the four infect South-America, even as for the Lorenwoods and lofty hats, especially where the lurate are rooty or the morphism can incar Magaza abounds with them. Being daw of motion to me

Brisson has eighteen species of this genus, and we are inclined to think them as common to the shores of America as Europe.

GEN. 9. PROCELLARIA.

The Peterel, which forms this genus, inhabits all parts of exceen; it braves and sports with the most furious storms, and some of the species seem to enjoy those tremendous seems which sink the courage of the bravest men: they are found in great plenty in the seas near the cape of Good Hope and along the coasts of America, in the same parallels. The characters of this genus are---Bill, stra ght, except at the end, which is housed.---Nistrils, cylindric and tubular.---Legs, naked above the knees.---No back toe, but a sharp spur pointing downward instead.

GEN. 10. MERGUS.

The Merganser is the species that forms this genus; it as found in the north of Europe and north of America.—In ball is stender, a little depressed, furnished at the end with a crocked nail; edges of each mandible very sharply serrated.—Nostrels, near the middle of the mandible small and subovated.—Torques, slender.—Iest, the exterior toe longer than the middle. The largest birds of this species are between a duck and goose, the smaller about the size of the duck. There are in the whole about seven species known.

GEN. 11. ANAS.

This genus includes the whole of the duck tribe, under the name of Swan, Goofe, Duck, Widgeon, Teal, &c. of which near leventy species are known in America; of the species of the swan only one, of the goose ten, the rest ducks, &c. The distinguishing characters of this genus are—Bill, strong, broad, slat or depressed, and commonly surnished at the end with a noil, edges marked with sharp lamishe.—Nostrils, small, oval.—Tengue, broad, coges near the base fringed.—Feet, middle toe the larged.

GAN. 12. PELICANUS.

The books in this genus which may be faid to belong America, or found in its feas, are the Pelican, of which there is two peaks and four varieties belonging to that continent: the Brokhes, for peaks; the Fright of Min of War bird; and according to the opinion of Buffon, the Garnet. The characters of the peaker ere--Bill, long and firight, the end hooked or floring. Nine, either entirely wanting, or small and placed in a furrow which rous long the fides of the bill.

This is an immense animal; it often exceeds thirty-fix feet in length; the is very thick, of a dusky white colour, and its back is interspersed with ty-four large pale irregular spots; the tail is of a darker colour, and the are beautifully variegated with pale spots: besides, the whole body is intered with small brown spots. The head is covered with small scales, and has road laminæ betwixt the eyes, but has a black belt behind the eyes. It s the large dog-fangs, and of course its bite is not poisonous. The tongue hy and forked. Above the eyes, on each fide the head riftes high. The of this ferpent are all very small, roundish and smooth, The tail does not done-eighth of the whole length of the animal. The Indians, who adore sonftrous animal, use the skin for clothes, on account of its smoothness and y. There are several of these skins of the above dimensions preserved and : seen in the different museums of Europe, particularly in the library and ic garden of Upfal in Sweden, which has of late been greatly enriched by t Grillinborg. The slesh of this serpent is eat by the Indians and the es. Pilo, Margraave and Kempfer, give the following account of its meof living and catching its prey. It frequents caves and thick forests, where ceals itself, and suddenly darts out upon strangers, wild beasts &c. When oles a tree for its watching-place, it supports itself by twisting its tail round ank or a branch, and darts down upon sheep, goats, tigers, or any animal omes within its reach. When it lays hold of animals, especially any of 'ger kinds, it twifts itfelf feveral times round their body, and by the vaft of its circular muscles bruises and breaks all their bones; after the bones oke, it licks the skin of the animal all over, befmearing it with a glutinous of faliva. This operation is intended to facilitate deglutition, and is a preon for swallowing the whole animal. If it be a stag, or any horned animal, ns to swallow the feet first, and gradually sucks in the body, and last of head; when the horns happen to be large, this serpent has been observed shout for a long time with the horns of a stag sticking out from its mouth : animal digests, the horns putrefy and fall off. After this serpent has wed a flag or a tiger, it is unable for some days to move; the hunters, who ell acquainted with this circumstance, always take this opportunity of ying it. When irritated it makes a loud histing noise. It is faid to over with leaves in fuch places as stags or other animals

GENERAL DESCRIPTION, &c.

TWO-HEADED SNAKE.

This has in general been confidered as a monffront profution; but Mr. Morfe fays, he is disposed to believe that it is distinct species; he observes that he has seen one, and receives accounts of three others, found in different parts of the United States; one of these was about eight inches long, and both heads as to every outward appearance, were equally perfect, and branching out from the neck at an acute angle.

TREATIES

BETWEEN

HIS MOST CHRISTIAN MAJESTY

AND THE

THIRTEEN UNITED STATES OF AMERICA.

TREATY OF AMITY AND COMMERCE.

LOUIS, by the Grace of God, King of France and Navarre, to all who shall see these presents, greeting:

HE Congress of the Thirteen United States of North-America having, by their Plenipotentiaries refiding at Paris, notified their defire to establish with us and our States a good understanding and perfect correspondence, and having for that purpose proposed to conclude with us a Treaty of Amity and Commerce: We having thought it our duty to give to the faid States a sensible proof of our affection, determining us. to accept of their proposals: for these causes, and other good considerations us thereunto moving, we, reposing entire considence in the abilities and experience, zeal and fidelity for our service, of our dear and beloved Conrad Alexander Gerard, soyal syndic of the city of Strasburg, and secretary of our council of state, have nominated, appointed, and commissioned, and by these presents, signed with our hand, do nominate, appoint and commission him our plenipotentiary, giving him power and special command for us and in our name, to agree upon, conclude and fign with the plenipotentiaries of the United States, equally furnished in due form with full powers, such Treaty, Convention, and Articles of Commerce and Navigation, as he shall think proper; willing

that he act with the same authority as we might or could aft. if we were personally present, and even as shough he had more special command than what is herein contained; promifing in good faith, and on the word of a king, to agree to confirm, and establish for ever, and to accomplish and execu cute punctually, all that our faid dear and belowed Conrad Alexander Gerard shall stipulate and sign, by virtue of the present power, without contravening it in any manner, or suffering it to be contravened for any cause, or under any pretext whatloever; and also to ratify the same in due form, and cause our ratification to be delivered and exchanged in the time that shall be agreed on. For such is our pleasure. In testimony whereof we have hereunto set our seal. Done at Verfailles this thirtieth day of January, in the year of our Lord one thousand seven hundred and seventy-eight, and the fourth year of our reign.

TREAT'S

The Most Christian King, and the Thirteen United States of North America, to wit, New-Hampshire, Massachusett'sbay, Rhode-Illand, Connecticut, New-York, New-Jersey, Pennfylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina and Goorgia, willing to fix in an equitable and permanent manner, the rules which ought to be followed relative to the correspondence and commerce which the two parties defire to establish between their respective countries, sistes and Subjects; his Most Christian Majesty and the faid United States have judged, that the faid end could not be better obtained than by taking for the basis of their agreement the moft perfect equality and reciprocity, and by carefully avoiding all those burthenioine preferences which are usually sources of debate, embarratiment and discontent; by leaving also each party at liberty to make respecting navigation and commerce, those interior regulations which it shall find most convenient to itself, and by founding the advantage of commerce folely upon reciprocal utility, and the just rules of free intercourse; referving withal to each party the liberty of admitting, at its pleafure, other nations to a participation of the fame advantages. It is in the spirit of this intention, and to fulfil these views, that his d Majesty, having named and appointed for his plenipotenity Conrad Alexander Gerard, royal syndic of the city of rayburg, secretary of his majesty's council of state; and ie United States, on their part, having fully empowered Benmin Franklin, deputy from the State of Pennsylvania to the eneral Congress, and president to the convention of the State; ilas Deane, late deputy from the State of Connecticut to the id Congress; and Arthur Lee, consellor at law; the said resective plenipotentiaries, after exchanging their powers, and ster mature deliberation, have concluded and agreed upon the allowing articles:

Article I. There shall be a firm, inviolable and universal seace, and a true and sincere friendship, between the Most Christian King, his heirs and successors, and the United States of America, and the subjects of the Most Christian King and of the said States, and between the countries, islands, cities and owns, situate under the jurisdiction of the Most Christian King and of the said United States, and the people and inhabitants of every degree, without exception of persons or places, and the erms herein after mentioned, shall be perpetual between the Most Christian King, his heirs and successors, and the said United States.

Art. II. The Most Christian King and the United States ingage mutually not to grant any particular favour to other lations, in respect of commerce and navigation, which shall not immediately become common to the other party, who shall mjoy the same favour freely, if the concession was freely made, or allowing the same compensation, if the concession was conditional.

Art. III. The subjects of the Most Christian King shall pay in the ports, havens, roads, countries, islands, cities or towns of the United States, or any of them, no other or greater states or imposts, of what nature soever they may be, or by what name soever called, than those which the nations most savoured are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, whether in passing from one port in the said States to another, or in going to and from the same, from and to any part of the world, which the said nations so or shall enjoy.

Art. IV. The subjects, people and inhabitants of the feed paited States, and each of them, shall not pay in the ports.

havens, roads, itizeds, cities and places under the designation of his Most Christian Majesty in Europe, any other in grants duties or imposts, of what nature soever they may be, as by what name soever called, than those which the most favoured nations are or shall be obliged to pay; and they shall enjoy at the rights, liberties, privileges, immunities and examptions in trade, navigation and commerce, whether in passing from one port in the said dominions in Europe to another, or in going to and from the same, from and to any part of the world, which the said nations do or shall enjoy.

Art. V. in the above exemption is particularly comprised the imposition of one hundred sous per ton, established in France on foreign ships, unless when the ships of the United States shall load with the merchandise of France for another port of the said dominions; in which case the ships shall pay the daty above mentioned, so long as other nations the most savoured shall be obliged to pay it; but it is understood, that the said United States, or any of them, are at liberty, when they shall judge it proper, to establish a duty equivalent in the same cuit.

Art. VI. The Most Christian King shall endeavour, by all the means in his power, to protect and defend all vessels and the effects belonging to the subjects, people or inhabitants, of the fild United States, or any of them, being in his ports, havens or roads, or on the feas near his countries, islands, cities or towns; and to recover and restore to the right owners, their agents or attornies, all such vessels and effects which shall be taken within his jurifdiction; and the ships of war of his Most Christian Majesty, or any convoy failing under his authotity, shall, upon all occasions, take under their protestionall veliels belonging to the subjects, people or inhabitants, of the faid United States, or any of them, and holding the fame course, or going the same way, and shall defend such vessels as long as they hold the fame course, or go the same way, against all attacks, force or violence, in the tame manner as they ought to protect and defend the veffels belonging to the July its of the Most Christian King.

Art. VII. In like manner the faid United States, and their flips of war failing under their authority, finall protect and defend, conformably to the tenor of the preceding article, all the verifiels and effects belonging to the subjects of the Most Christian King, and use all their endeavours to recover, and cause to be reflered, the said verifield and effects that shall

ave been taken within the jurisdiction of the said United States, r any of them.

Art. VIII. The Most Christian King will employ his good staces and interpositions with the King or Emperor of Morocco & Fez; the regencies of Algiers, Tunis and Tripoly, or with ny of them; and also with every other prince, slate or lower, of the coast of Barbary in Africa, and the subjects of he said king, emperor, states and powers, and each of them, in order to provide as fully and efficaciously as possible for the beliefit, conveniency and safety of the said United States, and ach of them, their subjects, people and inhabitants, and their essentials and effects, against all violence, insults, attacks or deredations, on the part of the said princes and states of Barary, or their subjects.

Art. IX. The subjects, inhabitants, merchants, commanders f thips, masters and mariners of the states, provinces and dosinions of each party respectively, shall abstain and forbear to .th in all places possessed, or which shall be possessed by the ther party; the Most Christian King's subjects shall not fish in he havens, bays, creeks, roads, coasts or places, which the faid Inited States hold, or shall hereafter hold; and in like manner he subjects, people and inhabitants of the United States shall ot fish in the havens, bays, creeks, roads, coasts or places, shich the most Christian King possesses, or shall hereafter posess; and if any ship or vessel shall be found fishing contrary o the tenor of this treaty, the faid ship or vessel, with its ladog, (proof being made thereof) shall be confiscated: it is howwer understood, that the exclusion stipulated in the present rticle shall take place only so long, and so far, as the Most Ihristian King, or the United States, shall not in this respect ave granted an exemption to some other nation.

Art. X. The United States, their citizens and inhabitants, hall never diffurb the subjects of the Most Christian King in he enjoyment and exercise of the right of fishing on the banks f Newfoundland, nor in the indefinite and exclusive right which belongs to them on that part of the coast of that island which is designated by the treaty of Utrecht, nor in the right elative to all and each of the isless which belong to his Most shriftian Majesty, the whole conformable to the true sense of the treaties of Utrecht and Paris.

Art. XI. The subjects and inhibitants of the said United states, or any of them, shall not be reputed aublins in France, and consequently shall be exempted from the above disubsers, or

other fimilar de y, under what name foever: they may by teltament, donati n, or otherwise, dispose of their goods, me ble and immov, able, in favour of fuch persons as to then shill feem good; and their heirs, subjects of the United States, with ing whether in France or elfewhere, may fucceed them, at ittgtat, without being obliged to obtain letters of naturalization and without I ring the effect of this concession contested or inpeded, under pretext of any rights or prerogatives of provinces, cities or private persons; and the faid heirs, whether such by particular title, or ab intellat. Shall be exempted from the day ty of the same kind; fircalled droit de detre ing nevertheless th ities, as much and as long the United States, or sty as timilar ones are a Christian King shall enjoy, of them. The fub f the faid States, an entire

on their part, in al he flipulations contained in and perfect recipro fame time agreed, that its the present article : aws . ade, or that may be made contents shall not affer

hereafter in France, against emigrations, which shall remain in all their fiere and vigour; and the United States, on their part, or any of them, thall be at liberty to enact fuch laws, relative to that matter, as to them shall feem proper.

Att. All. The morellant thips of either of the parties, which fluid he making into a port belonging to the enemy of the other ally, and concerning whole voyage and the species of goods on have a here thall be just grounds of suspicion, shall be obthend to exhibit, as well upon the high feas as in the ports and havens, not only her paliports, but likewife certificates, expreselv for wing that her goods are not of the number of thole pichibited as contraband. Wildely Lave per

Art. Mill. It. 13 exhibiting of the above faid certificites, the other party discover there are any of those forts of goods which are prohibited and declared contraband, and configued for a port under the obedier ce of his enemy, it thall not be law-Jul to brook up the harders of each flap, or to open any chell, coffers, packs, caks, or any other veiller found therein, or to remove the smallest purcel of her goods, whether such thip belongs to the subjects of Timner, or the inhabitants of the faid United States, unless the liding be brought on shore, in the prefence of the officers of the court of admiralty, and an inventury terricularized at the there find be no allowance to fell, exchange, or chemate the lame in any it oner, until that after due and lawful process finall have been had against such probi-

ed goods, and the court of admiralty shall, by a sentence prounced, have confilcated the fame, faving always as well the p itself, as any other goods found therein, which by this aty are to be esteemed free; neither may they be detained on etence of their being as it were infected by the prohibited ods, much less shall they be consiscated as lawful prize. But not the whole cargo, but only part thereof shall consist of ohibited or contraband goods, and the commander of the ship all be ready and willing to deliver them to the captor who s discovered them; in such case, the captor having received ofe goods, shall forthwith discharge the ship, and not hinder or by any means, freely to profecute the voyage on which she as bound. But in case the contraband merchandises cannot sall received on board the vessel of the captor, then the capor may, notwithstanding the offer of delivering him the contraand goods, carry the vessel into the nearest port, agreeable to that is above directed.

Art. XIV. On the contrary, it is agreed, that whatever hall be found to be laden by the subjects and inhabitants of eiher party, or any ship belonging to the enemies of the other. it to their subjects, the whole, although it be not of the fort if prohibited goods, may be confiscated in the same manner as f it belonged to the enemy, except fuch goods and merchandife * were put on board such ship before the declaration of war, reven after fuch declaration, if so be it were done without inowledge of such declaration; so that the goods of the subeds and people of either party, whether they be of the nature I fuch as are prohibited or otherwise, which, as is aforesaid, rere put on board any ship belonging to an enemy before the 'ar, or after the declaration of the same, without the knowidge of it, shall no ways be liable to confiscation, but shall 'ell and truly be reflored without delay to the proprietors aeanding the same; but so as that if the said merchandises he Intraband, it shall not be any ways lawful to carry them after-"ards to any port belonging to the enemy. The two contractg parties agree, that the term of two months being passed after re declaration of war, their respective subjects, from whitever irt of the world they come, shall not plead the ignorance entioned in this article.

Art. XV. And that more effectual care may be taken for the curity of the subjects and inhabitants of both parties, that sy suffer no injury by the men of war or privateers of the her party, all the commanders of the ships of his Most Christan Majesty and of the faid United States, and all their subjects.

and inhabitants, shall be forbid doing any injury or damage to the other side; and if they ask to the contrary they shall be punished, and shall moreover be bound to make satisfaction for all matter of damage, and the interest thereof, by reparation, under the pain and obligation of their persons and goods.

Art. XVI. All ships and merchandise, of what nature soever, which shall be rescued out of the hands of any pirates or robbers on the high seas, shall be brought into some port of either state, and shall be delivered to the custody of the officers of that port, in order to be restored entire to the true proprietor, as soon as due and sufficient proof shall be made concerning the property thereof.

Art, XVII. It shall be lawful for the ships of war of either party, and privateers, freely to carry whitherfoever they plafe the finps and goods taken from their enemics, without being obliged to pay any duty to the officers of the admiralty, or my ether judges; nor shall such prizes be arrested or seized when they come and enter the port of each party; nor shall the franchers or other officers of those places fearth the fame, or make eminiation concerning the lawfulness of such prizes; but they may haift fail at any time, and depart, and carry their prizes to the places expressed in their commissions, which the communders of fuch flups of war shall be obliged to shew. On the contrary, no faction or refuge shall be given in their ports to tach as shall have made prizes of the subjects, people, or property of either of the parties; but if fuch shall come in, being 5 reed by fliefs of weather, or the danger of the fea, all proper means flaction vigorously med, that they go out and retire from the coas foon as possible.

At. XVIII. If any flip belonging to either of the paries, the propole, or table as, shall, within the coasts or dominions of the other, slick upon the fands, or be wrecked or suffer any order dament, all friendly assistance and relief shall be given to the periods supprocked, or such as shall be in danger thereof. And hitter or infe condate shall be wife be given to them for their free and quiet passage from thence, and the return of event one to have we country.

Mot. XIV. In case the fubjects and inhabitants of either cases, with their finipping, whether public and of war, or printed and of a cremants, be forced through firely of weather pointed of places or enemies, or any other urgent necessary, for the lang of fibeliar and hariour, to retreat and enter into any of the errors, buyly reads, or pairs belonging to the other party.

hall be received and treated with all humanity and kindind enjoy all friendly protection and help; and they shall imitted to refresh and provide themselves at reasonable with victuals and all things needful for the sustenance of persons, or reparation of their ships, and conveniency of voyage, and they shall no ways be detained or hindered returning out of the said ports or roads, but may remove part when and whither they please, without any let or ince.

- . XX. For the better promoting of commerce on both it is agreed, that if a war should break out between the vo nations, six months after the proclamation of war shall wed to the merchants in the cities and towns where they for selling and transporting their goods and merchandises; any thing be taken from them, or any injury be done them a that term, by either party, or the people or subjects of, full satisfaction shall be made for the same.
- . XXI. No subject of the Most Christian King shall apply r take any commission or letters of marque for arming nip or ships to act as privateers against the said United , or any of them, or against the subjects, people, or inhas of the said United States or any of them, or against roperty of any of the inhabitants of any of them, from rince or state with which the United States shall be at nor shall any citizen, subject, or inhabitant of the said d States, or any of them, apply for or take any commission ters of marque for arming any ship or ships to act as eers against the subjects of the Most Christian King, or If them, or the property of any of the inhabitants of any m, from any prince or state with which the United States be at war; nor shall any citizen, subject or inhabitant : said United States, or any of them, apply for or take commission or letters of marque for arming any ship or to act as privateers against the subjects of the Most Chris-King, or any of them, or the property of any of them, any prince or state with which the said king shall be r; and if any person of either nation shall take such ission or letters of marque, he shall be punished as a
- * XXII. It shall not be lawful for any foreign privateers, elonging to the subjects of the Most Christian King, nor as of the said United States, who have commission from ther prince or state at cannity with either nation, to sit ships in the posts of either the one or the other of the

sforesish parties, to fell what they have taken, or in any other manner whatsever to exchange their ships, merchandises, or any other lading; neither shall they be allowed even to purchase wishing, except such as shall be necessary for their going to the next port of that prince or state from which they have commissions.

Art. XXIII, It shall be lawful for all and fingular the subjects of the Most Christian King, and the citizens, people, and inhabitants of the faid United States, to fail with their ships with all manner of liberty and fecurity, no distinction being made who are the promietors of the merchandife laden thereon, from any port to the places of those who now are or hereafter shall be at cominy with the Most Christian King or the United States. It final likewife be lawful for the subjects and inhabitants aforeaid to fell with the flips and merchandiles aforementioned, and to tride with the fame liberty and fecurity from the places, ports, and havens of those who are enemies of both or either par'v, without any opposition or disturbance whatsoever, not only directly from the places of the enemy aforementioned to mour of affices, but also from one place belonging to an enemy to soften place belonging to an enemy, whether they be under elle justification of the fame prince or under feveral. And it is hereby flintlevel, that free flips shall also have a freedom to cory goods, and that every thing shall be deemed free and exsupplied the little found on board the thips belonging to the scripelts of either of the confederates, although the whole lidby any part thereof should appearain to the enemies of eather, contraboud goods being always excepted. It is also agreed in Lac manner that the fame liberty be extended to perwho are in board a free thip, with this effect, that although they in enemies to both or either party, they are not to be a con out of that free thip, unless they are foldiers and in aftul tivice of the enemies.

Art. NAIV. This liberty of pavigation and commerce shall extend to all genes of merchandifes, except those only which are differentiable to the name of contraband; and under this name of contraband or prolabited goods shall be comprehended and, great ward, books with their suffects and other things belonging to turn, cannon ball, guippowder, match, pikes counds, linear, totals, halberds, mortars, potards, grenadoes, fairness, or first, mosket ball, bucklers, helmets, breast plates, wats of mole, and the like kinds of arms proper for arming a libert, mossive rels, helps, harles with their furniture, and all other wouldes influencess whitever. These merch.

thich follow thall not be reckoned among contraband or ited goods; that is to fay, all forts of clothes, and all manufactures woven of any wool, flax, filk, cotton, or ther materials whatever; all kinds of wearing apparel, er with the species whereof they are used to be made, and filver, as well coined as uncoined, tin, iron, copper, brafs, coals; as also wheat and bayley, and her kind of corn or pulle, tobacco, and likewife all manspices, falted and smoaked flesh, salted fish, cheese and beer, oils, wines, fugars, and all forts of falts, and in I all provisions which ferve for the nourithment of manand the fustenance of life: furthermore, all kinds of , hemp, flax, tar, pitch, ropes, cables, fails, fail-cloth, rs, and any parts of anchors, also ships masts, planks, and beams of what trees foever, and all other things r either for building or repairing ships, and all other goods ver which have not been worked into the form of any ment or thing prepared for war by land or fea, fhall not puted contraband, much lefs fuch as have been already ht up for any other use; all of which shall be wholly ned among free goods; as likewife all other merchanand things which are not comprehended and particularly oned in the foregoing enumeration of contraband goods, t they may be transported and carried in the freest manner e subjects of both confederates even to places belonging to emy, such towns or places being only excepted as are at me belieged, blocked up or invested.

els may be avoided and prevented on one fide and the it is agreed, that in case either of the parties hereto should agaged in war, the ships and vessels belonging to the its of people of the other ally must be furnished with etters or passports, expressing the name, property, and of the ship, as also the name and place of habitation of assert or commander of the said ship, that it may appear by that the ship really and truly belongs to the subjects of the parties, which passport shall be made out and ed according to the form annexed to this treaty; they are wishes the extension of a year; it is likewise agreed, such thips being laden are to be provided not only with outs as above mentioned, but also with cirtiscates, containts several particulars of the cargo, the place whence the

ship failed, and whither she is bound, that so it may be known whether any surbidden or contraband goods be on board of the same, which circificates shall be made out by the officers of the place whence the ship set fail, in the accustomed form; and if any one shall think it sit or adviceable to express in the said cert shales the person to whom the goods on board belong, he may freely do so.

Art. NAVI. The ships of the subjects and inhabitants of either of the parties coming upon any coast belonging to either of the field allies, but not willing to enter into port, or being entered toto port and not willing to unload their cargoes, or break bulk, they shall be treated according to the general rules prescribed or to be prescribed relative to the object in question.

Art. XXVII. If the ships of the said subjects, people or inhabitants of either of the parties shall be met with, either sailing along the coasts or on the high seas, by any ship of war of the other, or by any privateers, the said ships of war or privateers, for the avoiding of any disorder, shall remain out of cannon shot, and may fend their boats on beard the merchant ship which they shall to meet with, and may enter her to the number of two or three men only, to whom the master or commmander of such ships made out according to the form inserted in this parametric to a said the ship, when she shall have snewed such parametric to a said the ship, when she shall have snewed such parametric the said the sawful to molest or search in any manner, or to give her chace, or to force her to quit her intended come.

Art. NAVIII. It is also agreed, that all goods, when ence I can board the ships or vessels of either of the two controls interpreties, shall be subject to no further visitation, but all variet in or fearth shall be made beforehand, and all prohibited goods shall be shopped on the spot before the same be put on mail, unless there are manifest tokens or poors of fraudulent practice; nor shall either the pertons or goods of the subjects of less 11 st. Christian Majosty, or the United States, be put under any arrest, or molested by any other kind of embargo for that caute, and only the subjects of that State to whom the said gods have been or shall be prohibited, and who shall pretune to soil or absente such fort of goods, shall be duly pumified for the effects.

Art. XXIX. The two controlling parties grant mutually the liberty of having each in the ports of the other, confuls

wice-confuls, agents and commissaries, whose functions shall be regulated by a particular agreement.

Art. XXX. And the more to favour and facilitate the commerce which the subjects of the United States may have with France, the Most Christian King will grant them in Europe one or more free ports, where they may bring and dispose of all the produce and merchandise of the Thirteen United States; and his Majesty will also continue to the subjects of the said States, the free ports which have been and are open in the French islands of America, of all which free ports the said subjects of the United States shall enjoy the use, agreeable to the regulations which relate to them.

Art. XXXI. The present treaty shall be ratified on both sides, and the ratifications shall be exchanged in the space of six months, or sooner, if possible.

In faith whereof the respective plenipotentiaries have signed the above articles both in the French and English languages; declaring, nevertheless, that the present treaty was originally composed and concluded in the French language, and they have thereto affixed their seals.

Done at Paris, this fixth day of February, one thoufand feven hundred and feventy-eight.

LOUIS.

By the King, GRAVIER DE VERGENNES.

TREATY.

The Most Christian King and the United States of North-America, to wit, New-Hampshire, Massachusetts Bay, Rhode-Hand, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina, and Georgia, having this day concluded a treaty of amity and commerce, for the reciprocal advantage of their subjects and citisens, have thought it necessary to take into consideration the means of strengthening those engagements, and of rendering them useful to the safety and tranquillity of the two parties; perticularly in case Great-Britain, in resentment of that connection, and of the good correspondence which is the object of the faid treaty, should break the peace with France, either by direct hostilities, or by hindering her commerce and navigation in a manner contrary to the rights of nations, and the peace sublisting between the two crowns. And his Majesty and the said United States having relolved in that case to join their counsels and efforts against the enterprises of their common enemy;

The respective plenipotentiaries impowered to concert the clauses and conditions proper to fulfil the said intentions, have, after the most mature deliberation, concluded and determined on the following articles:

Article I. If war should break out between France and Great-Britain during the continuance of the present war between the

Chiled States and England, his Majesty and the faid United States Stall make it a common cause, and aid each other mutually with their good offices, their counsels and their forces, according to the originate of conjunctures, as becomes good and fainful allies.

Act. II. The effential and direct end of the prefent defeative alliance is, to maintain effectually the liberty, fovereignty and independence, absolute and unlimited, of the said United State, as well in matters of government as of commerce.

Art, III. The two contracting parties shall, each on its on part, and in the manner it may judge most proper, make all the efforts in its power against their common enemy, in order to stain the end proposed.

Art. IV. The contracting parties agree, that in case either of them should form any particular enterprise in which the concurrence of the other may be defired, the party whose concurrence is desired shall readily and with good faith join to att in content for that purpose, as far as circumstances and its own particular situation will permit; and in that case, they shall regulate, by a particular convention, the quantity and kind of succour to be furnished, and the time and manner of its being brought into action, as well as the advantages which are to be its compensation.

Art. V. If the United States should think fit to attempt the reduction of the British power remaining in the northern parts of America, or the islands of Bermudas, those countries or islands, in case of success, shall be confederated with, or dependent upon, the said United States.

Art. VI. The Most Christian King renounces for ever the possession of the islands of Bermudas, as well as of any part of the continent of North-America, which, before the treaty of Paris, in 1763, or in virtue of that treaty, were acknowledged to belong to the crown of Great-Britain, or to the United State, heretofore called British colonies, or which are at this time, or have lately been, under the power of the King and Crown of Great-Britain.

Ait. VII. If his Most Christian Majesty shall think properto attack any of the islands situated in the Gulph of Mexico, or near that Gulph, which are at present under the power of Great-Britain, all the said isles, in case of success, shall appearants the Crown of France.

Art. VIII. Neither of the two parties shall conclude cites struce or peace with Great-Britain, without the formal contest of

ther first obtained; and they mutually engage not to lay their arms, until the independence of the United States have been formally or tacitly assured, by the treaty or is that shall terminate the war.

t. IX. The contracting parties declare, that being resolved lfil each on its own part, the clauses and conditions of resent treaty of alliance, according to its own power and instances, there shall be no after-claim of compensation, are side or the other, whatever may be the event of the

t. X. The Most Christian King and the United States to invite or admit other powers, who may have received less from England, to make a common cause with them, to accede to the present alliance, under such conditions sall be freely agreed to, and settled between all the

t. XI. The two parties guarantee mutually, from the pretime and for ever, against all other powers, to wit, the ed States to his Most Christian Majesty, the present possesof the Crown of France in America, as well as those h it may acquire by the suture treaty of peace; and his Christian Majesty guarantees, on his part, to the United a, their liberty, sovereignty and independence, absolute and nited, as well in matters of government as commerce, and their possessions, and the additions or conquests that their aderation may obtain during the war, from any of the donas now or heretofore possessed by Great-Britain in Northrica, conformable to the fifth and fixth articles above ten; the whole, as their possession, shall be fixed and ed to the said States, at the moment of the cessation of their ant war with England.

ri, XII. In order to fix more precisely the sense and applia of the preceding article, the contrasting parties declare, in case of a rupture between France and England, the reical guarantee declared in the said article shall have its full and effect, the moment such war shall break out; and the rupture shall not take place, the mutual obligations is said guarantee shall not commence until the moment be cessation of the present war between the United States England shall have ascertained their possessions.

st. XIII. The present treaty shall be ratified on both sides, ratifications shall be exchanged in the space of six months, wher, if possible.

CONVENTION BETWEEN FRANCE AND AMERICA

By the Profident of the United States of America.

A PROCLAMATION.

HEREAS a convention, for defining and establishing the functions and privileges of the respective confuls and vice-confuls of his Most Christian Majesty and the said United coates, was concluded and signed by the plenipotentiaries of his faid Most Christian Majesty and of the said United States, daily and respectively authorised for that purpose, which convention is in the form following, viz.

COSVENTION,

transon his Most Christian Majesty and the United States of America, for the purpose of defining and establishing the functions and provileges of their respective consults and vice-consults.

His Majesty the Most Christian King and the United States of America having, by the twenty-ninth acticle of the treaty

f Amity and Commerce concluded between them, mutually ranted the liberty of having, in their respective States and orts, confuls, vice-confuls, agents and commissaries; and be-1g willing, in consequence thereof, to define and establish, in reciprocal and permanent manner, the functions and privileges f confuls and vice-confuls, which they have judged it conenient to establish of preference, his Most Christian Majesty as nominated the Sieur Count of Montmorin, of St. Herent, parechal of his camps and armies, knight of his orders and f the Golden Fleece, his counsellor in all his councils, minister ad secretary of state and of his commandments and finances, aving the department of foreign affairs; and the United States ave nominated the Sieur Thomas Jefferson, citizen of the Inited States of America, and their minister plenipotentiary near the king, who, after having communicated to each ther their respective full powers, have agreed on what folows:

Art. I. The confuls and vice-confuls, named by the Most Christian King and the United States, shall be bound to present heir commissions according to the forms which shall be established respectively by the Most Christian King within his dominions, and by the Congress within the United States. There hall be delivered to them, without any charges, the exequatur accessary for the exercise of their functions: and on exhibiting he said exequatur, the governors, commanders, heads of justice, bodies corporate, tribunals and other officers, having uthority in the ports and places of their consulates, shall cause hem to enjoy, immediately and without difficulty, the pre-emisences, authority and privileges, reciprocally granted, without macking from the said consuls and vice-consuls any fees under ny pretext whatever.

Art. II. The consuls and vice-consuls, and persons attached o their functions, that is to say, their chancellors and secretaries, hall enjoy a sull and entire immunity for their chancery and he papers which shall be therein contained. They shall be exmpt from all personal service, from soldier's billets, militia, ratch, guard, guardianship, trussesship, as well as from all luties, taxes, impositions, and charges whatsover, except on he estate real and personal of which they may be the propritors or possessors, which shall be subject to the taxes imposted in the estates of all other individuals: and in all other instances, they shall be subject to the laws of the land, as the natives real. Those of the said consuls and vice-consuls, who shall exercise commerce, shall be respectively subject to all taxes,

charges and impositions, established on other merchants. They shall place over the outward door of their house, the arms of their sovereign; but this mark of indication shall not give to the faid house any privilege of asylum for any person or property whatsoever.

Art. III. The respective consuls and vice-consuls may establish agents in the different ports and places of their departments, where necessity shall require. These agents may be chosen among the merchants, either national or foreign, and summissed with a commission from one of the said consuls. They shall confine theirselves respectively to the rendering to their respective merchants, navigators and vessels, all possible service, and to inform the nearest consul of the wants of the said merchants, navigators and vessels—without the said agents otherwise participating in the immunities, rights and privileges, attributed to consuls and vice-consuls—and without power, under any pretext whatever, to exact from the said merchants any duty or emolument whatsever.

Art. IV. The contuls and vice-contuls respectively may establish a chancery, where shall be deposited the consular determinations, acts and proceedings, as also testaments, obligations, contracts and other acts, done by or between persons of their nation, and effects left by deceased persons, or faved from ship-wreck. They may, consequently, appoint fit persons to act in the said chancery; receive and swear them in; commit to them the custody of the seal, and authority to seal commissions, sentences and other consular acts; and also to discharge the sunctions of notary and register of the consulate.

Art. V. The confuls and vice-confuls respectively shall have the exclusive right of receiving in their chancery, or on board of vessels, the declarations and all other acts, which the captains, masters, crews, passengers and merchants of their nation may choose to make there, even their testaments and other disposals by last will; and the copies of the said acts, duly authenticated by the said confuls or vice-confuls, under the seal of the consulate, shall receive saith in law, equally as their originals would, in all the tribunals of the dominions of the Most Christian King and of the United States. They shall also have, and exclusively, in case of the absence of the testimentary executor, administrator, or legal heir, the right to inventory, liquidate and proceed to the sale of the personal estate left by subjects or entirens of their nation, who shall die within the extent of their consulates they shall proceed thither with

the assistance of two merchants of their nation, or, for want of them, of any other at their choice; and shall cause to be deposited in their chancery the effects and papers of the faid estates: and no officer, military, judiciary, or of the police of the country, shall disturb them or interfere therein, in any manner whatfoever: but the faid confuls and vice-confuls shall not deliver up the faid effects, nor the proceeds thereof, to the lawful heirs, or to their order, till they shall have caused to be paid all debts which the decealed shall have contracted in the country: for which purpole the creditors shall have a right to attach the faid effects in their hands, as they might in those of any other individual whatever, and proceed to obtain fale of them till payment of what shall be lawfully due to them. When the debts shall not have been contracted by judgment, deed or note, the fignature whereof shall be known, payment shall not be ordered but on the creditor's giving sufficient surety, resident in the country, to refund the sums he shall have unduly received, principal, interest and costs: which furety, nevertheless, shall stand duly discharged after the term of one fear in time of peace, and of two in time of war, if the demand in discharge cannot be formed before the end of this term, against the heirs who shall pretent themselves. And in order that the heirs may not unjustly be kept out of the effects of the deceased, the consuls and vice-consuls shall notify his death in fome of the gazettes published within their consulate; and that they shall retain the said effects in their hands seven months, to answer all demands which shall be presented; and they shall be bound, after this delay, to deliver to the persons succeeding thereto, what shall be more than sufficient for the demands which shall have been formed.

Art. VI. The confuls and vice-confuls respectively shall receive the declarations, protests and reports, of all captains and masters of their respective nations, on account of average losses sustained at sea; and these captains and masters shall lodge in the chancery of the shid confuls and vice-confuls, the acts which they may have made in other ports on account of the accidents which may have happened to them on their voyage. If a subject of the Most Christian King, and a citizen of the United States, or a foreigner, are interested in the said cargo, the average shall be settled by the tribunals of the country, and not by the confuls or vice-confuls; but when only the subjects or citizens of their own nation shall be interested, the respective confuls or vice-confuls shall appoint skilful persons to tettle the damages and average.

Art. VII. In cases where by tempest, or other scrident, French ships or vessels shall be stranded on the coasts of the United States; and ships or vessels of the United States shall be stranded on the coasts of the dominions of the Most Christian King; the conful or vice-conful, nearest to the place of shipwreck, shall do whatever he may judge proper, as well for the purpole of faving the faid ship or vessel, its cargo and appurtenances, as for the storing and security of the effects and merchandise saved. He may take an inventory of them, without the intermeddling of any officers of the military, of the cuftoms, of justice, or of the police of the country, otherwise than to give to the confuls, vice-confuls, captain and crew of the vessel, shipwrecked or stranded, all the succour and favour which they shall ask of them, either for the expedition and security of the faving and of the cliefts faved, as to prevental disturbance. And in order to prevent all kinds of dispute and discussion, in the said cases of ship wreck, it is agreed, that when there shall be no conful or vice-conful to attend to the faving of the wreck, or that the relidence of the faid couful or vice-conful the not being at the place of the wreck) shall be more diftant from the taid place, than that of the competent judge of the country, the latter shall immediately proceed therein with all the dispatch, certainty and precautions, preferibed by the respective laws; but the laid territorial judge shall retire, on the arrival of the conful or vice-conful, and shall deliver over to him the report of his proceedings, the expenses of which the conful or vice-centul thall cause to be reimburted to him, as well as those of saving the wreck. The merchandise and effects lavel shall be deposited in the nearest custom-house, or other place of fafety, with the inventory thereof, which shall have been made by the centul or vice-contuls, or by the judge who shall have proceeded in their abtence, that the faid effects and merchandue may be alterwards delivered, latter levying therefrom the coils; and without form of process to the owners, who, being furnished with an order for their delivery from the nearest conful or vice-co sul, fault re-claim them by themselves, or by their order, eather for the purpose of resexpering such merchandile, in which care they finall pay no kind of duties of experiment or for that of felling them in the charter, it they be not prohibited there; and in this left circ, the red merchandit, if they be damaged, in the who we have disterned to entrance duties, proportioned to the change of a layer furtiened, which

shall be ascertained by the affidavits taken at the time the vessel was wrecked or struck.

Art. VIII. The confuls or vice-confuls shall exercise police over all the vessels of their respective nations; and shall have on board the said vessels, all power and jurisdiction in civil matters: in all the disputes which may there arise, they shall have an entire inspection over the said vessels, their crews, and the changes and substitutions there to be made: for which purpose they may go on board the said vessels whenever they may judge it necessary. It being well understood, that the sunctions hereby allowed shall be confined to the interior of the vessels, and that they shall not take place in any case which shall have any interference with the police of the ports where the said vessels shall be.

Art. IX. The confuls and vice-confuls may cause to be arrested the captains, officers, mariners, failors, and all other persons, being part of the crews of the vessels of their respective nations, who shall have deferted from the said vessels, in order to fend them back and transport them out of the country. For which purpose, the said consuls and vice-consuls shall address themselves to the courts, judges, and officers competent; and shall demand the said deserters in writing, proving by an exhibition of the registers of the vessel or ship's roll, that those men were part of the faid crews: and on this demand so proved, (faving, however, where the contrary is proved) the delivery shall not be refused: and there shall be given all aid and assistance to the faid confuls and vice-confuls for the learch, leizure and arrest of the said deserters, who shall even be detained and kept in the prisons of the country, at their request and expense, until they shall have found an opportunity of sending them back. But if they be not fent back within three months, to be counted from the day of their arrest, they shall be set at liberty, and shall be no more arrested for the same cause.

Art. X. In cases where the respective subjects or citizens shall have committed any crime, or breach of the peace, they shall be amenable to the judges of the country.

Art. XI. When the fald offenders shall be a part of the crew of a vessel of their nation, and shall have withdrawn themselves on board the said vessel, they may be there seized and arrested by order of the judges of the country: these shall give notice thereof to the consul or vice-consul, who may repair on board, if he thinks proper: but this notification shall not

in any cife, delay execution or the order in question. The performs arrested shall not alterwards be fet at liberty, until the control or vice-conful shall have been notified thereof; and they shall be delivered to him, if he requires it, to be put again on board of the veifel in which they were arrested, or of others of their nation, and to be tent out of the country.

Art. XII. All differences and fults between the fubjetts of the Most Christian King in the United States, or between the cirizens of the United States within the dominions of the Molt Christian King, and particularly all disputes relative to the wages and terms of engagement of the crews of the respective veifels, and all differences of whatever nature they may be, which miv arile between the privates of the faid crews, or betwo many of them and their captains, or between the captains of different vellels of their nation, shall be determined by the respective contails and vice-consuls, either by a reference to arbitrators, or by a funimary judgment, and without cofts. No officer of the country, civil or military, shall interfere therein, or take any part whatever in the matter; and the appeals from the tald centular fentences shall be carried before the tribunals of France, or of the United States, to whom it may appertin to take cognizance thereof.

Art. XIII. The general utility of commerce having caused to be citablished, within the dominions of the most Christian King, particular tribunals and forms for expediting the decision of commercial affairs, the merchants of the United States shall enjoy the benefit of these establishments; and the Congress of the United States will provide, in the manner most conformable to its laws, for the establishment of equivalent advantages in favour of the French merchants, for the prompt dispatch and decision of estairs of the same nature.

XIV. The tubjects of the Most Christian King, and citizens of the United States, who shall prove by legal evidence, that they are of the roid nations respectively, shall, in consequence, enjoy an exemption from all personal service in the place of their settlement.

AV. If any other nation acquires, by virtue of any convention whatever, treatment more favourable with respect to the consular pre-eminences, powers, authority and privileges, the consuls and vice-consuls of the Most Christian King, or of the United States, reciprocally shall participate therein, agreeably

the terms stipulated by the second, third and sourth articles the treaty of Amity and Commerce concluded between the st Christian King and the United States.

Art. XVI. The present convention shall be in full force durthe term of twelve years, to be counted from the day of the change of ratifications, which shall be given in proper form, exchanged on both sides within the space of one year, or ner if possible. In faith whereof, we, ministers plenipoteny, have signed the present convention, and have thereto set seal of our arms.

Done at Verfailles the fourteenth of November, one thousand seven hundred and eighty-eight.

Signed L. C. Dr MONTMORIN, (L. S.)
THOMAS JEFFERSON. (L. S.)

PROCLAMATION.

and whereas the faid convention has been duly ratified and firmed by me on the one part, with the advice and confent the fenate, and by his Most Christian Majesty on the other, the said ratifications were duly exchanged at Paris on the day of January in the present year. Now, therefore, to end that the said convention may be observed and performed h good saith on the part of the United States, I have ordered premises to be made public, and I do hereby enjoin and rere all persons bearing office, civil or military, within the ited States, and all others citizens or inhabitants thereof, or any within the same, faithfully to observe and fulfil the said vention, and every clause and article thereof.

In testimony whereof I have caused the seal of the United States to be affixed to these presents, and signed the same with my hand. Given at the city of New-York, the ninth day of April, in the year of our Lord one thousand seven hundred and ninety, and of the sovereignty and in sependence of the United States the sourceenth.

GEORGE WASHINGTON.

By the Prefident,

THOMAS JEFFERSOM.

THE

DEFINITIVE TREATY

BETWEEN

GREAT-BRITAIN AND THE L ED STATES OF AMERICA.

Signed at

mber 3, 1783.

In the na

nost holy and undivided Trinity.

T having pleafen vidence to dispose the heart of the most serene and most potent prince George the Third, by the grace of God, King of Great-Britain, France and Ireland, desender of the faith, Duke of Brunswick and Lunenbuigh, arch-treasurer and prince elector of the holy Roman empire, &c. and of the United States of America, to forget all past milunderstandings and differences, that have unhappily interrupted the good correspondence and friendship which they mutually wish to restore; and to establish such a beneficial and fatisfactory intercourse between the two countries, upon the ground of reciprocal advantages and mutual convenience, as may promote and fecure to both perpetual peace and harmony, and having, for this defirable end, already laid the fourdation of peace and reconciliation, by the provisional articles figned at Paris, on the 30th of November, 1782, by the commissioners empowered on each part, which articles were agreed to be inferted in, and to conflitute the treaty of peace propoled to be concluded between the Crown of Great-Britain and the faid United States, but which treaty was not to be concluded until terms of peace should be agreed upon between Great-Britain and France, and his Britannic Majesty should be ready to conclude fuch treaty accordingly; and the treaty between Great-Britain and France having fince been concluded, his Britannic Majesty and the United States of America, in order to carry into full effect the provisional articles above mentioned, according to the tenor thereof, have constituted and appointed, that is to fay, his Britannic Majesty on his part, David Hartley,

Esq. member of the parliament of Great-Britain; and the said United States on their part, John Adams, Esq. late a commissioner of the United States of America, at the court of Versailles, late delegate in Congress from the State of Massa. chusetts, and chief justice of the said State, and minister plenipotentiary of the said United States, to their High Mightinesses the States-General of the United Netherlands; Benjamin Franklin, Esq. late delegate in Congress from the State of Penn-Sylvania, president of the convention of the said State, and minister plenipotentiary from the United States of America at the court of Versailles; and John Jay, Esq. late president of Congress, chief justice of the State of New-York, and minister plenipotentiary from the faid United States at the court of Madrid; to be the plenipotentiaries for concluding and figning the present Desinitive Treaty; who, after having reciprocally communicated their respective full powers, have agreed upon and confirmed the following articles:

Article I. His Britannic Majesty acknowledges the said United States, viz. New-Hampshire, Massachuletts-Bay, Rhode-Island and Providence plantations, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina and Georgia, to be free, sovereign and independent States; that he treats with them as such, and for himself, his heirs and successors, relinquishes all claims to the government, propriety, and territorial rights of the same, and every part thereof.

Art. II. And that all disputes, which might arise in suture, on the subject of the boundaries of the said United States, may be prevented, it is hereby agreed and declared, that the following are and shall be their boundaries, viz. from the north-west angle of Nova-Scotia, viz. That angle which is formed by a line drawn due north from the source of St. Croix river to the highlands, along the faid highlands, which divide those rivers that empty themselves into the river St. Lawrence from those which fall into the Atlantic ocean, to the north westernmost head of Connecticut river; thence down along the middle of that river to the forty-fifth degree of north latitude; from thence by a line due west on said latitude, until it strikes the river Iroquois or Cataraquy; thence along the middle of the faid river into lake Ontario; through the middle of faid lake until it strikes the communication by water between that lake and lake Erie; thence along the middle of

into lake Eric; through the middle

at the water communication between that lake and lake Hurse; thence along the middle of faid water communication; these through the middle of faid lake to the water communication between that lake and lake Superior; thence through lake Superior northward of the iffes Royal and Philipeaux to the Long lake; thence through the middle of laid Long lake and the water conmunication between it and the lake of the Woods, to the lad lake of the Woods; thence through the faid lake to the most north-western point thereof, and from thence in a due well course to the river Millistippi; thence by a line to be drawn along the middle of the faid river Miffiffippi until it shall interlect the northernmost part of the thirty-first degree of north South, by a line to be drawn due east from the determination of the line last mentioned in the latitude of thirty-one degrees north of the equator, to the middle of the river Apalachicola or Catahouche; thence along the middle thereof, to its junction with the Flint river; thence Rrait to the head of St. Mary's river; and thence down along the middle of St. Mary's river to the Atlantic ocean. East, by a line to be drawn along the middle of the river St. Croix, from its mouth in the bay of Fundy, to its fource, and from its fource directly north to the aforetaid highlands, which divide the rivers that fall into the Atlantic ocean, from those which fall into the river St. Lawrence, comprehending all islands within twenty leagues of any part of the shores or the United States, and lying between lines to be drawn due east from the points where the aforefaid boundaries between Nova-Scotia on the one part, and Eafl-Florida on the other, shall respectively touch the bay of Fundy, and the Atlantic ocean, excepting fach islands as now are, or heretofore have been, within the limits of the find province of Nova-Scotic

Act. III. It is a preed, that the people of the United States shall continue to enjoy, unmolested, the right to take sish of every fund on the Grand Bank, and on all the other banks of Newtonidlard, also in the golph of Sr. Lowrence, and at all other places in the rea, where the inhabituits of both countries of it at any time heretoire to sish. And also, that the inhabituits of the United States shall have liberty to take sish of every sord on such part of the coast of Newfoundistid, as British sishering shall a cribet not to day or cure the same on that island) a a site on the coasts. Evys and creeks, of all other of his Britannia Majury's committees in America; and that the American sishering shall have liberty to dry and cure sish in any of the unsettled bays, harbours and creeks, of Newa-Scotie,

GREAT-BRITAIN AND AMERICA.

Magdalen islands, and Labrador, so long as the same shall runsettled; but so soon as the same or either of them shall ted, it shall not be lawful for the said sishermen to dry or fish at such settlement, without a previous agreement so purpose with the inhabitants, proprietors, or possessions aground.

Art. IV. It is agreed, that the creditors on either fide meet with no lawful impediment to the recovery of th value, in sterling money, of all bona fide debts heretofore tracked.

Art. V. It is agreed, that Congress shall earnestly recom it to the legislatures of the respective States, to provide se restitution of all estates, rights and properties, which have confiscated, belonging to real British subjects; and also c estates, rights and properties, of persons resident in distripossession of his Majesty's arms, and who have not borne against the said United States; and that persons of any other scription shall have free liberty to go to any part or parts of Thirteen United States, and therein to remain twelve m unmolested, in their endeavours to obtain the restitution of of their estates, rights and properties, as may have been c cated; and that Congress shall also earnestly recommend t several States, a re-consideration and revision of all acts of respecting the premises, so as to render the faid acts or laws feelly confishent, not only with justice and equity, but with spirit of conciliation, which, on the return of the bleffir peace, should universally prevail: and that Congress shall earnestly recommend to the several States, that the estates, and properties, of such last-mentioned persons, shall be re: to them, they refunding to any persons who may now be in session, the bona side price (where any has been given) v such persons may have paid, on purchasing any of the said. rights or properties, fince the confication. And it is as that all persons, who may have any interest in confiscated. either by debts, marriage settlements, or otherwise, shall with no lawful impediment in the profecution of their rights.

Art. VI. That there shall be no future confiscations made any profecutions commenced, against any person or persons or by reason of the part which he or they may have tak the present war: and that no person shall any further loss or damage, either perty: and that those who may be at the time of the ratification of

immediately fet at liberty, and the profecution, so commenced, be discontinued.

Art. VII. There shall be a firm and perpetual peace between his Britannic Majesty and the said States, and between the subjests of the one and the citizens of the other; wherefore all liostilities, both by sea and land, shall from henceforth cease; all prisoners on both sides shall be set at liberty; and his Britannic Majesty shall, with all convenient speed, and without causing any destruction, or carrying away any negroes, or other property of the American inhabitants, withdraw all his armies, garrifors and fleets, from the faid United States, and from every poli, place and harbour, within the same, leaving in all fortifications the American artillery that may be therein; and shall also order and cause all archives, records, deeds and papers, belonging to any of the laid States, or their citizens, which, in the course of the war, may have fallen into the hands of his officers, to be forthwith restored, and delivered to the proper States and perfons to whom they belong.

Art. VIII. The navigation of the river Miffifippi, from its fource to the ocean, fault for ever remain free and open to the subjects of Great-Britain and the citizens of the United States.

Art. IX. In case it should so happen, that any place or territory belonging to Great-Britain, or to the United States, should have been conquered by the arms of either from the other, before the arrival of the said provisional articles in America, it is agreed, that the same shall be restored without difficulty, and without requiring compensation.

Art. X. The folemn ratifications of the present treaty, expedited in good and due form, shall be exchanged between the contrasting parties in the space of six months, or sooner, if possible, to be computed from the day of the signature of the present treaty. In witness whereof, we the undersigned, their ministers plenipotentiary, have, in their name, and in virtue of our full powers, signed with our hands the present Definitive Treaty, and caused the seals of our arms to be assisted thereto. Done at Paris, September 3, 1783.

TREATY

07

AMITY AND COMMERCE

BETWEEN

THEIR HIGH MIGHTINESSES THE STATES GENERAL OF THE UNITED NETHERLANDS, AND THE UNITED STATES OF . AMERICA.

(to WIT)

MEW-HAMPSHIRE, MASSACHUSETTS, RHODE-ISLAND AND PRO-VIDENCE PLANTATIONS, CONNECTICUT, NEW-YORK, NEW-JERSEY, PENNSYLVANIA, DELAWARE, MARYLAND, VIRGINIA, MORTH-CAROLINA, SOUTH-CAROLINA, AND GEORGIA.

L HEIR High Mightinesses the States-General of the United Netherlands, and the United States of America, to wit, New-Hampshire, Massachusetts, Rhode-Island and Providence plantations, Connecticut, New-York, New-Jersey, Pennsylvania, Delaware, Maryland, Virginia, North-Carolina, South-Carolina, and Georgia, defiring to ascertain, in a permanent and equitable manner, the rules to be observed relative to the commerce and correspondence which they intend to establish between their respective States, countries and inhabitants, have judged, that the faid end cannot be better obtained, than by establishing the most perfect equality and reciprocity for the basis of their agreement, and by avoiding all those burthensome preserences, which are usually the fources of debate, embarrassment and discontent; by leaving also each party at liberty to make, respecting commerce and navigation, such ulterior regulations, as it shall find most convenient to itself; and by founding the advantages of commerce folely upon reciprocal utility, and the just rules of free intercourse; reserving withal to each party the liberty of sds ' at its pleasure, other nations to a participation of ! vantages,

On these principles, their said High Mightinesses the Shiffs General of the United Netherlands have named for their plenspotentiaries, from the midst of their assembly, Messieurs their deputies for the foreign affairs; and the said United States of America, on their part, have furnished with full powers Mr. John Adams, late commissioner of the United States of America at the court of Versailles, heretofore delegate in Congress from the State of Massachusetts bay, and chief justice of the said State, who have agreed and concluded as follows: to wit,

Article I. There shall be a firm inviolable and universal peace, and sincere friendship, between their High Mightinesses the Lords the States-General of the United Netherlands and the United States of America, and between the subjects and inhabitants of the taid parties, and between the countries, islands, cities and places, fituated under the jurisdiction of the said United Netherlands and the said United States of America, their subjects and inhabitants of every degree, without exception of persons or places.

Art. II. The subjects of the said States-General of the United Netheriands shall pay in the ports, havens, roads, countries, islands, cities or places of the United States of America, or any of them, no other nor greater duties or imposts, of whatever nature or denomination they may be, than those which the nations the most savoured are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, which the said matters do, or shall enjoy, whether in passing from one port to another in the said States, or in going from any of those ports to any foreign port of the world, or from any foreign port of the world to any of those ports.

Art. III. The subjects and inhabitants of the said United States of America shall pay in the ports, havens, roads, countries, itlands, cities or places, of the said United Netherlands, c. any of them, no other, not greater duties or imposts, of whatever in ture or denomination they may be, that those which the said has the most favoured are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, immunities and exemptions in trade, navigation and commerce, which the taid nations do, or shall enjoy, whether in passing from one port to another in the said States, or from any one towards any one of those ports, from or to any foreign port of the world. And the United States of America, with their subjects and inhabitants, shall leave to those of their High Mightinesses, the

peaceable enjoyment of their rights in the countries, islands and seas, in the East and West Indies, without any hindrance or molestation.

Art. IV. There shall be an entire and persect liberty of conficience allowed to the subjects and inhabitants of each party, and to their families: and no one shall be molested in regard to his worship, provided he submits, as to the public demonstration of it, to the laws of the country. There shall be given moreover liberty, when any subjects or inhabitants of either party shall die in the territory of the other, to bury them in the usual burying places, or in decent and convenient grounds, to be appointed for that purpose, as occasion shall require. And the dead bodies of those who are buried shall not in any wise be molested; and the two contracting parties shall provide, each one in his jurisdiction, that their respective subjects and inhabitants may henceforward obtain the requisite certificates, in cases of deaths, in which they shall be interested.

Art. V. Their High Mightinesses the States-General of the United Netherlands, and the United States of America, shall endeavour, by all the means in their power, to defend and protell all vessels and other effects belonging to their subjects and inhabitants respectively, or to any of them, in their ports, roads, havens, internal feas, passes, rivers, and as far as their jurisdiction extends at sea; and to recover, and cause to be restored to the true proprietors, their agents or attornies, all fuch veffels and effects which shall be taken under their jurisdiction; and their vessels of war and convoys, in cales when they may have a common enemy, shall take under their protection all the veilels belonging to the subjects and inhabitants of either party, which shall not be laden with contraband goods, according to the description which shall be made of them hereafter, for places with which one of the parties is in peace, and the other at war, nor destined for any place blocked, and which shall hold the same course, or follow the same route: and they shall defend such vessels, as long as they shall hold the same course, or follow the same route, against all attacks, force and violence of the common enemy, in the same manner as they ought to protect and defend the veffels belonging to their own respective subjects.

Art. VI. The subjects of the contracting parties may, on one side and on the other, in the respective countries and States, dispose of their effects by testament, donation or other their heirs, subjects of one of the parties,

country of the other, or elsewhere, shall receive such furcessions, even ab intestate, whether in person, or by their attorney or fubfitute, even although they shall not have obtained letters of naturalization, without having the effect of fat commission contested under pretext of any rights or prerogatives of any province, city or private person; and if the heirs to whom fuch fuccessions may have fallen, shall be minors, the totals, or curators, established by the judge domiciliary, of the tid minors, may govern, direct, administer, sell, and alienate the effects fallen to the faid minare his inheritance; and in general, in relation to the fad offects, use all the rights and fulfil all the fur tlong, by the disposition of the laws, to guardiane thelefs, that this di curators; provided, nevetake place, but in cues where the testator shall . ed guardians, tutors, curtors by testament, gal instrument.

Art. VII. It I
party to employ fuch __voce_
fuctors, as they shall judge proper.

ree for the subjects of each

Art. VIII . Merchants, mafters and owners of thips, mariners, men of all kinds, thips and veffels, and all merchandiles and goods in general, and effects, of any of the confederates, or of the subjects thereof, shall not be seised or detained in any of the countries, lands, islands, cities, places, ports, shores or dominions whatfoever of the other confederate, for any military expedition, public or private use of any one, by arrests, violence, or any colour thereof; much less shall it be permitted to the subjects of either party to take, or extort by force, any thing from the subjects of the other party, without the confent of the owner; which, however, is not to be understood of feifures, detentions and arrests, which shall be made by the command and authority of justice, and by the ordinary methods, on account of debts or crimes, in respect whereof the proceedings must be by way of law, according to the forms of justice.

Art. IX. It is further agreed and concluded, that it shall be wiselly free for all merchants, commanders of ships, and other subjects and inhabitants of the contracting parties, in every place subjected to the jurisdiction of the two powers respectively, to manage, themselves, their own business: and moreover, as to the use of interpreters or brokers, as also in relation to the loading or unloading of their vessels, and every which has relation thereto, they shall be, on one side the other, considered and weated upon the sooting of

fubjects, or, at least, upon an equality with the most favoured nation.

Art. X. The merchant ships of either of the parties, coming from the port of an enemy, or from their own, or a neutral port, may navigate freely towards any port of an enemy of the other ally. They shall nevertheless be held, whenever it shall be required, to exhibit, as well upon the high seas as in the ports, their sea-letters and other documents described in the twenty-sisth article, stating expressly that their effects are not of the number of those which are prohibited as contraband. And not having any contraband goods for an enemy's port, they may freely and without hindrance pursue their voyage towards the port of an enemy. Nevertheless, it shall not be required to examine the papers of vessels convoyed by vessels of war, but credence shall be given to the word of the officer who shall condust the convoy.

Art. XI. If by exhibiting the sca-letters and other documents described more particularly in the twenty-fifth article of this treaty, the other party shall discover there are any of those forts of goods which are declared prohibited and contraband, and that they are configned for a port under the obedience of his enemy; it shall not be lawful to break up the hatches of fuch ship, nor to open any chest, coffer, packs, casks, or other vellels found therein, or to remove the smallest parcel of her goods, whether the faid vessel belongs to the subjects of their High Mightinesses the States-General of the United Netherlands, or to the subjects or inhabitants of the said United States of America, unless the lading be brought on shore in presence of the officers of the court of admiralty, and an inventory thereof made: but there shall be no allowance to sell, exchange or alienate the same, until after that due and lawful process shall have been had against such prohibited goods of contraband, and the court of admiralty, by a sentence pronounced, shall have confiscated the same; saving always as well the ship itself, as any other goods found therein, which are to be esteemed free, and may not be detained on pretence of their being infelted by the prohibited goods, much less shall they be confiscated as lawful prize: but on the contrary, when, by the visitation at land, it shall be found, that there are no contraband goods in the vetsel, and it shall not appear by the papers, that he who has taken and carried in the vessel has been able to discover any there, he ought to be condemned in all the charges, damages, and interests of them, which he shall have

canfed, both to the owners of veffels, and to the owners side trengite is of congress with which they shall be loaded, by his temperaty in taking and carrying them in: declaring molt expressly the free veffels shall affaire the liberty of the effects with which they shall be bound, and that this liberty shall extend ittest equally to the perfects who shall be found in a free veffel, who may not be taken out of her, unless they are military men, as finally in the service of an enemy.

Art. L.H. On the common, it is agreed, that whitever final he found to be laden by the subjects and inhabitants of either party, on any thip bilonging to the enemies of the other, or to their tubjects, although it be not comprehended under the fact of prohibited goods, the whole may be confileded in the fame manner as if it belonged to the enemy; except, revertibilets, thehaffetts and marchandites as were put on board such velicl before the declaration of war, or in the face of fix to make after the which effects shall not be in any manner tolgret to confinition, but shall be faithfully and without delivered the financial to the owners, who shall claim them, or come them so he chessed, is fore the confincation and file; store that if we can be if the claim could not be made but in to the second ment's after the file, which ought to be publics province, as well less that if the laid merchandiles are contratured, at shall by no means be lewful to transport them at the to any post belonging to encares.

Att. Kill. And that more call stall care may be taken for the rectardy of an jects and people of either pury, that they do not dufer not botton from one vericles of war, or privaters of the coher pacts, it is all be forbidden to all commanders of vericles of war, and other simed vericles of the faid States-Gener of the United Netherlands, and the faid United States America, as well as to all their officers, indipoles and people, give any officient, or one any damage to their or the other party and if they are to the contrary, they hadd by upon the factor of they are to the contrary, they hadd by upon the factor of common only plants of any being found guilty, after a factor of the contrary their proper judges, and more ever, charges to a contrary to determ for all damages and interesthered by replaced a transport to determine of pain and only judice of species.

Are seek. It is to more of topoliting of what has been failed to premise of invareers, or interstout of veriels aimed for war, under count fibrational on account of private performance to a decimal or achieve to a confident cautic.

before competent judges, either to be entirely responsible for the malversations which they may commit in their cruizes or voyages, as well as for the contraventions of their captains and officers against the present treaty, and against the ordinances and edists which shall be published in consequence of, and in consormity to it, under pain of forfeiture and nullity of the said commissions.

Art. XV. All vessels and merchandises, of whatsoever nature, which shall be rescued out of the hands of any pirates or robbers, navigating the high seas without requisite commissions, shall be brought into some port of one of the two States, and deposited in the hands of the officers of that port, in order to be restored entire to the true proprietor, as soon as due and sufficient proofs shall be made concerning the property thereof.

Art. XVI. If any ships or vessels, belonging to either of the parties, their subjects or people, shall, within the coasts or dominions of the other, slick upon the sands, or be wrecked, or suffer any other sea damage, all friendly assistance and relief shall be given to the persons shipwrecked, or such as shall be in danger thereof; and the vessels, essels and merchandites, or the part of them which shall have been saved, or the proceeds of them, if, being perishable, they shall have been sold, being claimed within a year and a day by the masters or owners, or their agents or attornies, shall be restored, paying only the reasonable charges, and that which must be paid in the same case for the salvage by the proper subjects of the country. There shall also be delivered them safe-conducts or passports for their free and safe passage from thence, and to return each one to his own country.

Art. XVII. In case the subjects or people of either party, with their shipping, whether public and of war, or private and of merchants, be forced through stress of weather, pursuit of pirates or enemies, or any other urgent necessity for seeking of shelter and harbour, to retreat and enter into any of the rivers, creeks, bays, ports, roads or shores, belonging to the other party, they shall be received with all humanity and kindness, and enjoy all friendly protestion and help; and they shall be permitted to resresh and provide themselves at reasonable rates with victuals, and all things needful for the sustenance of their perfons, or reparation of their ships; and they shall no ways be detained or hindered from returning out of the said ports or roads, but may remove and depart, when and whither they please, without any lett or hindrance.

Art. XVIII For the better promoting of commerce on both fides, it is agned, that if a war should break out between their High Mightinesses the States-General of the United Netherlands and the United States of America, there shall always be granted to the subjects on each side, the term of nine months after the date of the rupture, or the proclamation of war, to the end that they may retire with their effects, and transport them where they please; which it shall be lawful for them to do, as well as to sell or transport their effects and goods in all freedom, and without any hindrance, and without being able to

proceed, during the their effects, much I shall be given them they would carry awa ports of their respective counfor the voyage. And no prilawful, at least, if the de be known in the last port ons; on the contrary, there is and their effects which fafe-conducts for the neutral and for the time necessary to at fea, shall be adjusted war was not, or could not me vessel taken has quitted.

But for whatever may have been taken from the subjects and inhabitants of either party, and for the offences which may have been given them in the interval of the said terms, a complete satisfaction shall be given them.

Art. XIX. No subject of their High Mightinesses the States-General of the United Netherlands shall apply for, or take any committion, or letters of marque, for arming any ship or ships to all as privateors against the said United States of America, or any of them, or the subjects and inhabitants of the said United States, or any of them, or against the property of the inhibitants of any of them, from any prince or state with which the faid United States of America may happen to be at war: nor finall any subject or inhabitant of the faid United States of Americe, or any of them, apply for, or take any commission, or letters of marque, for aiming any ship or ships, to act as privateers against the High and Mighty Lords the States-General of the United Netherlands, or against the subjects of their High Mightineffes, or any of them, or against the property of any one of them, from any prince or flate with which their High Mightinesses may be at war. And if any person of either intion shall take such commission, or letters of marque, he still be punished as a pirate.

Art. XX. If the vessels of the surjects or inhabitants of one of the parties come upon any coast belonging to either of the said all es, but not willing to enter into port, or being entered

into port, and not willing to unload their cargoes, or break rulk, or take in any cargo, they shall not be obliged to pay, neither for the vessels, nor the cargoes, any duties of entry in or out, nor to render any account of their cargoes, at least if there is not just cause to presume, that they carry to an enemy merchandises of contraband.

Art. XXI. The two contracting parties grant to each other, mutually, the liberty of having, each in the ports of the other, confuls, vice-confuls, agents and commissiones of their own appointing, whose functions shall be regulated by particular agreements, whenever either party chuses to make such appointments.

Art. XXII. This treaty shall not be understood in any minmer to derogate from the ninth, tenth, nineteenth and twentyfourth articles of the treaty with France, as they were numbered in the same treaty concluded the 6th of February, 1778, and which make the articles ninth, tenth, seventeenth, and twenty-second, of the treaty of commerce now subsisting between the United States of America and the crown of France: nor shall it hinder his Catholic Majesty from acceding to that treaty, and enjoying the advantages of the said four articles.

Art. XXIII. If at any time the United States of America shall judge necessary to commence negociations with the king or emperor of Morocco and Fez, and with the regencies of Algiers, Tunis or Tripoli, or with any of them, to obtain passports for the security of their navigation in the Mediterranean sea, their High Mightinesses promite, that upon the requisition which the United States of America shall make of it, they will second such negociations in the most savourable manner, by means of their consuls residing near the said king, emperor, and regencies.

Art. XXIV. The liberty of navigation and commerce shall extend to all torts of merchandiles, excepting only those which are distinguished under the name of contraband, or merchandises prohibited: and under this denomination of contraband, and merchandises prohibited, shall be comprehended only warlike stores and arms, as mortars, artillery, with their artifices and appurtenances, suffices, bombs, grenades, gunpowder, saltpetre, sulphur, match, bullets and balls, pikes, sabres, lances, halberts, casques, cuirasses, and other sorts of arms; as also, soldiers horses, saddles, and surniture for horses. All other effects and merchandises, not before specified expressly, and even all sorts of naval matters, however proper they may be

Stion and equipment of vellels of war, or for the for the one or other fort of machines of war, by la manufa or fea, than not be judged contraband, neither by the les to any pretended interpretation whatever, nor accordi they be comprehended under the notion of a they, or contraband : fo that all effects and merchandi prohibit which are not expressly before named, may, without any esce tion, and in perfect liberty, be transported by the subjects as inhabitants of both allies, from and to places belonging to the enemy; excepting only, the places which at the fame time fall be befreged, blocker nd those places only shall be held for fuch, w ed nearly by fome of the

belligerent power-,

Art. XXV. To be avoided and of the two part to the subjects or with fea-letters or panpa diffention and quarrel my en agreed, that in cale one war, the vellels belong other ally shall be provide ing the name, the property

and the burthen of the veilel, as also the name of the place of abode of the matter or commander of the faid vellel; to the end that thereby it may appear, that the veffel really and truly belongs to subjects or inhabitants of one of the parties; which patipents thall be drawn and distributed according to the form annexed to this treaty. Each time that the velicl shall return, the finuld have futh her pulport renewed; or, at leaft, they ought not to be of more ancient date than two years, before the ve fel has been returned to her own country. It has been also agreed, that fuch veifels being loaded, ought to be provided not only with the faid pafiports or fea-letters, but also with a general passport, or with particular passports, or manifests, or other public documents, which are ordinarily given to vessels outward bound, in the ports from whence the velfels have fet fail in the last place, containing a specification of the cargo, of the place from whence the veffels have for fail in the last place, contains ing a specification of the cargo, of the place from whence the vessel departed, and of that of her destination; or, instead of all there, with certificates from the magistrates, or governors of cities, places and colonies from whence the vessel came, given in the usual form, to the end that it may be known whether there are any effects prohibited or contraband on board the veil-li, and whether they are defined to be carried to an eacmy's country or not. And in cale any one judges proper to express in the find accomments, the perions to whom the effects

5, he may do it freely, without, however, being bound to and the omission of such expression cannot, and ought cause a confication.

LXXVI. If the vessels of the said subjects or inhabitants her of the parties, sailing along the coasts, or on the high are met by a vessel of war, or privateer, or other armed of the other party; the said vessels of war, privateers or l vessels, for avoiding all disorder, shall remain without the of cannon, but may send their boats on board the merchants which they shall meet in this manner, upon which they tot pass more than two or three men, to whom the master mmander shall exhibit his passport, containing the proof the vessel, according to the form annexed to this: and the vessel, after having exhibited such a passport, iter, and other documents, shall be free to continue her e, so that it shall not be lawful to molest her, or search her, manner, nor to give her chace, nor to force her to alter surse.

. XXVII. It shall be lawful for merchants, captains, and anders of vessels, whether public and of war, or private of merchants, belonging to the said United States of Ameor any of them, or to their subjects and inhabitants, to freely into their service, and to receive on board of their s in any port or place in the jurisdiction of their High timesses aforesaid, seamen or others, natives or inhabitants by of the said States, upon such conditions as they agree on, without being subject, for this, to any fine, ty, punishment, process or reprehension whatsoever. d reciprocally, all merchants, captains and commanders,

ging to the faid United Netherlands, shall enjoy all in the and places under the obedience of the said United States nerica, the same privilege of engaging and receiving seasor others, natives or inhabitants of any country of the sation of the said States-General: provided, that neither on de nor the other, they may not take into their service such eir count; ymen who have already engaged in the service of other party contracting, whether in war or truer they meet them by land or sea; at least, if the afters under the command of whom such all, will not of their own consent discharge e, upon pain of being otherwise treats

ers.

ţ.

Art. XXVIII. The affair of the refraction shall be regional to the magniferates of cities refractively, where it shall be judged that there is any room to complain in this respect.

Art. XXIX. The present treaty shall be ratified and approved by their High Mightinesses the States-General of the United Netherlands, and by the United States of America; and the acts of ratification shall be delivered, in good and due form, on one side and on the other, in the space of six months, or sooner, if possible, to be computed from the day of the signature.

In faith of which, we the deputies and plenipotentiaries of the Lords the States-General of the United Netherlands, and the minister plenipotentiary of the United States of America, in virtue of our respective authorities and full powers, have signed the present treaty, and apposed thereto the feels of our arms.

452 DECREE OF THE QUEEN OF PORTUGAL

prosper in his lawful affairs, our prayer is to all the school mentioned, and to each of them separately, where the field master shall arrive with his vessel and cargo, that they may please to receive the said master with goodness, and to trust him in a becoming manner, permitting him, upon the usual tost and expenses in passing and repassing, to pass, navigate, and frequent the ports, passes and territories, to the end to transact his business where and in what manner he shall judge proper: whereof we shall be willingly indebted.

In witness and for cause whereof, we affix hereto the seal of this city.

(In the margin.)

By ordinance of the High and Mighty Lords the States-General of the United Netherlands.

AUTHENTIC COPY OF THE

DECREE OF THE QUEEN OF PORTUGAL,

FOR OPENING A COMMERCIAL INTERCOURSE BETWEEN HER SUBJECTS AND THOSE OF THE UNITED STATES.

PORTUGAL.

Her Majesty has been pleased to order the following Decree to be transmitted to her Royal Court of Exchequer, that publication may be made of the same.

WHEREAS by the Declaration of the Independence of the United States of North-America, the object intended by the Royal Decree of the 4th of July, 1776, and the publication thereof, by our Court of Exchequer, on the 5th of the fame month, have ceased to operate, We are therefore pleased to abolish and annul the decree and publication aforesaid; and do hereby order, that free entrance be granted in all the ports of our dominions, unto all ships and vessels coming from North-America, in the same manner as was somethy liad in the admis-

ion of those which arrived from the said colonies in the ports foresaid, and that all hospitality and savour be shewn them, which is usually done to other friendly nations.

Our Court of Exchequer will see this performed accordingly; and are ordered to cause this decree to be printed and set up in all public places of our city of Lisbon, and of other ports of this kingdom and Algarve, that all persons may have due notice thereof, and none plead ignorance of the same.

Given at Salvaterta de Magos, the 13th of February, 1783.

(Signed) With her Majesty's Cypher.

And in order that all persons may have notice of this royal resolution of our Lady aforesaid, we have caused these presents to be printed, and affixed at all public places of this city and other parts of this kingdom, agreeable to the tenor of the Decree above mentioned.

Lisbon, this 17th of February, 1783.

(Signed) GONSOLA JOSE DA SILVEIRA PRETO, JOSE DA CONSTA RIBEIRO.

TREATY OF AMITY AND COMMERCE

BETWEEN

HIS MAJESTY THE KING OF PRUSSIA, AND THE THIRTEEN UNITED STATES OF AMERICA.

America, desiring to fix, in a permanent and equitable manner, the rules to be observed in the intercourse and commerce they desire to establish between their respective countries, his Majesty and the United States have judged, that the said end cannot be suiter obtained than by taking the most perfect equality and re-

with this view, his Majesty the King of Prussia has nominated

Mishtineffes the Statesad il Inited States have, Big. late on of their ministers plenipotentiary for negociating a peace, heretofore a delegate in Congress from the State of Messenhittis,
and chief justice of the same, and now minister plenipotentisty
of the United States with his Britannic Majesty; Dr. Benjamin
Franklin, late minister plenipotentiary at the Court of Versailles,
and another of their ministers plenipotentiary for negociating a
peace; and Thomas Jesserson, heretofore a delegate in Congress
from the State of Virginia, and governor of the said State, and
now minister plenipotentiary of the United States at the Court
of his Most Christian Majesty, which respective plenipotentiaries, after having exchanged their full powers, and on mature
deliberation, have concluded, settled and signed the following
articles;

Article I. There shall be a firm, inviolable and universal perce and sincere friendship between his Majesty the King of Prusia, his heirs, successors and subjects, on the one part, and the United States of America and their citizens, on the other, without exceptions of persons or places.

Art. II. The subjects of his Majesty the King of Prussa may frequent all the coasts and countries of the United States of America, and reside and trade there in all forts of produce, manufictures and merchandise; and shall pay within the said United States no other or greater duties, charges or fees whatsoever, than the most savoured nations are or shall be obliged to pay; and they shall enjoy all the rights, privileges, and exemptions in navigation and commerce, which the most savoured nation does or shall enjoy; submitting themselves, nevertheless, to the laws and usages there established, and to which are submitted the detizens of the United States and the citizens and subjects of the most savoured nations.

Art. III. In like manner the citizens of the United States of America may frequent all the coasts and countries of his Majesty the King of Prussia, and reside and trade there in all sorts of produce, manufactures and merchandise, and shall pay in the dominions of his taid Majesty, no other or greater duties, charges or sees whatsoever, than the most favoured nation is or shall be obliged to pay; and they shall enjoy all the rights, privileges, and exemptions in navigation and commerce, which the most savoured nation does or shall enjoy; submitting themselves nevertheless to the laws and usages there established, and to which are submitted the subjects of his Majesty the King of Prussia and the subjects and currents of the most savoured nations.

it. IV. More especially each party shall have a right to carry own produce, manufactures and merchandile, in their own ny other veilels, to any parts of the dominions of the other. re it shall be lawful for all the subjects or citizens of that r freely to purchase them; and thence to take the produce, ufactures and merchandife of the other, which all the faid ens or subjects thall in like manner be free to fell them, payin both cases such duties, charges and fees only, as are or be paid by the most favoured nation. Nevertheless the of Pruffis and the United States, and each of them, ree to themselves the right where any nation restrains the transation of merchandife to the veliels of the country of which the growth or manufacture, to establish against such nation lating regulations; and also the right to prohibit, in their effive countries, the importation and exportation of all meradife whatfoever, when reasons of state shall require it. In case, the subjects or citizens of either of the contracting parshall not import nor export the merchandise prohibited by other; but if one of the contracting parties permits any r nation to import or export the fame merchandife, the citior subjects of the other shall immediately enjoy the same

ort. V. The merchants, commanders of vessels, or other subsor citizens of either party, shall not, within the ports or distion of the other, be forced to unload any fort of merndise into any other vessels; nor to receive them into their in, nor to wait for their being loaded longer than they see.

art. VI. That the vessels of either party loading within the is or jurisdiction of the other, may not be uselessly harasted letained, it is agreed, that all examinations of goods required the laws, shall be made before they be laden on board the el, and that there shall be no examination after; nor shall the el be searched at any time, unless articles shall have been in therein clandestinely and illegally; in which case the perby whose order they were carried on board, or who carried in without order, shall be liable to the laws of the laws on the laws of the la

ret. VII. Each party shall under r power, to protest and deleonging to the citizens or subswithin the ex ent of their jurisdiction, by sea or by land; and shall use all the forts to recover, and cause to be restored to their right owner, their vessels and effects which shall be taken from them within the extent of their said jurisdiction.

Art. VIII. The velfels of the fubjects or citizens of either party, coming on any coast belonging to the other, but no willing to enter into port, or being entered into port, and not willing to unload their cargoes or break bulk, shall have liberty to depart, and to purfue their voyage without moleftation, tol without being obliged to render account of their cargo, or to atfoever, except those elbb. pay any duties, charges or fee. lished for vessels entered t, and appropriated to the of other establishments for maintenance of the port and stors, which duties, charges the fafety and convenience of and fees, shall be the same, a I be paid on the fame foot ing as in the case of subjects or sens of the country where they are established.

foundered, or otherwise damaged on the coasts, or within the clominion of the other, their respective subjects or citizens shall receive as well for themselves as for their vessels and essess, the same assistance which would be due to the inhibitants of the country where the damage happens, and shall pay the same charges and dues only as the said inhabitants would be subject to pay in a like case; and if the operations of repair shall require that the whole or any part of their cargo be unladed, they shall pay no duties, charges or sees, on the pair which they shall relade and carry away. The ancient and barbarous right to wrecks of the sea shall be entirely abolished with respect to the subjects or citizens of the two contrasting parties.

Art. N. The citizens or subjects of each party shall have power to dispose of their personal goods within the jurisdiction of the other, by testament, donation or otherwise; and their representances, being subjects or citizens of the other party, shall independ to their said personal goods, whether by testament or ad intestate, and may take postession thereof, either by themselves, or by others acting for them, and dispose of the same at their will, paying such duties only as the inhabitants of the country, wherein the said goods are, shall be subject to pay in like cases: and in case of the absence of the representative, such care shall be taken of the said goods, and for so long a time, as would be taken of the goods of a native in like case, until the lawful owner may take measures. For receiving them. And if

question shall arise among several claimants, to which of them the faid goods belong, the same shall be decided finally by the laws and judges of the land wherein the faid goods are. And where, on the death of any person holding real estate within the territories of the one party, such real estate would, by the laws of the land, descend on a citizen or subject of the others were he not disqualisted by alterage, such subject shall be allowed a reasonable time to sell the same, and to withdraw the proceeds without molestation, and exempt from all rights of detraction an the part of the government of the respective States. But this article shall not derogate in any manner from the force of the laws already published, or hereaster to be published, by his Majesty the King of Prussia, to prevent the emigration of his subjects.

Art. XI. The most perfect freedom of conscience, and of worship, is granted to the citizens or subjects of either party, within the jurisdiction of the other, without being liable to molestation in that respect, for any cause or insult on the religion of others. Moreover, when the subjects or citizens of the one party shall die within the jurisdiction of the other, their hodies shall be buried in the usual burying grounds, or other decent and suitable places, and shall be protected from violation or disturbance.

Art. XII. If one of the contracting parties should be engaged in war with any other power, the free intercourse and commerce of the subjects or citizens of the party remaining neuter with the belligerent powers shall not be interrupted. On the contrary, in that case, as in full peace, the vessels of the neutral party may navigate freely to and from the ports, and on the coasts of the belligerent parties, free vessels making free goods; infomuch that all things shall be adjudged free, which shall be on board any vessel belonging to the neutral party, although such things belong to an chemy of the other; and the same freedom shall be extended to persons who shall be on board a free vessel, although they shall be enemies to the other party, unless they be soldiers in the assual service of such menty.

Art. XIII. And in the fame case, of one of the contrasting parties being engaged in war with any other power, to prevent all the difficulties and mifunderstandings that usually arise respecting the merchandile heretofore called contraband, such as arms, ammunition and military stores of every kind, no such articles, carried in the vessels, or by the subjects of the

owners the full van current price at the fuppoled, of a vell contraband, if the out the goods fuppadmitted to do it; and into any port, nor proceed on her voy

to be ascertained by [the leftination. But in the case articles heretofore decared welfel stopped will deliver traband nature, he shall be it not in that case be carried d, but shall be allowed to

XIV. And in the same care, where one of the parties is engiged in war with another power, that the vessels of the neutral party may be readily and certainly known, it is agreed, that they shall be provided with sea letters, or passports, which fhall express the name, the property, and burden of the veffel, as also the name and dwelling of the master; which passports shall be made out in good and due forms, to be fettled by conventions between the parties, whenever occasions shall require; fhall be renewed as often as the veilel fhall return into port; and shall be exhibited, whenever required, as well in the open fea as in port. But if the faid veffel be under convoy of one or more reffels of war, belonging to the neutral party, the simple declaration of the officer commanding the convoy, that the faid veffel belongs to the party of which he is, shall be confidered as establishing the fact, and shall relieve both parties from the trouble of further examination.

XV. And to prevent entirely all daforder and violence in fuch cases, it is supplied, that when the vessels of the neutral party, saling without convoy, shall be met by any vessel of war, public or private, of the other party, such vessel of war shall not approach within cannon shot of the said neutral vessel, nor send more than two or three men in their boat on board the saine, to examine her sea letters or passports, all persons belonging to any vessel of war, public or who shall moiest or injure, in any manner what people, vessels, or effects of the other party, shall be

in their persons and property, for damages and interest; sufficient security for which shall be given by all commanders of private armed vessels, before they are commissioned.

XVI. It is agreed, that the subjects or citizens of each of the contracting parties, their vessels and essels, shall not be liable to any embargo or detention on the part of the other, for any millitary expedition, or other public or private purpose whatsoever. And in all cases of seizure, detention, or arrest, for debts contracted, or offences committed by any citizen or subject of the one party, within the jurisdiction of the other, the same shall be made and prosecuted by order and authority of law only, and according to the regular course of proceedings usual in such cases.

XVII. If any vessel or effects of the neutral power be taken by an enemy of the other, or by a pirate, and retaken by the other, they shall be brought into some port of one of the parties, and delivered into the custody of the officers of that port, in order to be restored entire to the true proprietor, as soon as due proof shall be made concerning the property thereof.

XVIII. If the citizens or subjects of either party, in danger from tempests, pirates, enemics, or other accident, shall take refuge, with their vessels or effects, within the harbours or jurisdiction of the other, they shall be received, protected, and treated with humanity and kindness, and shall be permitted to furnish themselves at reasonable prices with all refreshments, provisions, and other things necessary for their sustenance, health and accommodation, and for the repair of their vessels.

XIX. The vessels of war, public and private, of both parties, shall carry freely wheresoever they please, the vessels and effects taken from their enemies, without being obliged to pay any duties, charges, or sees, to officers of admiralty, of the customs, or any others; nor shall such prizes be arrested, searched or put under legal process, when they come to, and enter the ports of the other party; but may freely be carried out again at any time, by their captors, to the places expressed in their commissions, which the commanding officer of such vessels shall be obliged to shew. But no vessel which shall have made prizes on the subjects of his Most Christian Majesty the King of France, shall have a right of asylum in the ports or havens of the said United States: and if any such be forced therein, by tempest or dangers of the sea, they shall be obliged to depart as soon as possible, according to the tener of the treaties

existing between his Sid Most Christian Majesty and the Mid United States.

XX. No citizen or subject of either of the controlling parties shall take from any power with which the other may be st war, any commission or letter of marque for arming any vessel to all as privateer against the other, on pain of being punished as a pirate; nor shall either party bire, lend, or give any part of their naval or military force to the enemy of the other, to aid them offensively or desensively against that other.

XXI. If the two contracting parties should be engaged in a war against a common enemy, the following points shall be observed between them:

: it. If a velled of one of the parties, retaken by a privateer of the other, shall not have been in possossion of the enemy more than twenty-four hours, she shall be restored to the first owner for one third of the value of the vessel and cargo: but of the shall have been more than twenty-four hours in the polfelfion of the enemy, the shall belong wholly to the recaptor. ed. If in the same case the recapture were by a public vessel of war of one party, restitution shall be made to the owner for one thirtieth part of the value of the veilel and cargo, if the fliall not have been in the possession of the enemy more than twenty-four hours, and one tenth of the faid value where the thall have been longer, which fums shall be distributed in gratuftics to the recaptors. 3d. The restitution in the cases afoelaid, shall be after due proof of property, and surety given for the part to which the recaptors are entitled. 4th. The vessels of war, public and private, of the two parties, shall be reciprocally admitted with their prizes into the respective ports of each: but the faid prizes shall not be discharged nor fold there, until their legality shall have been decided, according to the laws and regulations of the state to which the captor belongs, but by the judicatures of the place into which the prize shall have been conducted. 5th. It shall be free to each party to make fuch regulations as they shall judge necessary, for the conduct of their respective vessels of war, public and private, relative to the veifels which they shall take and carry into the ports of the two parties.

XXII. Where the parties shall have a common enemy, or shall both be neutral, the vessels of war of each shall upon all occasions take under their protection the vessels of the other going the same course, and shall defend such vessels as long

as they hold the same course, against all force and violence, in the same manner as they ought to protest and defend vessels belonging to the party of which they are.

XXIII. If war should arise between the two contrasting parties, the merchants of either country, then refiding in the other, shall be allowed to remain nine months to collect their debts, and fettle their affairs, and may depart freely, carrying off all their effects, without molestation or hindrance; and all women and children, scholars of every faculty, cultivators of the earth, artisans, manufacturers, and fishermen, unarmed and inhabiting unfortified towns, villages or places, and in general all others, whose occupations are for the common sublistence and benefit of mankind, shall be allowed to continue their respective employments, and shall not be molested in their persons; nor shall their houses or goods be burnt, or otherwise destroyed, nor their fields walted by the armed force of the enemy, into whose power, by the events of war, they may happen to fall: but if any thing be necessary to be taken from them for the use of such armed force, the same shall be paid for at a reasonable price. And all merchant and trading vessels employed in exchanging the products of different places, and thereby rendering the necessaries, conveniencies, and comforts of human life more easy to be obtained, and more general, shall be allowed to pass free and unmolested: and neither of the contracting parties shall grant or iffue any committion to any private armed vessels, empowering them to take or destroy such trading vessels, or interrupt such commerce.

XXIV. And to prevent the destruction of prisoners of war. by sending them into distant and inclement countries, or by crowding them in close and noxious places, the two contracting parties solemnly pledge themselves to each other, and to the world, that they will not adopt any fuch practice; that neither will fend the prisoners whom they may take from the other, into the East-Indies, or any other parts of Asia or Africa, but that they shall be placed in some part of their dominions in Europe or America, in wholesome fituations; that they shall not be confined in dungeons, prison ships, nor prisons, nor be put into irons, nor bound, nor otherwise restrained in the use of their limbs; that the officers shall be enlarged on their paroles within convenient districts, and have comfortable quarters; and the common men be disposed in cantonments, open and exten-tive enough for air and exercise, and lodged in barracks as se are provided by the party in whole power at that the officers thall also be

daily furnished by the party in whose power they as many rations, and of the fame articles and allowed by them, either in kind or commutation, to effects of equal rank in their own army; and all others shall be daly furnished by them with such rations as they allow to a conmon foldier in their own service, the value whereof shill be paid by the other party, on mutual adjustment of accounts for the fustenance of prisoners at the choic of the war; and the faid accounts shall not be mingled with, or set of square any others, nor the balances due on them be withheld as a fatisfaction or reprital for any other article, or for any other caule, real or pretended, whatever; that each party shall be allowed to keep a commissary of priloners of their own sppointment, with every separate cantonment of prisoners in possession of the other; which commissary shall see the prifoners as often as he pleafes, thall be allowed to receive and distribute whatever comforts may be sent to them by their friends, and shall be free to make his reports in open letters to those who employ him; but if any officer shall break his parole, or any other prisoner shall escape from the limits of his cantonment, after they shall have been designated to him, Such individual officer or other prisoner shall forfeit so much of the benefit of this article, as provides for his enlargement on parole or cantonment. And it is declared, that neither the pretence that war dissolves all treaties, nor any other whatever, shall be considered as annulling or suspending this and the next preceding article; but, on the contrary, that the flate of war is precifely that for which they are provided, and during which they are to be as ficredly observed as the most acknowledged articles in the law of nature or nations,

XXV. The two contracting parties grant to each other the liberty of having each in the ports of the other, confuls, vice-confuls, agents, and commissaries of their own appointment, whose functions shall be regulated by particular agreement, whenever either party shall choose to make such appointment; but if any such confuls shall exercise commerce, they shall be submitted to the same laws and ulages to which the private individuals of their nation are submitted in the same place.

XXVI. If either party shall hereafter grant to any other nation, any particular favour in navigation or commerce, it shall immediately become common to the other party—free-ly, where it is freely granted, to such other nation—or on title 3 the compensation, where such nation does the same.

VII. His Majefty the King of Prussia and the Unities of America, agree that this treaty shall be in force the term of ten years from the exchange of ratifica-and if the expiration of that term should happen dure course of a war between them, then the articles berovided for the regulation of their condust during such shall continue in force until the conclusion of the which shall re-establish peace; and that this treaty e ratified on both sides, and the ratifications exchanged is one year from the day of its signature.

testimony whereof, the plenipotentiaties before-menhave hereto subscribed their names and assixed their at the places of their respective residence, and at the expressed under their several signatures.

the fame reciprocally beneficial and attractory they have reciprocally beneficial and attractory they have reciprocally beneficial and attractory they have reciproftively, named their Plonipotentiaries, and given them full powers to treat of, and conclude the faid Treaty, that is to fav, his Pritannic Majefly has named for his plenipotentiary, the Right Hon. Wm. Wyndham Baron Grenville of Wotton, one of his Majefly's privy council, and his Majefly's principal fecretary of flate for foreign affairs; and the Prefident of the full United States, by and with the advice and confeat of the Senate thereof, hath appointed for their plenipotentiary, the Hon. John Jay, chief justice of the faid United States, and their envoy extraordinary to his Majefly, who have agreed on, and concluded the following

ARTICLES:

Art. 1. There shall be a firm inviolable and universal Perce, and a true and sincere friendship between his Britannic Majesty, his heirs and successors, and the United Stats of America; and between their respective countries, territories, cities, towns and people of every degree, without exception of persons or places.

Art. 2. His Majerty will withdraw all his troops and garrilons from all polis and places within the boundary lines affigured by the treaty of peace to the United States. This evacurrien shall take place on or before the first day of June, 179% and all the proper measures shall in the interval be taken by concert between the government of the United States, and his Morethy's governor general in America, for fettling the previous arrangements which may be necessary respecting the delivery of the tod posits: the United States in the mean time at their discretion extending their fettlements to any part within the faid be and my line, except within the precincts or juritdiction of any of the laid polis. All fettlers and traders within the preemar or juntaktion of the laid posts, shall continue to enjoy. unna letted, all their property of every kind, and shall be protraced therein. They fluil be at full liberty to remain there, or to remove with all or any part of their effects; and it shall also he ties to them to fell their lands, houses, or effects, or to rethin the property thereof, at their difference; such of them as finil continue to refine within the faid boundary lines, shall not he compelled to become citizens of the United States, or to take thy eath of allegiance to the government thereof, but they shall be at full liberty to to do, if they think proper, and they fitall make and declare their clifftion within one year after

the efficient aforesaid. And all persons who shall continue there there the expiration of the said year, without having declared their intention of remaining subjects of his Britannic Majesty, shall be considered as having elected to become citizens of the United States.

Art: 3. It is agreed that it shall at all times be free to his Majesty's subjects, and to the citizens of the United States, and also to the Indians dwelling on either side of the said boundary line, freely to pass and repass by land or inland navigation, into the respective territories and countries of the two parties on the continent of America [the country within the limits of the Hudson's Bay Company only excepted] and to navigate all the lakes, rivers, and waters thereof, and freely to carry on trade and commerce with each other. But it is understood, that this article does not extend to the admission of vessels of the United States into the sea ports, harbours, bays or creeks of his Majesty's said territories; nor into such parts of the rivers in his Majesty's said territories as are between the mouth thereof, and the highest port of entry from the sea, except in small vessels trading bona side between Montreal and Quebec, under such regulations as shall be established to prevent the possibility of any frauds in this respect. Nor to the admission of British vessels from the fea into the rivers of the United States, beyond the highest ports of entry for foreign vessels from the les. The river Mississippi shall, however, according to the treaty of peace, be entirely open to both parties; and it is further agreed. that all the ports and places on its eastern side, to which soever of the parties belonging, may freely be restored to, and used by both parties, in as ample a manner as any of the Atlantic ports or places of the United States, or any of the ports or places of his Majesty in Great-Britain.

All goods and merchandifes whose importation into his Majesty's said territories in America, shall not be entirely prohibited, may freely, for the purposes of commerce, be carried into the same in the manner aforesaid, by the citizens of the United States, and such goods and merchandise shall be subject to no higher or other duties than would be payable by his M jesty's subjects on the importation of the same from Europe into the said territories. And in like manner, all goods and merchandises whose importation into the United States shall not be wholly prohibited, may be freely, for the purposes of commerce, be carried into the same, in the manner aforesaid, by his Majesty's subjects, and such goods and merchandise shall be subject to no higher or other duties than would be payable by

the citizens of the United States on the importation of the faile, in American velfels, into the Atlantic ports of the fail State. And all goods not prohibited, to be exported from the fail territories, respectively, may in like manner be carried out of the fame by the two parties respectively, paying duty as aforefaid.

No duty of entry shall ever be levied by either party on peltries brought by land, or inland navigation into the faid territories respectively, nor shall the Indians passing of re-passing with their own proper goods and effects of whatever. But goods in bales, or other large packages unusual among Indians, shall not be considered as goods belonging bona falt to Indians.

No higher or other tolls or rates of ferriage than what are or shall be psyable by natives, shall be demanded on either side; and no duties shall be payable on any goods which shall merely be carried over any of the portages or carrying places on either side, for the purpose of being immediately re-imbarked and carried to some other place or places. But as by this stipulation it is only meant to secure to each purpose a free passinge across the portages on both sides, it is agreed, that this exemption from duty shall extend only to succeed, that this exemption from duty shall extend only to succeed, that this exemption from duty shall extend only to succeed, and are not attempted to be in any manner sold or exchanged during the passinge across the same, and proper regulations exhibitled to prevent the possibility of any frauds in this ratios the

No mak article is intended to render in a great degree the located on past of even party common to both, and thereby to premate a competency favorable to friendfinip and good neighborhood, it is a peed, that the respective governments will methodly premote this anneable entercourse, by coulding speedy and imported justice to be done, and necessary protection to be extended to all who may be concerned therein.

Art. 4. Whereas it is uncertain whether the river Millisppi extends so has to the northward as to be interfected by a line to be drawn due well from the lake of the woods in the manner attentioned in the treaty of peace between his Mijesty, and the United Scares, it is agreed, that measures shall be taken in concert with his Mijesty's government in America, and the government of the United States, for making a joint survey of the fail river from one depress of latitude below the fails of St. Anthony to the principal tource or fources of the fail river, and also of the parts adjacent thereto, and that if on the result of such survey, it should appear, that it and saver would not be interfeded by such a line as

is above mentioned, the two parties will thereupon proceed by amicable negociation to regulate the boundary line in that quarter, as well as all other points to be adjusted between the faid parties, according to justice and mutual convenience, and in conformity to the intent of the said treaty.

• Art. 5. Whereas doubts have arisen what river was truly intended under the name of the river St. Croix, mentioned in the said treaty of Peace, and forming a part of the boundary therein described, that question shall be referred to the final decision of Commissioners to be appointed in the following manner, viz.

One Commissioner shall be named by his Majesty and one by the President of the United States, by and with the advice and consent of the Senate thereof, and the said two commissioners shall agree on the choice of a third; or if they cannot so agree, they shall each propose one person, and, of the two names so proposed, one shall be drawn by lot in the presence of the two original commissioners. And the three commissioners so appointed, shall be sworn impartially to examine and decide the faid question according to such evidence as shall respectively be laid before them on the part of the British government and of the United States. The faid commissioners shall meet at Halifax and shall have power to adjourn to such other place or places as they shall think fit. They shall have power to appoint a secretary, and to employ such surveyors or other persons as they shall judge necessary. The said commissioners shall by a declaration under their hands and feals decide what river is the river St. Croix intended by the treaty. The faid declaration shall contain a description of the said river, and shall particularise the latitude and longitude of its mouth and its fource. Duplicates of this declaration and of the statements of their accounts and of the journal of their proceeding shall be delivered by them to the agent of his Majesty and to the agent of the United States, who may be respectively appointed and authorised to manage the business on behalf of the respective governments. And both parties agree to consider such decision as final and conclufive, so that the same shall never thereafter be called into question, or made the subject of dispute or difference between them.

Art. 6. Whereas it is alledged by divers British merchants and others his Majesty's subjects, that debts to a considerable amount, which were bona side contracted before the peace, still remaining owing to them by citizens or inhabitants of the United States, and that by the operation of various lawful impediments since the peace, not only the full recovery of the said

debts has been delayed, but also the value and security thereof have been, in teveral inflances impaired and leffened, to that by the ordinary courte of judicial proceedings, the British creditors cannot now obtain, and aftuilty have and receive full and adequate compensation for the losses and damages which they have thereby inftained: It is agreed, that in all inch cases where full compensation for such soiles and damages cannot for whatever realen be actually obtained, had and received by the faid creditors in the ordinary course of justice, the United States will make full and complete compensation for the same to the faid crediters: but it is diffinitly understood, that this provision is to extend to fuch loffes only as have been occasioned by the lawful impediments aforefaid, and is not to extend to loss occasioned by such intolvency of the debtors, or other causes as would equally have operated to produce such loss, if the faid impediments had not existed, nor to such losses or damages as have been occasioned by the manifest delay or negligence, or wilful omtilion of the claimant,

For the purpole of alcertaining the amount of any fuch losses and damages, tive commissioners thall be appointed, and authorised to meet and act in manner following, viz. Two of them shall be appointed by his Majesty, two of them by the Piesident of tie United States, by and with the advice and confert of the &nate thereof, and the fifth by the uninimous voice of the other tour; and if they should not agree in such choice, then the commillioners named by the two parties shall respectively propole one perion, and of the two names fo propoted, one shall be drawn by let in the prefence of the four or ginal commissioners. Wern the five commilteners thus appointed thall first meet, they had before they proceed to act respectively take the followmy can or affirmation, in the prefence of each other, which outh or affirmation being to taken, and duly attested, shall cutaica on the receive of their proceedings, viz. I. A. B. of the commiltoners appointed in pursuance of the fixth ar # or the treaty of ame, commerce, and navigation between Britannic Mojetty, and the United States of America, do iole ly inverse or attention that I will honefully, dilegently, impartize and carefully examine, according to judice and equity, deall mean companitions under the industricle fhell be preferred the old commissioners, and that I will forbear to act as a comemoner many case in which I may be perionally interested

Three of the laid commissioners shall constitute a board, flia i have power to no any act appertaining to the faid commission, provided that one of the commissioners named on

fide, and the fifth commissioner shall be present, and all decifions shall be made by the majority of the voices of the commissioners then present; eighteen months from the day on which the said commissioners shall form a board, and be ready to proteed to business, are assigned for receiving complaints, and applications; but they are nevertheless authorised in any particular cases in which it shall appear to them to be reasonable and just, to extend the said term of eighteen months for any term not exceeding six months, after the expiration thereof. The said commissioners shall sirst meet at Philadelphia, but they shall have power to adjourn from place to place as they shall see cause.

The said commissioners in examining the complaints and applications so preferred to them, are empowered and required, in pursuance of the true intent and meaning of this article, to take into their consideration all claims, whether of principal and interest, or balances of principal and interest, and to determine the same respectively according to the merits of the several cases, due regard being had to all the circumstances thereof, and as equity and justice shall appear to them to require. And the said commissioners shall have power to examine all such persons as shall come before them on oath or assimation or books, or papers, or copies, or extracts thereof, every such deposition, book, or paper, or extract being duly authenticated, either according to the legal forms now respectively existing in the two countries, or in such other manner as the said commissioners shall see cause to require or allow.

The award of the said commissioners or of any three of them as aforesaid, shall in all cases be final and conclusive, both as to the justice of the claim, and to the amount of the sum to be paid to the creditor or claimant: and the United States undertake to cause the sum so awarded to be paid in specie to such creditor or claimant with deduction; and at such time or times, and at such place or places as shall be awarded by the said commissioners; and on condition of such releases or assignments to be given by the creditor of claimant, as by the said commissioners may be directed; provided always, that no such payment shall be fixed by the said commissioners to take place sooner than twelve months from the day of the exchange of the ratifications of this treaty.

Art. 7. Whereas complaints have been made by divers merchants and other, citizens of the United States, that during the course of the war in which his Majesty is now engaged, they have sustained considerable losses and damage, by reason

of irregular or illegal captures or condemnations of their vel, fels and other property under colour of authority or commiffions from his Majeffy, and that from various circumftances belonging to the faid cales, adequate compensation for the losses and damages to sustained cannot now be actually obtained had and received by the or inary course of judicial proceedings: it it agreed, that in all such cases were adequate compensation cannot, for whatever reason, be now actually obtained, had and received by taid merchants and others in the ordinary course of justice, full and complete compensation for the same will be made by the British government to the said complainants. But it is distinctly understood that this provision is not to extend to such losses or damages as have been occasioned by the manifest delay or negligence, or wilful omistion of the claimants.

That for the purpole of afcertaing the amount of any fuch I files and damages, five commissioners shall be appointed and authorised to act in London, exactly in the manner directed with respect to those mentioned in the preceding article, and after Laying taken the same oath or affirmation (mutaris mutardis) the time term of eighteen months is alto affigued for the reception of claims, and they are in the manner authorited to extend the fame in particular cases. They shall receive testimony, books, papers and evidence in the time latitude, and exercise the like aftererion and powers respecting that subject; and shall decide the claims in question according to the ments of the feveral cars, and to justice, equity, and the laws of nations. The award of the commissioners, or any such three of them as aforelaid, finall, in all car's be anal and conclusive, both as to the justice of the claim, and the amount of the fum to be paid to the claimant; and his Britaniac M jeffy undertakes to cause the same to be paid to toch claiment in specie, without any deduction, at fuch place or places, and at fuch time or times as shall be awarded by the laid count ifficiers, and on condition of fuch releafes or alharm no to be given by the claimants, as by the faid commisfioners in ty be directed.

And whereas certain merchants and others his Mijeffy's fubj elsectiques that in the ceurte of the war they have fullained lots and diringe by reason of the capture of the veffels and merchandide taken within the limits and juridiction of the States, and brought into the peris of the face, or taken by veffels originally aimed in ports of the faid States.

It is agreed that in all fuch cases where reflictation fluid not have been made agreeably to the tenor of the letter from Mr.

Jefferson to Mr. Hammond, dated at Philadelphia, Sept. 5, 1793, a copy of which is annexed to this treaty; the complaints of the parties shall be and hereby are referred to the commissioners to be appointed by virtue of this article, who are hereby authorised and required to proceed in the like manner relative to these as to the other cases committed to them; and the United States undertake to pay to the complainants or claimants in specie, without deduction, the amount of such sums as shall be awarded to them respectively by the faid commissioners, and at the times and places which in such awards shall be specified; and on conditions of such releases or assignments to be given by the claimants as in the said award may be directed; and it is further agreed that not only the now existing cases of both descriptions but also all such as shall exist at the time of exchanging the ratifications of this treaty, shall be considered within the provisions, intent and meaning of this article.

Art. 8. It is further agreed, that the commissioners mentioned in the two preceding articles shall be respectively paid in such manner as shall be agreed between the two parties; such agreement being to be settled at the time of the exchange of the ratisfication of this treaty. And all other expences attending the faid commissions shall be defrayed jointly by the two parties, the same being previously ascertained and allowed by the majority of the commissioners. And in the case of death, sickness or necessary absence, the place of every such commissioner respectively shall be supplied in the same manner as such commissioner was appointed, and the new commissioner shall take the same teach or affirmation and do the same duties.

Art, 9. It is agreed that British subjects who now hold lands in the territories of the United States, and American citizens who now hold lands in the dominions of his Majesty shall continue to hold them according to the nature and tenure of their respective states and titles therein; and may grant, fell, or devise the same to whom they please, in like manner as if they were natives; and that neither they nor their heirs or assigns shall so far as may respect the said lands and the legal remedies incident thereto, be regarded as aliens.

Are. 10. Neither the debts due from individuals of the one aution, to individuals of the other, nor theres nor monies which they may have in the public funds, or in the public or private banks shall ever in any event of war or national differences be sequestered or conficated, it being unjust and impolitic that elebts and engagements contrasted and made by individuals have

ing confidence in each other, and in their respective governments should ever be destroyed or impaired by national authority on account of national differences and discontents.

Art, 11. It is agreed between his Majesty and the United States of America, that there shall be a reciprocal and entirely perfect liberty of navigation and commerce between their respective people, in the manner, under the limitations and on the conditions specified in the following articles.

Art. 12, His Mejesty consents that it shall and may be lawful during the time herein after limited for the citizens of the United States to carry to any of his Majesty's islands and ports in the West-Indies from the United States, in their own wisfels, not being above the burthen of seventy tons, any goods or merchands being of the growth, manufacture or produce of the faid States, which it is or may be lawful to carry to the tail islands or ports from the said States in British vessels; and that the tail American vessels shall be subject there to no other or ligher tonninge duties or charges than shall be payable by British vessels in the ports of the United States; and that the rangues of the said American vessels shall be subject there to no erion or higher duties or charges than shall be payable on the light articles if imported there from the said States in British vessels.

And his Maj sty also conferts that it shall be Inwful for the limit American currents to purchase, load and carry away in their said veolets to the United States from the said islands and parts all rach articles being of the growth, manufacture a produce of the field islands as may now by law be carried for a simple to the field States in British vessels and tubject only to the colors and charges on exportation, to which British to sels and their engages are or shall be subject in similar that and mitters.

* CONDITIONAL RABIFICATION, on the part of the United

State and state a Jane 24, 1745

Recommended to the Prefident of the Prefi

A. I Co State operational to the President to proceed without delign to further a cool one greateness with his Majorly on the subject of the field trate and in the countries with those in qualities.

Provided always that the said American vessels do carry and and their cargoes in the United States only, it being expressly igreed and declared that during the continuance of this article, the United States will prohibit and restrain the carrying any molasses, sugar, coffee, cocoa or cotton in American vessels, either from his Majesty's islands or from the United States to any part of the world except the United States, reasonable sea Rores excepted. Provided also, that it shall and may be lawful, during the same period, for British vessels to import from the faid islands into the United States, and to export from the United States to the faid islands, all articles whatever being of the growth, produce or manufacture of the faid islands, or of the United States respectively, which now may, by the laws of the said States, be so imported and exported. And that the cargoes of the said British vessels shall be subject to no other or higher duties or charges, than shall be payable on the ame articles, if so imported or exported in American vessels.

It is agreed that this article and every matter and thing therein contained shall continue to be in force during the continuance of the war, in which his Majesty is now engaged; and also for two years from and after the day of the signature of the preliminary or other articles of peace by which the same may be terminated.

And it is further agreed, that at the expiration of the said term, the two contracting parties will endeavour further to regulate their commerce in this respect, according to the situation in which his Majesty may then find himself with respect to the West-Indies, and with a view to such arrangements as may best conduce to the mutual advantage and extension of commerce. And the said parties will them also renew their discussions, and endeavour to agree, whether in any and what cases, neural vessels shall protect enemy's property; and in what cases provisions and other articles, not generally contraband, may become such. But in the mean time their conduct towards each other in these respects, shall be regulated by the articles herein after inserted on those subjects.

Art. 13. His Mejelty confents that the vessels belonging to the citizens of the United States of America, shall be admitted and hospitably received in all the sea posts and harbours of the British territories in the East Indies. And that the citizens of the said United States may freely carry on a trade between the said territories and the said United States, in all articles, of which the importation or exportation respectively to or from the said territories, shall not entirely be prohibited. Provided

only that it shall not be lawful for them in any time of wir between the British government and any other power or flate whatever, to export from the faid territories, without the fpecial permission of the British government there, any military flores or naval flores or rice. The citizens of the United States shall pay for their vessels when admitted into the said ports no other or higher tonnage duty than shall be payable on British vessels when admitted into the ports of the United States. And they shall pay no other or higher duties or charges en the importation or exportation of the cargoes of the said veilels, than shall be payable on the same articles when inported or exported in British vessels. But it is expressly agreed, that the veilels of the United States shall not carry any of the articles exported by them from the laid British territories to my part or place except to some port or place in America, where the fame shall be unladen, and such regulations shall be adopted by both parties, as shall from time to time be found necessary to enforce the due and faithful observance of this stipulation. It is also understood that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any pot of the coafting trade of the faid British tertot eres; but veilels going with their original cargoes, or part thereof, from one port of discharge to another are not to be confidered as carrying on the coasting trade. Neither is this article to be conflituted to allow the citizens of the faid States to feetle or refide within the faid territories, or to go into the interior parts thereof, without the permission of the British government established there; and if any transgression should be attempted against the regulations of the British govinnient in this respect, the observance of the same shall and may be enforced against the citizens of America in the tame is nier as against British subjects or others transgressing the force rule. And the citizens of the United States where ever ther arrive in any port or harbor in the faid territories, or if they thould be permitted in manner aforelaid, to go to any cher place it and it always be subject to the laws, govern-ment and first the or or what return established in frech harber, p(t) or p ace, according as the five may be to the cuizens or the U but because may also much for ration, ment at the minuted on Macro, out subject in adaptively to men regulathere is the Bestile overament may high time to time chabish Acre.

Act, sp. Chromodell we between all the dominions of his Mojelly in the permitted permitting of the United States? reciprocal and the first and the second of the Called States?

cople and inhabitants of the two countries respectively shall are liberty freely and securely and without hindrance and polestation to come with their ships and cargoes to the lands, countries, cities, ports, places and rivers within the dominions and territories aforesaid, to enter into the same, to resort there and to remain and reside there, without any limitation of time; and also to hire and possess houses and warehouses for the purposes of their commerce, and generally the merchants and traiters on each side shall enjoy the most complete protection and ecurity for their commerce; but subject always as to what respects this article to the laws and statutes of the two countries respectively.

Art. 15. It is agreed that no other or higher duties shall be paid by the ships or merchandise of the one party in the ports of the other, than such as are paid by the like vessels or merchandise of all other nations. Nor shall any other or higher duty be imposed in one country on the importation of any articles the growth, produce or manufacture of the other than are or shall be payable on the importation of the like articles being of the growth, produce or manufacture of any other foreign country. Nor shall any prohibition be imposed on the exportation or importation of any articles to or from the territories of the two parties respectively, which shall not equally extend to all other nations.

But the British government reserves to itself the right of imposing on American vessels entering into the British ports in Europe a tonnage duty equal to that which shall be payable by British vessels in the ports of America; and also such duty as may be adequate to countervail the difference of duty now payable on the importation of European and Assatic goods when imported into the United States in British or in American vessels.

The two parties agree to treat for the more exact equalization of the duties on the respective navigation of their subjects and people in such manner as may be most beneficial to the two countries. The arrangements for this purpose shall be made at the same time with those mentioned at the conclusion of the 2th article of this treaty, and are to be considered as a part thereof. In the interval it is agreed, that the United States will not impose any new or additional tonnage duties on British vessels, nor increase the now substitting difference between the states payable on the importation of any article in British or in American vessels.

Art. 16. It shall be free for the two contracting parties, refpeltively to appoint confuls for the protection of trade, to telide 476

in the domini as and territories aforefaid, and the faid confuls shall enjoy the selection and rights which belong to them by reason of the function. But before any consul shall all as so such that in the usual forms approved and admitted by the p whom he is sent; and it is hereby declared to he lawful proper, that in case of illegal or improper consult towards the laws or government, a consult may either be purely ed according to law, if the laws will reach the case or be dismissed, or ever a sent back, the offended government affiguing to the other the reasons for the same.

Either of the fuls tuch parties be to excepted.

Art, 17. It is a sale captured or deta my's property, or of cawhich are conto the nearest a conver

from the refidence of sonparty shall judge proper to

cases where vessels shall be n of having on board enee enemy any of the articles a faid vessel shall be brought art; and if any property of

an enemy should be found on board such vessel, that part only which belongs to the enemy shall be made prize, and the vessel shall be at liberty to proceed with the remainder without my impediment. And it is agreed, that all proper measures shall be taken to prevent delay, in deciding the cases of ships or cargoes so brought in for adjudication; and in the payment or recovery of any indemnification adjudged or agreed to be paid to the masters or owners of such ships.

Art. 18. In order to regulate what is in future to be deemed contraband of war, it is agreed, that under the faid denomination shall be comprised all arms and implements serving for the purpotes of war, by land or sea, such as cannon, muskets, mortars, petards, bombs, grenados, carcasses, faucisses, carriages for cannons, musket rests, bandoliers, gun powder, match, saltpetre, ball, pikes, swords, head pieces, cuitasses, halberts, lances, javelines, horse furniture, holsters, belts, and generally all other implements of war; as also timber for ship building, tar, or resin, copper in sheets, sails hemp and cordage, and generally whatever may serve directly to the equipment of vessels, unwrought iron and fir planks only excepted; and all the above articles are hereby declared to be just objects of confiscation, whenever they are attempted to be carried to an enemy.

And whereas the difficulty of agreeing on the precise cales in which alone provisions and other articles not generally contraband may be regarded as such, renders it expedient to provide against the inconveniencies and misunderstandings which might

thence arise: it is further agreed, that whenever any such articles so becoming contraband according to the existing laws of nations, shall for that reason be seized, the same shall not be conficated, but the owners thereof shall be speedily and completely indemnified; and the captors, or in their default the government under whose authority they ast, shall pay to the masters or owners of such vessel the full value of all articles, with a reasonable mercantile profit thereon, together with the freight, and also the demurrage incident to such detention.

And whereas it frequently happens, that vessels sail for a port or place belonging to any enemy, without knowing that the same is either besieged, blockaded or invested; it is agreed, that every vessel so circumstanced may be turned away from such port or place, but she shall not be detained nor her cargo, if not contraband, be consisted, unless after notice she shall again attempt to enter; but she shall be permitted to go to any port or place she may think proper: nor shall any vessel or goods of either party, that may have entered into such port or place, before the same was besieged, blockaded or invested by the other, and be sound therein after the reduction or surrender of such place, be liable to consistation, but shall be restored to the guners or proprietors thereof.

Art. 19. And that more abundant care be taken for the fesurity of the respective subjects and citizens of the contracting parties, and to prevent their suffering injuries by the men of war, or privateers of either party, all commanders of ships of war and privateers and all others the said subjects and citizens shall forbear to do any damage to those of the other party, or committing any outrage against them, and if they act to the contrary, they shall be punished, and shall also be bound in their persons and estates to make satisfaction and reparation for all damages, and the interest thereof, of whatever nature the said damages may be.

For this cause all commanders of privateers before they receive their commissions shall hereafter be obliged to give before a competent judge, sufficient security by at least two responsible sureties, who have no interest in the said privateer, each of whom, together with the said commander, shall be jointly and severally bound in the sum of sisteen hundred pounds sterling, or if such ships be provided with above one hundred and sitty seamen or soldiers, in the sum of three thousand pounds sterling, to satisfy all damages and injuries, which the said privateer or officers or men, or any of them may do or commit during their cruise, constrary to the tenor of this treaty, or to the laws and

instructions for regulating their conduct; and further that in all cates of aggressions the faid commissions shall be revoked and annuled.

It is also agreed, that whenever a judge of a court of admiralty of either of the parties, shall pronounce sentence against any vessel of goods or property belonging to the subjects or citizens of the other party a formal and duly authenticated copy of all the proceedings in the cause, and of the said sentence, shall if required be delivered to the commander of the said vessel, without the smallest delay, he paying all legal sees and demands for the same.

Att. 20. It is further agreed that both the faid controlling parties, shall not only refule to receive any pirates into any of their ports, havens, or towns, or permit any of their inhibitants to receive, pretect, harbour, conceal or affift them in any manner, but will bring to condign punishment all such inlatitants as shall be guilty of such acts or offences.

And all their ships with the goods or merchandises taken by them and brought into port of either of the said parties, shall be receded as far as they can be discovered, and shall be restored to the owners or the sactors or agents duly deputed and authorised in writing by them (proper evidence being first in the court of admiralty for proving the property) even in case such the standard have passed into other hands by tale, if it be present that the bayers knew or had good reason to believe, or support that they had been piratically taken.

Art. 21. It is likewise agreed, that the subjects and citizens of the two nations, shall not do any acts of hostility or violence against each other, nor accept commissions or instructions so to act from any foreign prince or state, enemies to the other party; nor shall the enemies of one of the parties be permitted to invice, or endeavour to enlist in the military service any of the stablests or citizens of the other party; and the laws against all state offences shall be punctually executed. And if any subject or citizen of the said parties respectively shall accept any for again commission, or letters of marque, for arming any vessely to be lawful for the said party to treat and punish the said subject or citizen, having such commission or letters of marque, as a perate.

Art. 22. It is expressly stipulated that neither of the said contracting parties will order or authorite any acts of reprilal against the other, on complaints of injuries or damages, until the said party shall find have represented to the other, a state-

COMMERCE AND NAVIGATION.

thereof, verified by competent proof and evidence, and inding justice and satisfaction, and the same shall either have refused or unreasonably delayed.

rt. 23. The ships of war of each of the contracting parties , at all times, be hospitably received in the ports of the r, their officers and crews paying due respect to the laws government of the country. The officers shall be treated that respect which is due to the commissions which they ; and if any infult should be offered to them by any of the bitants, all offenders in this respect shall be punished as irbers of the peace and amity between the two countries; his Majesty consents, that in case an American vessel, ld by stress of weather, danger from enemies or other mismes be reduced to the necessity of seeking shelter in any of Majesty's ports, into which such vessel could not in ordicases claim to be admitted, she shall, on manifesting that slity to the satisfaction of the government of the place, be itably received and permitted to refit and to purchase at market price such necessaries, as she may stand in need of, ormably to such orders and regulations as the government of place, having respect to circumstances of each case, shall cribe. She shall not be allowed to break bulk or unload cargo unless the same shall be bona fide necessary to her being ted. Nor shall be permitted to sell any part of her cargos is so much only as may be necessary to defray her expenses then not without the express permission of the governt of the place. Nor shallshe be obliged to pay any duties tever except only on such articles as she may be permitto fell for the purpose aforesaid.

rt. 24. It shall not be lawful for any foreign privateers being subjects or citizens of either of the said parties) who commissions from any other prince or state in enmity with er nation, to arm their ships in the ports of either of the parties, nor sell what they have taken, nor in any other ner to exchange the same; nor shall they be allowed to thase more provisions than shall be necessary for their going he nearest port of that prince or state from whom they obed their commission.

ers. 25. It shall be lawful for the ships of war and priers belonging to the said parties respectively, to carry thersoever they please the ships and goods taken from their mies, without being obliged to pay any see to the officers of admiralty, or to any judges whatever; nor shall the said tes when they arrive at, and enter the ports of the said.

parties be detained or feized, neither shall the searchess et ether officers of those places visit such prizes (except for the purpose of preventing the carrying of any part of the cargos thereof on shore in any manner contrary to the established laws of sevenue, navigation, or commerce) nor shall such officers take cognitance of the validity of tuch prizes; but they shall be at liberty to heift fail and depart as speedily as may be, and carry their faid prizes to the place mentioned in their commissions or patents, which the commanders of the faid thips of war of privateers thall be obliged to thew. No thelter or refuge hall be given in their ports to fuch as have made a prize upon the subjects or citizens of either of the faid parties; but if forced by stress of weather, or the danger of the sea, to enter therein, particular care shall be taken to hasten their departure, and to cause them to retire as soon as possible. Nothing in this treaty contained shall, however, be constituted or operate contrary to former and exitting public treaties with other fovereigns or states. But the two parties agree, that while they continue in amity neither of them will in future make any treaty that shall be inconfiftent with this or the preceding article.

Neither of the faid parties shall permit the ships or goods belonging to the subjects or citizens of the other to be taken within cannon shot of the coast, nor in any of the bays, ports, or rivers of their territories by ships of war, or others having commission from any Prince, Republic, or State whatever. But in case it should so happen, the party whose territorial rights shall thus have been violated, shall use his utmost endeavours to obtain from the effending party, full and ample satisfaction for the vessel or vessels to taken, whether the same be vessels of war or merchant vessels.

Art. 26. If at any time a rupture should take place (which God feelold) between his Majesty and the United States, the merchants and others of each of the two nations residing in the dominions of the other shall have the privilege of remaining and continuing their trade, so long as they behave peaceably and commit no offence against the laws; and in case their conduct should render them suspected and the respective governments should think proper to order them to remove, the term of twelve months from the publication of the order shall be allowed them for that purpose, to remove with their families, effects, and property, but this favor shall not be extended to those who shall not contrary to the citablished laws, and for greater certainty, it is declared that such rupture shall not be deemed to call while negociations for accommodating differences, shall

be depending, nor until the respective Ambassadors or Ministers, if such there shall be, shall be recalled or sent home on account of such differences, and not on account of personal misconduct according to the nature and degrees of which both parties retain their rights, either to request the recall, or immediately to send home the Ambassador or Minister of the other: and that without prejudice to their mutual friendship and good understanding.

Art. 27. It is further agreed that his Majesty and the United States on mutual requisitions, by them respectively, or by their respective Ministers or Officers authorised to make the same, will deliver up to justice all persons who being charged with murder or forgery, committed within the jurisdiction of either, shall seek an asylum within any of the countries of the other, provided that this shall only be done on such evidence of criminality as, according to the laws of the place, where the sugitive or person so charged shall be found, would justify his apprehension as detommitment for trial, if the offence had there been committed. The expence of such apprehension and delivery shall be borne and defrayed by those who make the requisition and receive the sugitive.

Art. 28. It is agreed, that the first ten articles of this Treaty shall be permanent, and that the subsequent articles, except the twelfth, shall be limited in their duration to twelve years, to be computed from the day on which the ratifications of this Treaty shall be exchanged, but subject to this condition -that whereas the faid twelfth article will expire by the limitation therein contained, at the end of two years from the figning the preliminary or other articles of peace which shall terminate the present war in which his Majesty is engaged, it is agreed, that proper measures shall by concert be taken for bringing the subject of that article into amicable treaty and discussion, so early before the expiration of the faid ter :, as that new arrangements on that head, may by that time be perseced and ready to take place. But if it should unsortunately happen, that his Majesty and the United States should not be able to agree on fuch new arrangements, in that cafe ill the articles of this treaty, except the first ten shall then teafe and expire together.

Lastly. This Treaty, when the same shall have been ratified by his Majesty and by the President of the United States, by and with the advice and consent of their Senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said States, and shall be by them respectively executed and observed with punctuality and the most

fincere regard to go d faith; and whereas it will be expedient in order the better to techtate intercourse and obviate dissipation, that other articles be proposed and added to this Treaty, which articles from want of time and other circumstances, cannot now be perfected—it is agreed, that the said parties will from tone to time, readily treat of and concerning such articles, and wall succeed endeavour to to form them, as that they may conduce to mutual convenience, and tend to promote mutual stands on a differential per and that the said articles, after having been dony tat fied, shall be added to, and make a part of this treaty. In fault, whereas, we the understand Ministers Plenipotentiary of his Migrity the King of Greet Britain and the United States of America, have signed this present Treaty, and have count to be assisted thereto the Seal of our arms.

LITWILN

11. UNITED STATES OF AMERICA, AND HIS IMPERIAL MAJESTA THE EMPEROR OF MOROCCO.

The Programme will south for profests feath come on ten ade knowle

WHIRDAS the United States of America in Congress Membered, by their communions bearing date the twelfth day of Mon, she chordened teven hundred and eighty-four, thought proper to continue John Adoms, Benjamin Franklin, and Thomas Jufferson, their ministers plenipotentiary, giving to them, on a majorate of thom, full powers to confer, treat and negociate with the ambufflidor, minister, or commissioner of his Majority the Emperor of Morocca, concerning a treaty of among and accounterest, to while and access propositions for

fuch treaty, and to conclude and fign the fame, transmitting it to the United States in Congress atlembled, for their final ratification; and by one other commission bearing date the eleventh day of March, one thousand seven hundred and eighty-live, did further empower the faid ministers plenipotentiary, or a majority of them, by writing under their hands and feals, to appoint such agent in the faid business as they might think proper, with authority under the directions and instructions of the faid ministers, to commence and profecute the faid negociations and conferences for the faid treaty, provided that the faid treaty should be signed by the faid minifters: And whereas we the faid John Adams and Thomas Jefferson, two of the said ministers plenipotentiary (the said Benjamin Franklin being ablent) by writing under the hand and feal of the faid John Adams at London, October the fifth, one thousand seven hundred and eighty-five, and of the hid Thomas Jefferson at Paris, October the eleventh of the same year, did appoint Thomas Barclay, agent in the bufiness aforefaid, giving him the powers therein, which by the faid fecond commission we were authorised to give, and the said Thomas Barclay in pursuance thereof, hath arranged articles for a treaty of amity and commerce between the United States of America, and his Majesty the Emperor of Morocco, which articles, written in the Arabic language, confirmed by his faid Majesty the Emperor of Morocco, and lealed with his royal leal, being translated into the language of the faid United States of America, together with the attestations thereto annexed, are in the following words, to wit,

Royal Seal.

In the Name of ALMIGHTY GOD.

THIS is a Treaty of Peace and Friendship established between ass and the United States of Americs, which is confirmed, and which we have ordered to be written in this book, and sealed with our royal seal, at our court of Morocco, on the twenty-fifth day of the blessed month of Shaban, in the year one thousand two hundred, trusting in God it will remain permanent.

Article I. We declare that both parties have agreed that this breaty, confifting of twenty-five articles, shall be inferted in this book, and delivered to the Honorable Thomas Barclay, the agent of the United States now at our court, with whose approbation is has been made, and who is duly authorised on their part to treat with us concerning all the matters contained therein.

Art, II. If either of the parties shall be at war with any metion whatever, the other party shall not take a commission from the enemy, nor fight under their colours.

Art. 111. If either of the parties shall be at war with any nation whatever, and take a prize belonging to that nation, and there mail be found on board subjects or effects belonging to either of the parties, the subjects shall be fet at liberty, and the critics returned to the owners. And if any goods belonging to any nation, with whom either of the parties shall be at war, shall be loaded on vellels belonging to the other party, they shall passive any unimolessed without any attempt being made to take or dictum them.

Art. IV. A figural or pass shall be given to all vessels belonging to both parties, by which they are to be known when they meet at lea; and if the commander of a ship of war of either party shall have other ships under his convoy, the declaration of the commander shall alone be sufficient to exempt any of them from examination.

Art. V. If either of the parties shall be at war, and shall at et a vehicl at sea belonging to the other, it is agreed, that so contamination is to be made, it shall be done by tending a best vehicles or these men only; and if any gun shall be fired, and a party of new warrout reason, the offending party shall make good and changes.

rest. V1. If any Moor shall bring citizens of the United to the, or their enects, to his Migrity, the citizens shall innocled by the let at liberty, and the effects reflected; and in like mooner, if any Moor, not a subject of these dominions, shall and eight read any of the citizens of America, or their effects, and in common and cow of the ports of his Migrity, they shall be min the city release, as they will then be confidered as under him slipe by a present in a

And V.I. If any v. Rel of eather party shall put into a porter and eather, and each each or nor providing or other topplies, the realistic formified, without any interruption or mobilities.

Art. VIII. If any veffel of the United States field meet with a solution of fee, and put into one of our ports to repair, the first relatible type to lend and reload her course, without paying any duty whatever.

min. The It any veifel of the United States fluil be cast on the energy part of our counts, the shall remain it the allgolides in the owners, and no one than attempt going near her without an approbation, as the is then conflicted particularly universe.

protection; and if any vessel of the United States shall be forced to put into our ports by stress of weather, or otherwise, she shall not be compelled to land her cargo, but shall remain in tranquility until the commander shall think proper to proceed on his voyage.

Art. X. If any vessel of either of the parties shall have an engagement with a vessel belonging to any of the Christian powers within gun shot of the forts of the other, the vessel so engaged shall be defended and protested as much as possible until she is in safety; and if any American vessel shall be cast on thore on the coast of Wadnoon, or any coast thereabout, the people belonging to her shall be protested and assisted, until, by the help of God, they shall be sent to their country.

Art. XI. If we shall be at war with any Christian power, and any of our vessels sail from the ports of the United States, no vessel belonging to the enemy shall follow until twenty-four hours after the departure of our vessels; and the same regulation shall be observed towards the American vessels sailing from our ports, be their enemies Moors or Christians.

Art. XII. If any ship of war belonging to the United States shall put into any of our ports, she shall not be examined on any pretence whatever, even though she should have fugitive slaves on board, nor shall the governor or commander of the place sompel them to be brought on shore on any pretext, nor require any payment for them.

Art. XIII. If a ship of war of either party shall put into a port of the other and salute, it shall be returned from the fort with an equal number of guns, not with more or less.

Art. XIV. The commerce with the United States shall be on the same sooting as is the commerce with Spain, or as that with the most savoured nation for the time being; and their citizens shall be respected and esteemed, and have full liberty to pass and repass our country and seaports whenever they please without interruption.

Art. XV. Merchants of both countries shall employ only such interpreters, and such other persons to assist them in their business, as they shall think proper. No commander of a vessel shall transport his cargo on board another vessel; he shall not be detained in port longer than he may think proper; and all persons employed in loading or unloading goods, or in any other labour whatever, shall be paid at the customary rates, not more and not less.

Art. XVI. In case of a war between the parties, the prisoners are not to be make slaves, but to be exchanged one for another,

captain for captain, efficer for officer, and one private man for another t and if there shall prove a deficiency on either fide, it final, be made up by the payment of one hundred Mexican dollar for a chiperion wanting. And it is agreed that all prifoners to here exchanged within twelve months from the time of their body token, and that this exchange may be effected by a merchant r any other person authorized by either of the parties.

2. MVII. Merchants shall not be compelled to buy or sell and a self-goods but such as they shall think proper; and may have a did shall torts of merchandize but such as are prohibited to the other Christian nations.

At. AVIII. All goods thall be weighed and examined before they are fent on board, and to avoid all detention of veffels, no expansion fitall afterwards be made, unless it shall first be proved that contraband goods have been fent on board, in which case the persons who took the contraband goods on board, shall be provided according to the usage and custom of the country, and no other person whatever shall be injured, nor shall the ship or ergo incur any penalty or damage whatever.

Act. MIX. No veffel shall be detained in port on any pretion whatever, not be obliged to take on board any article versual the conferr of the commander, who shall be at full the result of any goods he takes on the state.

101. XX. If any of the crizens of the United States, or any planers under their protection, shall have any disputes with each other, the contol shall decide between the parties, and whenever the contol shall require any aid or affishance from our government, to enderce his decidens, it shall be immediately granted the rim.

A. N. N. If a cirizen of the United States should kill or wound a continue of the Control of a Moor shall kill or wound a continue of the United States, the law of the country shall take places, and equal justice shall be condered, the control assisting at the trial; and if any delinquent shall make his eleape, the control shall not be answerable for him in any minner whatever.

Art. KXII. If an American citizen fluid de in our country, and no will fluid appear, the count fluid take policition of his effects, and if there final be no countd, the effects fluid be depolited in the hards of fome perion worthy of trust, until the party fould appear who has a right to demand them; but if the hoir to the perion deceated be prefent, the property thail be delivered to him without interregular, and if a will shall appear,

the property shall descend agreeable to that will as soon as the consul shall declare the validity thereof.

Art. XXIII. The confuls of the United States of America, shall refide in any sea-port of our dominions that they shall think proper; and they shall be respected, and enjoy all the privileges which the consuls of any other nation enjoy; and if any of the citizens of the United States shall contract any debts or engagements, the consuls shall not be in any manner accountable for them, unless he shall have given a promise in writing for the payment or sulfilling thereof, without which promise in writing, no application to him for any redress shall be made.

Art. XXIV. If any differences shall arise by either party infringing on any of the articles of this treaty, peace and harmony shall remain netwithstanding, in the fullest force, until a friendly application shall be made for an arrangement, and until that application shall be rejected, no appeal shall be made to arms. And if a war shall break out between the parties, nine months shall be granted to all the subjects of both parties, to dispose of their effects and retire with their property. And it is further declared, that whatever indulgencies in trade or otherwise, shall be granted to any of the Christian powers, the citizens of the United States shall be equally entitled to them.

Art. XXV. This treaty shall continue in full force, with the help of God, for fifty years.

We have delivered this book into the hands of the before mentioned Thomas Barclay, on the first day of the blessed month of Ramadan, in the year one thousand two hundred.

I certify that the annexed is a true copy of the trunflation made by Ifaac Cordoza Nunez, interpreter at Morocco, of the treaty letween the Emperor of Morocco, and the United States of America.

THOMAS BARCLAY.

ADDITIONAL ARTICLE.

CRACE TO THE ONLY GOD.

I, THE under-written, the servant of God, Taher Ben Abdelkack Fennish, do certify, that his Imperial Majesty, my moder, (whom God preserve) having concluded a treaty of peace and commerce with the United States of America, his ordered me, the better to compleat it, and in addition of the tenth and

TREATY OF PEACE AND FRIENDSHIP.

488 ele of the treaty, to declare, " That if any veffel belonging to United States, shall be in any of the ports of his Majesty's sinions, or within gun-shot of his forts, he shall be protested nuch as possible, and no vessel whatever, belonging either to orish or Christian powers, with whom the United States may be at war, thall be permitted to follow or engage her, as we now deem the citizens of America our good friends."

And, in obedience to his Majelty's commands, I certify this declaration, by putting my hand and feal to it, on the eighteenth day of Ramadan,* in the year one thouland two hundred.

The fervant of the King, my mafter, whom God preferve, TAHER BEN ABBELKACE FERNISH.

I do certify that the above is a true copy of the translation made at Morocco, by Ifaac Cordota Nunez, interpreter, of a declaration made and figned by Sidi Hage Taher Fennifa, in addition to the treaty between the Emperor of Morocco, and the United States of America, which declaration the faid Taher Fennish made by the exprefs directions of his Majefty.

THOMAS BARCLAY.

Now anow ye, That we the faid John Adams and Thomse Jefferson, ministers plenipotentiary aforesaid, do approve and conclude the faid treaty, and every article and clause themin contained, referving the same nevertheless to the United States in Congress assembled for their final ratification.

In testimony whereof, we have figured the same with our momes of feals, at the places of our respective residence, and at the expressed under our fignatures respectively.

JOHN ADAMS.

TREATY

BETWEEN

THE UNITED STATES AND HIS CATHOLIC MAJESTY.

HIS Catholic Majesty and the United States of America, desiring to consolidate, on a permanent basis, the friendship and good correspondence which happily prevails between the two parties, have determined to establish by a Convention, several points, the settlement whereof will be productive of general advantage and reciprocal utility to both nations.

With this intention his Catholic Majesty has appointed the most excellent Lord Don Manuel de Goday, and Alvarez de Faria, Rois, Sanchez, Zazoza, Prince de Paz, Duke de la Alcudia; Lord of the Roto de Roma, and of the state of Albala, grandee of Spain of the first class, perpetual Regedor of the city of Santiajo, Knight of the illustrious order of the Golden Fleece, and Great Cross of the Royal and distinguished Spanish order of Charles III. Commander of Valencia, del Ventole, Rivera, and Acenchal in that of Santiajo, Knight and Great Cross of the religious order of St. John, Counseller of State, First Secretary of State, and Dispatch Secretary to the Queen. Superintendant General of the Polls and Highways, Protector of the Royal Academy of the Noble Arts, and of the Royal Societies of Natural History, Botany, Chemistry and Astronomy, Gentleman of the Bed Chamber in employment, Captain General of his armies, Inspector and Major of the Reyal Corps of Body Guards, &c. &c. &c. And the Prefident of the United States, with the advice and confent of their Senate, has appointed Thomas Pinckney, a citizen of the United States, and their Envoy Extraordinary to his Catholic Majesty. And the faid Plenipotentiaries have agreed upon and concluded the following Articles.

Art. I. There shall be a firm and inviolable peace and since of friendship between his Catholic Majesty, his successors and subjects, and the United States, and their citizens, without exception of persons or places.

Art. II. To prevent all dispute on the subject of the boundaries which separate the territories of the two high contricting parties, it is hereby declared and agreed as follows, to wit:

The f boundary of the United States which divides from the Spanish colonies of East and Welltheir be defiguated by a line beginning on the river Florid Mississippi at the northernmost part of the thirty-first deof latitude north of the equator, which from thence shall be drawn due east to the middle of the river Apalachicola or Carabfuche, thence along the middle thereof to its junction with the Flint, then straight to the head of St. Mary's nver, and thence down the middle thereof to the Atlantic Ocean, ed, that if there should be any troops, garrifons, or fett the territory of the other according to boundaries, they thall be ithin the term of fix months withdrawn from The state of after the ratification this tr or fooner, if it be possible; and that they fhale ne n ike with them all the goods and effects which Art. III. In ore preceding article into effect,

one commissioner : r shall be appointed by each of the contracting parties, who inell meet at the Natches, on the left fide of the river Mishinppi, before the expiration of fix months from the ratification of this Convention, and they shall proceed to run and make this boundary according to the stipulations of the said article. They shall make plats and keep journals of their proceedings, which shall be considered as part of this Convention, and shall have the same force as if this were inferted therein. And if on any account it should be found necessary that the said commissioners and surveyors should be accompanied by guards, they shall be furnished in equal proportion by the commanding officer of his Majesty's troops in the two Floridas, and the commanding officer of the troops of the United States in the fouth-western territory, who shall all by common confent and amicably, as well with respect to this point, as to the furnishing provisions and instruments, and making every other arrangement which may be necessary of ulcful for the execution of this article.

Art. IV. It is likewife agreed that the western boundary of the United States, which separates them from the Spanish colony of Loudhana, is in the middle of the channel or bed of the river Postiollippi, from the northern boundary of the sid States, to the completion of the thirty first degree of latitude north of the equator. And his Catholic Majesty has likewise agreed, that the management of the said river, from its source to the octan, stall be free only to his subjects and the citizens

of the United States, unless he should extend this privilege to the subjects of other powers by a special convention.

Art. V. The two high contracting parties shall, by all means in their power, maintain peace and harmony among the several Indian nations who inhabit the country adjacent to the lines and rivers which, by the preceding article, form the boundaries of the two Floridas; and the better to attain this effect, both parties oblige themselves expressly to restrain, by source, all hostilities on the part of the Indian nations living within their boundary; so that Spain will not suffer their Indians, inhabiting their territory, nor will the United States permit then last mentioned Indians to commence hostilities against his Catholic Majesty, or his Indians, in any manner whatsoever.

And whereas feveral treaties of friendship exist between the two contracting parties and the said nations of Indians, it is hereby agreed, that in future, no treaty of alliance, or other whatsoever, (except treaties of peace) shall be made by either party with the Indians living within the boundary of the other; but both parties will endeavour to make the advantages of the Indian trade common and mutually beneficial to their respective subjects and citizens, observing in all things the most complete seciprocity, so that both parties may obtain the advantages arising from a good understanding with the said nations, without being subject to the expence which they have hitherto occasioned.

Art. VI. Each party shall endeavour, by all the means in their power, to protect and defend all vessels and other estels belonging to the citizens or subjects of the other, which should be within the extent of their jurisdiction, by sea or by land, and shall use all their efforts to recover, and cause to be recovered to the right owners, their vessels and essels which may have been taken from them within the extent of their said jurisdiction, whether they are at war or not with the objects who have taken possession of the said essels.

Art. VII. And it is arrest that the biggs each of the isin controlling price that the biggs of the state of the controlling purpose whatlover. And in the purpose whatlover, and in the careful for depth controlled or directly the lane that the cine; the lane that authority of law proceedings usual in

beth parties shall be allowed such advocates, solicitors, notaries, agents, and factors, as they judge proper, in all their affairs, and in all their trials at law, in which they may be concerned before the tribinal of the other party, and such agents shall have free access, to be present at the proceedings in such causes, and at the taking of examinations and evidence which may be exhibited in the said trials.

Arr. VIII. In case the subjects and inhabitants of either party, with their shipping, whether public and of war, or private and of merchants, be forced, through stress of weather, pursuit of pirates or enemies, or any other urgent necessity for taking shelter and harbour, to retreat and enter into any of the rivers, bays, roads, or ports belonging to the other party, they shall be received and treated with all humanity, and enjoy all savour, protection, and help, and they shall be permitted to provide themselves, at reasonable rates, with victuals, and all things needful for the sustenance of their persons, or reparation of their ships, and protecution of their voyage; and they shall no ways be hindered from returning out of the said ports or roads, but may remove and depart when and whither they please, without any let or hindrance.

Art. IX. All ships and merchandize of whatever nature thever, which shall be rescued out of the hands of any pirates or robbers on the high seas, shall be brought into some port of either state, and shall be delivered to the custody of the officers of that port, in order to be taken care of, and restored to the true proprietor, as soon as due and sufficient proof shall be made concerning the property thereof.

Ait. X. When any vessel of either party shall be wrecked, foundered, or otherwise damaged on the coasts, or within the dominion of the other, their respective subjects and citizens shall receive, as well for themselves as for their vessels and effects, the same assistance which would be due to the inhabitants of the country where the damage happens, and shall pay the same charges and duties only as the said inhabitants would be subject to pay is a like case; and if the operation of repairs would require that the whole, or any part of the cargo be unliden, they shall pay no duties, charges, or sees on the part which shall relade and carry away.

Art. NI. The citizens and fubjects of each party shall have power to dispose of their personal goods within the jurisdiction of the other, by testaments, donations, or otherwise, and their representatives, being subjects or citizens of the other party, shall succeed to their said personal goods, whether by testament

or ab inteffato, and they may take possession thereof, either by themselves or others afting for them, and dispose of the same at their will, paying fale duties only, as the inhabitants of the country wherein the same goods are, or shall be subject to pay in like cases. And in case of the absence of the representative, fuch care shall be taken of the faid goods, as of a native in like cale, until the lawful owner may take measures for receiving them: and if questions should arise among several -claimants to which of them the goods belong, the fame shall be decided by the laws and judges of the land wherein the faid goods are. And where, on the death of any person holding real estate within the territories of the one party, fuch real effate would, by the law of the land, descend on a citizen or subject of the other. were he not disqualified by being an alien, such subject shall be allowed a reasonable time to sell the same, and to withdraw the proceeds, without moleflation, and exempt from all right of letention on the part of the government of the respective States.

Art. XII. The merchant ships of either party which shall be making into ports, or into a port belonging to the enemy of the other party, and concerning whose voyage, and the species of goods on board her, there shall be just grounds of suspicion, shall be obliged to exhibit, as well upon the high seas as in the ports and havens, not only her passport, but likewise certificates, expressly shewing that her goods are not of the number of those which have been prohibited as contraband.

Art. XIII. For the better promoting of commerce on both fides, it is agreed, that if a war shall break out between the two said nations, one year after the proclamation of war shall be allowed to the merchants in the cities and towns where they shall live, for collecting and transporting their goods and merchandizes, and if any thing be taken from them, or any injury done them within that term, by either party, or the people or subjects of either, full satisfaction shall be made by the government.

Art. XIV. No subject of his Catholic Majesty shall apply for, or take any commission or letters of marque, for arming any ship or ships to act as privateers against the United States, or against the citizens, people, or inhabitants of the said United States, or against the property of any of the inhabitants of any of them, from any Prince or State with which the United States shall be at war. Nor shall any citizen, subject, or inhabitant of the said United States, apply for, or take any commission or letters of marque, for arming any ship or ships, to act

as prive against the subjects of his Catholic Majesty, or the proper my of them, from any Prince or State with which the said that be at war. And if any person of either estion shall be such commission or letters of marque, he shall be punished as a pirate.

Art, XV. It shall be lawful for all and fingular the subjects of his Catholic Majesty, and the citizens, people, and inhabitants of the United States, to fail with their fhips, with all manner of liberty and security, no distinction being made who istors of the merchandizes laden therein, from any are the p v are, or hereafter shall be port to th or the United States, It at comity shall be like ects and inhabitants aforefaid, to fail with lizes afore-mentioned, and to trade with the .. arity, from the places, ports, s of both or either party, or havens of thoi. ce what foever, not only from without any oppol the places of the enemy arore-me ioned to neutral places, but also from one place belonging to an enemy, to another place belonging to an enemy, whether they be under the jurisdiction of the same Prince, or under several; and it is hereby stipulated that free ships shall also give freedom to goods, and that every thing shall be deemed free and exempt which shall be found on board the ships belonging to the subjects of either of the contracting parties, although the whole lading, or any part thereof, should appertain to the enemy of either; contraband goods being always excepted. It is also agreed, that the same liberty be granted to persons who are on board a free ship, so that although they be enemics to either party, they shall not be made prisoners, or taken out of that free ship, unless they are soldiers, and in actual service of the enemies.

Art. XVI. This liberty of navigation and commerce shall extend to all kinds of merchandizes, excepting those only which are distinguished by the name of contraband: and under this name of contraband, or prohibited goods, shall be comprehended arms, great guns, bombs, with their suses, and the other things belonging to them, cannon balls, gunpowder, match, pikes, swords, lances, spears, halberts, mortars, petards, grenades, salt-petre, muskets, musket balls, bucklers, helmets, breast plates, coats of mail, and the like kinds of arms, proper for arming soldiers, musket rests, belts, horses with their furniture, and all other warlike instruments whatever. These merchandizes which follow shall not be recknowed among contraband or prohibited goods, that is to say, all sorts of cloths, and all

other manufactures weven of any wool, flax, filk, cotton, or any other materials whatever, all kinds of wearing apparel, together with all species whereof they are used to be made; gold and filver, as well coined as uncoined, tin, iron, latten, brafs, copper, coals; as also wheat, barley, and oats, and any other kind corn and pulfe; tobacco, and likewife all manner of fpices, falted and imosked fieth, falted fifth, cheefe and butter, beer, oils, wines, fugar, and all forts of falt; and, in general, all provisions which ferve for the fuftenance of life : furthermore, all kinds of cotton, hemp, flax, tar, pitch, ropes, cables, fails, fail cloths, anchors, or any part of anchors, also ship masts, planks, and wood of all kinds, and all things proper either for building or repairing thips, and all other goods whatever which have not been worked into the form of any inftrument prepared for war by land or by fea, shall not be reputed contraband, much lefs fuch as have been already wrought and made up for any other use; all which shall be wholly reckoned among free goods; as likewife all other merchandizes and things which are not comprehended, and particularly mentioned in the foregoing enumeration of contraband goods, so that they may be transported and carried in the freest manner by the subjects of both parties, even to places belonging to an enemy, such towns or places being only excepted as are at that time belieged, blocked up, or invested. And except the cases in which any ship of war, or iquadron shall, in consequence of storms or other accidents at les, be under the necessity of taking the cargo of any trading veffel or veffels, in which case they may stop the laid veffel or veffels, and furnish themselves with necessaries, giving a receipt in order that the power to whom the faid thip of war belongs may pay for the articles to taken, according to the price thereof at the port to which they may appear to have een destined by the ship's papers; and the two contracting parties engage, that the veffels shall not be detained longer than may be absolutely necessary for their faid ships to supply themfelves with necellaries; that they will immediately pay the value of the receipts, and indemnify the proprietor for all luffes which he may have fuffained in confequence of fuch transiction.

Art. XVII. To the end that all manner of differtions and quarrels may be avoided and prevented on one fide and on the other, it is agreed, that in case either of the parties should be engaged in a war, the ships and verifies subjects or people of the other party, must be sea letters of passports, expressing the name.

wife be

of the salfo the name and place of habitation of the mafter to mander of the faid thip, that it may appear thereby that it preally and truly belongs to the subjects of one of the which passport shall be made out and granted according to be form annexed to this treaty. They shall like

d every year, that is, if the ship happens to re-

turn t within the space of a year. wife agreed, that fuch thips being laden, are to be It 15 or only with paffports as above-mentioned, but also provide with certif es, containing the feveral particulars of the care, that so it may be known the place whether a and goods be on board the fame; which . made out by the officers of the place wh a the accustomed form; and if any one should ifable to express in the faid certificates the p goods on board belong, he may do fo; wi tes they may be fent to one of the ports of ng party, and adjudged by the competent tribunal, according to what is above let forth, that all the circumitances of this omittion having been well examined, they shall be adjudged to be legal prizes, unless they shall give legal fatisfaction of their property by tellimony equally equivalent.

Art. XVIII. If the ships of the said subjects, people or inhabitants of other of the pattice shall be mot with, either sailing a ng the coulds or on the high seas, by any ships of war or the other, or by any privateer, the said ship of war or privateer, for averding any omerder, shall remain out of cannon short, and may sent their boats on board the merchant saip which they shall so meet with, and may enter her to the number of two or three men also, to whom the master or communication in the season should exhibit his pussports concerning to pa perty of the map made out according to the summercial in this present strategy and the ship, when she shall said it was such pusses it shall not be living to moleth or give his took as my manner, or since her to quit her intended course.

Art. The experiment has been opened by established with the countries are power with a those of the most favoured nationary to be the point with a their confuls reside or are permitted to the

I. V. Is it allongued that the inhabitants of the terms of a solution of each party shall be perfittedly have free access to the course of particle of the closes, and clay shall be permitted to

profecute fuits for the recovery of their property, the payment of their debts, and for obtaining fatisfaction for the damages which they have fuffained, whether the perfons whom they may fue be fubjects or citizens of the country in which they may be found, or any other perfons whatever who may have taken refuge therein; and the proceedings and fentences of the faid courts shall be the same as if the contending parties had been subjects or citizens of the faid country.

Art. XXI. In order to terminate all differences on account of the loffes fuffained by the citizens of the United States, in confequence of their velfels and cargoes having been taken by the subjects of his Catholic Majesty during the late war between Spain and France, it is agreed that all such rases shall be referred to the final decision of commissioners to be appointed in the following manner: His Catholic Majesty shall appoint one commillioner, and the Prefident of the United States, by and with the advice and confent of the Senate, shall appoint another, and the faid two commissioners shall agree on the choice of a third, or if they cannot agree so, they shall each propose one person, and of the two names so proposed, one shall be drawn by lot in the presence of the two original commissioners, and the person whose name shall be drawn shall be the third commillioner; and the three commissioners to appointed shall be Iworn impartially to examine and decide the claims in question, according to the merit of the feveral cases, and to justice, equity, and the laws of nations. The faid commissioners shall meet and fet at Philadelphia; and in case of death, sickness or necesfary ablence of any fuch commissioner, his place shall be supplied in the fame manner as he was first appointed, and the new commissioner shall take the same oaths, and do the same duties. They shall receive all complaints and applications, authorized by this article, during eighteen months from the day on which they fhall affemble. They shall have power to examine all such perfons as come before them on oath or affirmation, touching the complaints in question, and also to receive in evidence all written testimony, authenticated in such a manner as they shall think proper to require or admit. The award of the faid commissioners, or of any two of them, shall be final and conclusive, both as to the justice of the claim and the amount of the sum to be paid to the claimants; and his Catholic Majesty undertakes to cause the same to be paid in specie, without deduction, at such time and places, and under fuch conditions as shall be awarded by the same commissioners.

Art. XXII. The two high contracting parties hoping that the good correspondence and friendship which happily reigns between them, will be further increased by this treaty, and that it will contribute to augment their prosperity and opulence, will in future give to their mutual commerce, all the extension and favour which the advantages of both countries may require.

And in confequence of the stipulations contained in the fourth article, his Catholic Majesty will permit the citizens of the United States, for the space of three years from this time, to deposit their merchandizes and effects in the port of New-Orleans, and to export them from thence, without paying any other duty than a fair price for the hire of the stores; and his Majesty promises, either to continue this permission, if he sinds, during that time, that it is not prejudicial to the interests of Spain; or if he should not agree to continue, he will assign to them on another part of the banks of the Mississippi, an equivalent establishment.

Art. XXIII. The present treaty shall not be in force until ratified by the contracting parties; and the ratifications shall be exchanged in six months from this time, or sooner, if possible.

In witness whereof we the underwritten Plenipotentiaries of his Catholic Majesty, and of the United States of America, have signed this treaty of friendship, limits, and navigation, and have thereinto assixed our seils respectively.

Done at Sin Lorenzo et Real, this feven and twentieth day of Oftober, 4795.

THOMAS PINCKNEY, (1. s.)
PRINCE DE LA PAZ. (1. s.)

TREATY OF

AMITY AND COMMERCE,

CONCLUDED BETWEEN

41S MAJESTY THE KING OF SWEDEN, AND THE UNITED STATE S
OF NORTH-AMERICA.

HE King of Sweden, of the Goths and Vandals, &c. &c. &c. and the Thirteen United States of North-America, to wit, New Hamp thire, Massachuletts-Bay, Rhode-Island, Connecticut, New York, New-Jersey, Pennsylvania, the counties of Newcassle Kent and Sussex on Delaware, Maryland, Virginia, North-

Carolins, South-Carolina, and Georgia, defiring to establish in a stable and permanent manner the rules which ought to be obferved relative to the correspondence and commerce which the
two parties have judged necessary to establish between their respective countries, states and subjects, his Majesty and the United
States have thought that they could not better accomplish that
end than by taking for a basis of their arrangements the mutual
interest and advantage of both nations, thereby avoiding all those
burthensome preferences, which are usually sources of debate,
embarrassment and discontent, and by leaving each party at liberty to make, respecting navigation and commerce, those interior regulations which shall be most convenient to itself,

With this view, his Majesty the King of Sweden has nominated and appointed for his planipotentiary, Count Gustavus Philip de Creutz, his ambassador extraordinary to his Most Christian Majesty, and knight commander of his orders; and the United States, on their part have fully empowered Benjamin Franklin, their minister plenipotentiary to his Most Christian Majesty: The said plenipotentiaries, after exchanging their full powers, and after mature deliberation in consequence thereof, have agreed upon, concluded and figured the following articles:

Article I. There shall be a firm, inviolable and universal peace and a true and sincere friendship between the King of Sweden, his heirs and successors, and the United States of America, and the subjects of his Majesty and those of the said States, and between the countries, islands, cities, and towns situated under the jurisdiction of the King and of the said United States, without any exception of persons or places; and the conditions agreed to in this present treaty, shall be perpetual and permanent between the King, his heirs and successors, and the said United States.

Art. II. The King and the United States engage mutually, not to grant hereafter any particular favour to other nations in refpect to commerce and navigation, which shall not immediately become common to the other party, who shall enjoy the same favour freely, if the concession was freely made, or on allowing the same compensation, if the concession was conditional.

Art. III, The subjects of the King of Sweden shall not pay in the ports, havens, roads, countries, islands, cities and towns of the United States, or in any of them, any other nor couties or imposts of what nature soever they may be, which the most favoured nations are or shall be of and they shall enjoy all the rights, liberties, privaties and exemptions in trade, navigation and the said nations do or shall enjoy, whether in passing from one port to another of the United States, or is going to or from the same, from or to any part of the world whatever.

Art. IV. The subjects and inhabitants of the faid United States shall not pay in the ports, havens, roads, islands, cities and towns, under the dominion of the King of Sweden, stay other or greater duties or imposts of what nature soever they may be, or by what name soever called, than those which the most favoured nations are or shall be obliged to pay; and they shall enjoy all the rights, liberties, privileges, immunities and examptions in trade, navigation and commerce, which the fait intions do or shall enjoy, whether in passing from one port to another of the dominion of his faid Majesty, or in going to or them the same, from or to any part of the world whatever.

Art. V. There shall be granted a full, perfest and entire liberty of conscience to the inhabitants and subjects of each party, and no person shall be molested on account of his worship, provided he submits so far as regards the public demonstration of it to the laws of the country. Moreover, liberty shall be granted, when any of the subjects or inhabitants of either party die in the territory of the other, to bury them in convenient and decent places, which shall be assigned for the purpose; and the two contracting parties will provide each in its jurisdiction, that the subjects and inhabitants respectively may obtain certificates of the death, in case the delivery of them is required.

Art. VI. The subjects of the contracting parties in the respective States, may freely dispose of their goods and effects either by tellament, donation or otherwise in favour of such persons as they think proper; and their heirs in whatever place they shall refide, shall receive the succession even ab intestate either in perfon or by their attorney, without having occasion to take out letters of naturalization. These inheritances, as well as the capitals and effects, which the subjects of the two parties, in changing their abode, shall be desirous of removing from the place of their abode, shall be exempted from all duty called "droit de detraftion," on the part of the government of the two fluts respectively. But it is at the same time agreed, that nothing contained in this article shall in any manner derogate from the ordinances published in Sweden against emigrations, or which may hereafter be published, which shall remain in full force and vigour. The United States on their part, or any of them, shall be at liberty to make respecting this matter, such laws as they think proper.

Art. VII. All and every the subjects and inhabitants of the kingdom of Sweden, as well as those of the United States, shall be permitted to navigate with their vessels in all safety and freedom, and without any regard to those to whom the merchandize and cargoes may belong, from any port whatever, and the subjects and inhabitants of the two states shall likewise be permitted to fail and trade with their vessels, and with the same liberty and fafety to frequent the places, ports and havens of powers, enemies to both or either of the contracting parties, without being in any wife molested or troubled, and to carry on a commerce not only directly from the ports of an enemy to a neutral port, but even from one port of an enemy, to another port of an enemy, whether it be under the jurisdiction of the same or of different princes. And as it is acknowledged by this treaty with respect to ships and merchandizes that free ships shall make the merchandizes free, and that every thing which shall be on board of ships belonging to subjects of the one or the other of the contracting parties, shall be considered as free, even though the cargo or a part of it should belong to the enemies of one or both; it is nevertheless provided that contraband goods shall always be excepted; which being intercepted, shall be proceeded against according to the spirit of the sollowing articles. It is likewise agreed, that the same liberty be extended to persons who may be on board a free ship, with this effect that although they be enemies to both or either of the parties, they shall not be taken out of the free ship, unless they are soldiers in the actual fervice of the said enemies.

Art. VIII. This liberty of navigation and commerce shall extend to all kinds of merchandizes except those only which are expressed in the following article and are distinguished under the name of contraband goods.

Art. IX. Under the name of contraband or prohibited goods, shall be comprehended arms, great guns, cannon balls, arquebuses, musquets, mortars, bombs, petards, grenadoes, faucisses, pitch, balls, carriages for ordnance, musquet rests, bandoliers, cannon powder, matches, salt-petre, sulpher, bullets, pikes, sabres, swords, morions, helmets, cuirasses, halberds, javelins, pistols and their holsters, belts, bayonets, horses with their harness, and all other like kind of arms and instruments of war for the use of troops.

Art. X. These which follow shall not be reckoned in the number of prohibited goods, that is to say all forts of cloths, and all other manufactures of wool, slax, silk, cotton or any other materials, all kinds of wearing apparel together with the things of which they are commonly made; gold, silver coined

or uncoined, brafs, iron, lead, copper, latten, coals, wheat, barley, and all forts of corn or pulle, tobacco, all kinds of spices, talted or smoaked flesh, salted fish, cheese, butter, beer, ol, wines, fugar, all forts of falt and provisions which serve for the nourishment and sustenance of man; all kinds of cotton, hemp, slax, tar, pitch, ropes, cables, fails, sail-cloth, anchors, and any parts of anchors, thip matts, planks, boards, beams and all forts of trees and other things proper for building or repairing thips; nor thall any goods be confidered as contrabend, which have not been worked into the form of any inftrument or thing for the purpose of war by land or by sea, much less fuch as have been prepared or wrought up for any other use, All which shall be reckoned free goods, as likewise all others which are not comprehended and particularly mentioned in the foregoing article; to that they shall not by any pretended interpretation be comprehended among prohibited or contraband goods; on the contrary they may freely be transported by the subjects of the king and of the United States, even to places belonging to an enamy, such places only excepted as are befleged, bly hel or inveiled, and those places only shall be confriered as fuch, which are nearly furrounced by one of the budigerant powers.

Art. M. In order to avoid and prevent on both fides all difand discord, it is agreed that in case one of the parties P∷. the differenged in a war, the thips and veffels belonging to the for the bitants of the other shall be furnished with sealetters, or parisorts expressing the name, property and port of the veilel, and also the name and place of abode of the mafter or commander of the faid veffel, in order that it may thereby appear that the taid veffel really and truly belongs to the subjects of the one or the other party.-I hele paffports which shall be drawn up in good and due form, shall be renewed every time. the veffel returns home in the course of the year.—It is also agreed that the faid veffels when loaded shall be provided not only with fea-letters but also with certificates containing a particular account of the cargo, the place from which the veffel finled and that of her destination, in order that it may be known whither they carry any of the prohibited or contraband merchandizes mentioned in the ninth article of the present treaty; which certificates shall be made out by the officers of the place from which the veffel fluil depart.

Air. XII. Although the veffels of the one and the other party may ravigate finely and with all infety, as is explained in the leventh article, they thall nevertheless be bound at all times

AMITY AND COMMERCE.

503

when required to exhibit as well on the high seas as in port, their passports and certificates above mentioned. And not having contraband merchandizes on board for an enemy's port, they may freely and without hindrance pursue their voyage to the place of their destination. Nevertheless the exhibition of papers shall not be demanded of merchant ships under convoy of vessels of war, but credit shall be given to the word of the officer commanding the convoy.

Art. XIII. If on producing the faid certificates, it be discovered that the vessel carries some of the goods which are declared to be prohibited or contraband, and which are configned to an enemy's port, it shall not however, be lawful to break up the hatches of such ships, nor to open any chest, coffers, packs, casks or vessels, nor to remove or displace the smallest part of the merchandizes, until the cargo has been landed in the presence of officers appointed for the purpose, and until an inventory thereof has been taken; nor shall it be lawful to sell, exchange or alienate the cargo or any part thereof, until legal process shall have been had against the prohibited merchandizes, and sentence shall have passed declaring them liable to confiscation, saving nevertheless as well the ships themselves as the other merchandizes which shall have been found therein, which by virtue of this present treaty are to be effeemed free, and which are not to be detained on pretence of their having been loaded with prohibited merchandize, and much less confiscated as lawful prize. And in case the contraband merchandize be only a part of the cargo, and the mafter of the vessel agrees, consents and offers to deliver them to the vessel that has discovered them, in that case the latter, after receiving the merchandizes which are good prize, shall immediately let the vessel go, and shall not by any means hinder her from pursuing her voyage to the place of her destination. When a vessel is taken and brought into any of the ports of the contracting parties, if upon examination she be found to be loaded only with merchandizes declared to be free, the owner or he Who has made the prize, shall be bound to pay all costs and damages to the master of the vessel unjustly detained.

Art. XIV. It is likewise agreed, that whatever shall be found to be laden by the subjects of either of the two contracting paraties, on a ship belonging to the enemies of the other party, the whole effects, although not of the number of those declared contraband shall be confiscated as if they belonged to the enemy, excepting nevertheless such goods and merchandizes as were put on board before the declaration of war, and even six months after the declaration, after which term some shall be

prefumed to be ignorant of it, which merchandises that act is any manner be subject to confication, but shall be faithfully and specifically delivered to the owners, who shall claim or case them to be claimed before confication and fale, as also their proceeds, if the claim be made within eight months, and could not be made sooner after the sale, which is to be public: Provided nevertheless, that if the said merchandizes be contraband, it shall not be in any wife lawful to carry them afterwards to a port belonging to the enemy.

Art. AV. And that more effectual care may be taken for the fecurity of the two contracting parties, that they suffer no prejudice by the men of war of the other party or by privateers, all captains and commanders of ships of his Swedish Majesty and of the United States, and all their subjects, shall be forbidden to do any injury or damage to those of the other party, and if they aft to the contrary, having been found guilty on examination, by their proper judges, they shall be bound to make satisfaction for all damages and the interests thereof, and to make them good under pain and obligation of their persons and goods.

Art. XVI. For this cause, every individual who is defirous of fitting out a privateer, shall before he receives letters patent, or special commission, be obliged to give bond with sufficient sureties, before a competent judge, for a sufficient sum to answer all demages and wrongs which the owner of the privateer, his officers or others in his employ, may commit during the cruste, contrary to the tenor of this treaty, and contrary to the edicts published by either party, whether by the Ring of Sweden, or by the United States, in virtue of this same treaty, and also under the penalty of having the said letters patent and special commission revoked and made void.

Art. XVII. One of the contracting parties being at war, and the other remaining neuter, if it should happen that a merchant ship of the neutral power be taken by the enemy of the other party and be afterwards retaken by a ship of war or privateer of the power at war, also ships and merchandizes of what nature soever they may be, when recovered from a pirate or sea rover, shall be brought into a port of one of the two powers, and shall be committed to the custody of the officers of the said port, that they may be restored entire to the true proprietor as soon as he shall have produced full proof of the property. Merchants, masters and owners of ships, seamen, people of all sorts, ships and vessels, and in general all merchandizes and essess of one of the allies or their subjects, shall not be subject to any embargo, nor detained in any of the countries, territories, islands, cities,

common ports, rivers, or domains whatever, of the other ally, on account of any military expedition, or any public or private purpose whatever, by seizure, by force, or by any such manner; much less shall it be lawful for the subjects of one of the parties to seize or take any thing by force, from the subjects of the other party, without the consent of the owner. This however is not to be understood to comprehend seizures, detentions and arrests, made by order and by the authority of justice, and according to the ordinary course for debts or faults of the subject, for which process shall be had in the way of right according to the forms of justice.

Art. XVIII. If it should happen that the two contracting parties should be engaged in a war at the same time, with a common enemy, the following points shall be observed on both sides.

rst. If the ships of one of the two nations re-taken by the privateers of the other, have not been in the power of the enemy more than twenty-four hours, they shall be restored to the original owner on payment of one third of the value of the ship and cargo. If on the contrary, the vessel re-taken has been more than twenty-four hours in the power of the enemy, it shall belong wholly to him who has re-taken it.

2d. In case during the interval of twenty-four hours, a veffel be re-taken by a man of war, of either of the two parties, it shall be restored to the original owner on payment of a thirtieth part of the value of the vessel and cargo, and a tenth part of it has been re-taken after the twenty-four hours, which sums shall be distributed as a gratification among the crew of the men of war, that shall have made the re-capture.

3d. The prizes made in manner above mentioned, shall be restored to the owners after proof made of the property, upon giving security for the part coming to him who has recovered the vessel from the hands of the enemy.

4th. The men of war and privateers of the two nations shall reciprocally be admitted with their prizes into each others ports; but the prizes shall not be unloaded or fold there until the legality of a prize made by Swedish ships shall have been determined according to the laws and regulations established in Sweden, as also that of the prizes made by American vessels, shall have been determined according to the laws and regulations established by the United States of America.

5th. Moreover the King of Sweden, and the United States of America, shall be at liberty to make such regulations as they shall judge necessary respecting the conduct which their men of

war and privateers respectively shall be bound to observe with regard to vessels which they shall take and carry into the posts of the two powers.

Art. NIX. The thrus of war of his Swedish Majesty and those of the United States, and also those which their subjets shall have armed for war may with all freedom conduct the prizes which they shall have made from their enemies into the poirs which are open in time of war to other friendly nationa; and the aid prizes upon entering the faid ports, shall not be function are then tenure, nor shall the officers of the place take engine are of the values of the taid prizes which may direct and be enoughed freely and with all liberty to the places ported out in the committees, which the captains of the said veil is shall be briged to show.

Are N.V. In our arm wells bringing to either of the two States, or to their subjects, that be firinded, shipwrecked, or to der any other damage on the chasts or under the dominion of either of the number, all and and administre shall be given to the relies in mixture ked, or who may be in danger thereof, and policies in the growth to form the trains their return to their common to the Indian are more and are wronked, or their policies, and in the first income beautiful as englished in a year and contribution to the waters or that afteriors, shall be restored, and other more than a plant in the contribution of the laws and the contribution of the laws and the contribution of the laws.

A LANCE Movement of the two series likelihoods of the two en eine eine eine vollen, wiedere eine eine eine and equipped e con a companie of the companie, shall be forced community of the productions and it enemies, or by any series in the recommendation of the rivers, the same properties of the two pirties, they shall be had namen managed reness, and they 2 - 110 and they are the state of the same of the No. 15 ann. 1568 folks telleihments, prograntles for a con-and the continuing their voyage; prowhen I was a service of the service and they shall the service of progressive on the will be invitable at minamete.

A CANAL TO CONTROL OF THE CONTROL OF BOTH fides as well as the control of the con

to the merchants and subjects respectively on one side and the other, in order that they may withdraw with their effects and moveables, which they shall be at liberty to carry off or to sell where they please, without the least obstacle; nor shall any seize their effects, and much less their persons, during the said nine months; but on the contrary, passports which shall be valid for a time necessary for their return, shall be given them for their vessels, and the effects which they shall be willing to carry with them. And if any thing is taken from them, or if any injury is done to them by one of the parties, their people and subjects, during the term above-prescribed, full and entire satisfaction shall be made to them on that account. The above-mentioned passports shall also serve as a safe conduct against all insults or prizes which privateers may attempt against their persons and effects.

Art. XXIII. No subject of the King of Sweden shall take a commission or letters of marque for arming any vessel to act as a privateer against the United States of America, or any of them, or against the subjects, people or inhabitants of the said United States, or any of them, or against the property of the inhabitants of the said States, from any prince or State whatever, with whom the said United States shall be at war. Nor shall any citizen, subject or inhabitant of the said United States, or any of them, apply for or take any commission or letters of marque for arming any vessel to cruise against the subjects of his Swedish Majesty, or any of them, or their property, from any prince or State whatever with whom his said Majesty shall be at war. And if any person of either nation shall take such commissions or letters of marque, he shall be punished as a pirate.

Art. XXIV. The vessels of the subjects of either of the parties coming upon any of the coasts belonging to the other, but not willing to enter into port, or being entered into port and not willing to unload their cargoes or to break bulk, shall not be obliged to do it, but on the contrary shall enjoy all the franchises and exemptions which are granted by the rules subsisting with respect to that object.

Art. XXV. When a vessel belonging to the subjects and inhabitants of either of the parties, sailing on the high sea, shall be met by a ship of war or privateer of the other, the said ship of war or privateer, to avoid all disorder, shall remain out of cannon shot, but may always send their boat to the merchanes ship, and cause two or three men to go on board of here the master or commander of the said vessel shall port, stating the property of the vessel; and wi that! have exhibited her passport, the shall be at liberty to continue her vayage, and it shall not be lawful to molest or search her in any manner, or to give her chace or force her to quit her intended courfe.

Art. XXVI. The two contracting parties grant mutually the liberty of having each in the ports of the other, confuls, vice-centuls, agents and committaries, whole functions shall be regulated by a particular agreement.

Art. XXVII. The present treaty shall be ratified on both fides, and the ratifications shall be exchanged in the space of eight months, or somer if possible, counting from the day of the figurature.

In faith whereuf, the respective Plenipotentiaries have figued the above articles, and have thereunto affixed their seals,

Art. I. His Screen in Mojelly shall use all the means in his power to protect and defend the veilels and efficies belonging to congress or inhabit his of the United States of North-America, and every of them wilch shall be in the ports, havens, tokes, in nate iers near the countries, affinds, eities and towns, or his ind. Mojelly, and field use his utmelf endeavours to recover and relying to the right owners, all such veffels and exhibit, which shall be taken from them within his jurif-diction.

Ast. II. In the monner, the United States of North-America shall protest and defend the veilels and effects belonging to the

Subjects of his Swedish Majesty, which shall be in the ports, havens or roads, or on the seas near to the countries, islands, cities and towns of the said States, and shall use their utmost efforts to recover and restore to the right owners all such vessels and effects which shall be taken from them, within their jurisdiction.

Art. III. If in any future war at fea, the contracting powers resolve to remain neuter, and as such, to observe the strictest neutrality, then it is agreed, that if the merchant ships of either party, should happen to be in a part of the sea where the ships of war of the same nation are not stationed, or if they are met on the high sea, without being able to have recourse to their own convoys, in that case the commander of the ships of war of the other party, if required, shall in good saith and sincerity give them all necessary assistance, and in such case, the ships of war and frigates of either of the powers, shall protect and support the merchant ships of the other: Provided nevertheless, that the ships claiming assistance are not engaged in any illicit commerce contrary to the principles of the neutrality.

Art. IV. It is agreed and concluded that all merchants, captains of merchant ships, or other subjects of his Swedish Majefty, shall have full liberty in all places under the dominion or jurisdiction of the United States of America, to manage their own affairs and to employ in the management of them whomsoever they please; and they shall not be obliged to make use of any interpreter or broker, nor to pay them any reward unless they make use of them. Moreover, the masters of ships shall not be obliged in loading or unloading their vessels, to employ labourers appointed by public authority for that purpose; but they shall be at full liberty, themselves to load or unload their vessels, or to employ in loading or unloading them whomsoever they think proper, without paying reward under the title of falary to any other person whatever; and they shall not be obliged to turn over any kind of merchandizes to other vessels, nor to receive them on board their own, nor to wait for their loading longer than they please, and all and every of the citizens, people and inhabitants of the United States of America, shall reciprocally have and enjoy the same privileges and liberties in all places under the jurifdiction of the faid realm.

Art. V. It is agreed that when merchandizes shall have been put on board the ships or vessels of either of the contracting parties, they shall not be subjected to any examination: but all examination and search must be before lading, and the prohibited merchandizes must be stopped on the spot before they are

embarked, unless there is full evidence or proof of fraudulent practice on the part of the owner of the ship, or of him who has the command of her. In which case only he shall be responsible and subject to the laws of the country in which he may be. In all other cases neither the subjects of either of the contracting parties, who shall be with their vessels in the ports of the other, nor their merchandizes shall be seized or molested on account of contraband goods, which they shall have wanted to take on board, nor shall any kind of embarge be laid on their ships, subjects or citizens of the state whose merchandizes are declared contraband, or the exportation of which is forbidden, those only who shall have sold or intended to fell or alienate such merchandizes, being liable to punishment for such contravention.

. . . .

GEORGE WASHINGTON,

PRESIDENT OF THE UNITED STATES OF AMERICA.

To all whom these presents shall come, greeting.

HEREAS a Treaty of Peace and Amity has been concluded in the manner herein-after-mentioned, by the Plenipotentiary of the United States of America, and the Dey and Regency of Algiers; which Treaty, written in the Arabic inguage, being translated into the language of the United States is in the words following, to wit:

A Treaty of Peace and Amity concluded this prefent day lima artaly, the twenty-first of the Luna Saser year of the Hegira 1210, corresponding with Saturday the fifth of September, one thousand seven hundred and ninety sive, between Hassan Bashaw, Dey of Algiers, his Divan and subjects, and George Washington, Prefedent of the United States of North-America, and the citizens of the said United States.

Article I. From the date of the present Treaty, there shall subsist a sum and sincere peace and amity between the President and citizens of the United States of North-America, and Hassian Bashaw, Dey of Algiers, his Divan and subjects; the vasians and subjects of both nations reciprocally treating each other with civility, honour, and respect.

Art. II. All veffels belonging to the citizens of the United States of North-America, shall be permitted to enter the different ports of the Regency, to trade with our subjects, or any other persons residing within our jurisdiction, on paying the usual duties at our custom-house that is paid by all nations at peace with this Regency; observing, that all goods disembarked, and not fold here, shall be permitted to be re-embarked, without paying any duty whatever, either for disembarking or embarking. All naval and military stores, such as gun-powder, lead, iron, plank, sulphur, timber for building, tar, pitch, rosin, turpentine, and any other goods denominated naval and military stores, shall be permitted to be fold in this Regency, without paying any duties whatever at the custom-house of this Regency.

Art. 111. The vessels of both nations to pass each other without any impediment or molestation; and all goods, monies or passengers, of whatsoever nation, that may be on board of the vessels belonging to either party, shall be considered as inviolable, and shall be allowed to pass unmolested.

Art. IV. All ships of war, belonging to the Regency, on meeting with merchant vellels belonging to citizens of the United States, shall be allowed to visit them with two persons only befide the rowers; these two only permitted to go on board faid vessel, without obtaining express leave from the commander of faid vessel, who shall compare the passport, and immediately permit faid veffel to proceed on her voyage unmolested. All ships of war belonging to the United States of North-America, on meeting with an Algerine cruifer, and shall have feen her palfport and certificate from the Conful of the United States of North-America, refiding in this Regency, shall be permitted to proceed on her cruife unmolested : no passport to be issued to any thips but fuch as are absolutely the property of citizens of the United States; and eighteen months shall be the term allowed for furnishing the ships of the United States with passports.

Art. V. No commander of any cruifer belonging to this Regency, shall be allowed to take any person, of whatever nation or denomination, out of any vessel belonging to the United States of North-America, in order to examine them, or under pretence of making them confess any thing desired; neither shall they institt any corporal punishment or any way else molest them.

Art. VI. If any veiled belonging to the United States of North-America, shall be stranded on the coast of this Regency, they shall receive every possible assistance from the subjects of this Regency: all goods faved from the wreck shall be permitted to be re-embarked on board of any other velici, without paying any duties at the cuffern-house.

Art. VII. The Algerines are not, on any pretence whitever, to give or tell any welfel of war to any nation at war with the United States of North-America, or any velfel capable of cruifing to the detriment of the commerce of the United States.

Art. VIII. Any citizen of the United States of North-America, having bought any prize condemned by the Algerines, shall not be again captured by the crusters of the Regency then at sea, although they have not a passport; a certificate from the Consul resident be not deemed sufficient, until such time as they can procure such passport.

Art. IX. If any of the Barbary states at war with the United States of North-America, shall capture any American vessel, and bring her into any of the ports of this Regency, they shall not be permitted to fell her, but shall depart the port on procuring the requisite supplies of provision.

Art. X. Any vessel belonging to the United States of North-America, when at war with any other nation, shall be permitted to lead their prizes into the ports of the Regency, and have leave to ditto be of them, without paying any duties on sale thereof. An vest is wanting provisions or refreshments, shall be permitted to have them at market price.

Art. N.I. All thips of war belonging to the United States of Notice Area on, on anchoring in the ports of this Regency, shall receive the usual prefents of provisions and refreshments, gratis, to advance the flaves of this Regency make their escape on board tour will be, they shall be immediately returned: No excite first be made that they have hid themselves amongst the provide and cannot be found, or any other equivocation.

Air, XII. No current of the United States of America shall be onliged to be been any dive against his will, even should be the his brother ricement half the owner of a flive be forced to fell also equilate his wall; but all such agreements must be made by come of a parties. Should any American citizen be taken on the oran cremy's shop, by the cruders of this Regency, having a ree largest out, specifying they are citizens of the United States, they shall be immediately set at liberty. On the control of they have no pulport, they and their property shall be controlled by the repulse site.

Art. Art.f. bound any of the closess of the United States of Larth America, the within the house of this Regency, the Dorrer Too subjects built not interfere while the projecty of

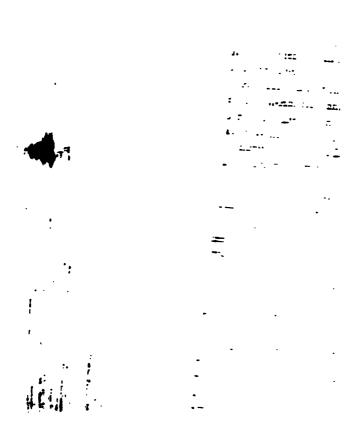

the deceased; but it shall be under the immediate direction of the Consul, unless otherwise disposed of by will. Should there be no Consul; the effects shall be deposited in the hands of some person worthy of trust, until the party shall appear who has a right to demand them, when they shall render an account of the property: neither shall the Dey or Divan give hindrance in the execution of any will that may appear.

Art. XIV: No citizen of the United States of North-America shall be obliged to purchase any goods against his will; but on the contrary, shall be allowed to purchase whatever it pleaseth him. The Consul of the United States of North-America, or any other citizen, shall not be amendable for dehts contrasted by any one of their own nation, unless previously they have given a written obligation so to do. Should the Dey want to freight any American vessel that may be in the Regency, or Turkey, said vessel not being engaged; in consequence of the friendship subsisting between the two nations, he expects to have the preserves given him, on his paying the same freight offered by any other nation.

Art. XV. Any dispute or suits at law, that may take place between the subjects of the Regency and the citizens of the United States of North-America, shall be decided by the Dey in person, and no other. Any disputes that may arise between the citizens of the United States, shall be decided by the Consul; as they are in such cases not subject to the laws of this Regency.

Art. XVI. Should any citizen of the United States of North-America kill, wound, or strike a subject of this Regency, he shall be punished in the same manner as a Turk, and not with more severity. Should any citizen of the United States of North-America, in the above predicament, escape prison, the Consul shall not become answerable for him.

Art. XVII. The Conful of the United States of North-America shall have every personal security given him and his household; he shall have liberty to exercise his religion in his own house. All slaves of the same religion shall not be impeded in going to said Consul's house, at hours of prayer. The Consul shall have liberty and personal security given him to travel whenever he pleases, within the Regency; he shall have free licence to go on board any vessel lying in our roads, whenever he shall think sit. The Consul shall have leave to appoint his own Drogaman and Broker.

To all to whom these presents shall come, or be made known,

Whereas the underwritten David Humphreys, hath been duly appointed Commissioner Plenipotentiary, by letters patent, under the signature of the President and seal of the United States of America, dated the 30th of March, 1795, for negociating and concluding a treaty of peace with the Dey and Governor of Algiers; whereas, by instructions given to him on the part of the Executive, dated the 28th of March and 4th of April, 1795, he had been further authorized to employ Joseph Donaldson, jun. on an agency in the said business; and whereas, by a writing under his hand and seal, dated the 21st of May, 1795, he did constitute and appoint Joseph Donaldson, junior, agent in the business aforesaid; and the said Joseph Donaldson, junior, did on the 5th of September, 1795, agree with Hassan Bashaw, Dey of Algiers, to keep the articles of the preceding treaty facred and inviolable.

Now KNOW YE, That I David Humphreys, Commissioner Plenipotentiary aforesaid, do approve and conclude the said treaty and every article and clause therein contained; reserving the same, nevertheless, for the final ratification of the President of the United States of America, by and with the advice and consent of the Senate of the said United States.

In testimony whereof I have signed the same with my hand and seal, at the city of Lisbon, the 28th of November, 1795.

DAVID HUMPHREYS.

Now BE IT KNOWN, That I George Washington, President of the United States of America, having seen and considered the treaty, do, by and with the advice and consent of the Senate, accept, ratify, and consirm the same, and every clause and article thereof. And to the end that the said treaty may be observed and performed with good faith on the part of the United States, I have ordered the premises to be made public; and I do hereby enjoin and require all persons bearing office, civil or military, within the United States, and all other citizens or inhabitants thereof, faithfully to observe and fulfil the said treaty, and every clause and article thereof.

In testimony whereof I have caused the seal of the United States of America to be affixed to these presents, and signed the same with my hand.

THE END

OF THE

GEOGRAPHY OF AMERICA.
